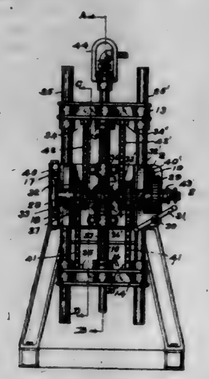
66. A material carrying, loading and unloading machine including in combination a frame, a shovel at the front of the frame, endless traction treads on either side of the frame, and to the rear of the shovel, and means for controlling the operation of the traction treads from a point distant from the machine.

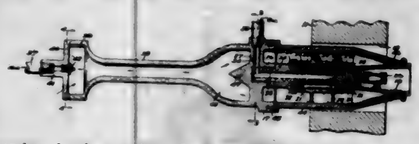
1,562,873. HIGH-SPEED ROTARY DRILLING MACHINE. FRANCIS HARLEY DAVIS, Monterey, Calif. Filed June 12, 1923. Serial No. 644,914. 3 Claims. (Cl. 255—22.)



2. In a drill of the kind described, a stationary supporting structure carrying a drill-head provided with a gate, the gate carrying free-ended vibratable feed-guides, independent spindle-carrying means freely engaging the said feed-guides and being adapted for up and down movement longitudinally therewith, said spindle-carrying means being provided with suitable feed element or elements engaging complimental element or elements carried by the drill-head, said engaging elements constituting a direction-changing means being adapted to impart regulative adjustment to the said spindle-carrying means longitudinally of the said vibratable feed-guides.

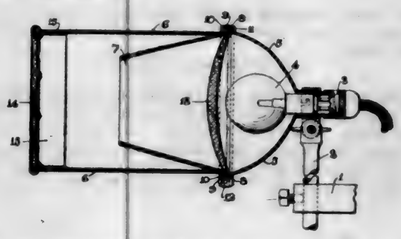
1,562,874. ROTARY OIL BURNER. HERBERT L. DELANEY, San Francisco, Calif., assignor to Bunting Iron Works, San Francisco, Calif., a Corporation of California. Filed May 8, 1923. Serial No. 637,483. 6 Claims. (Cl. 158—77.)

6. In an oil burner, an oil cup, a rotatable sleeve supporting the cup, vanes on said sleeve whereby a blast of gaseous fluid may serve to rotate the cup, a nozzle for confining the space around the vanes and for directing a blast beyond the end of the cup so as to project the fuel therefrom into a combustion chamber, a tubular member connected to the nozzle for providing a continuous passageway therewith, said tubular member having a flared end adjacent the nozzle, a deflector for directing the fluid blast into the annular space between the nozzle and the rotatable sleeve, said tubular



member having a free flaring end open to the atmosphere, a strap across this end, and means for releasing a stream of gaseous fluid under pressure into the tubular member, said means being supported on the strap.

1,562,875. AUTOMOBILE HEADLIGHT. HARRY F. DUBBEN and FRANK B. EASTON, New York, N. Y. Filed Oct. 17, 1924. Serial No. 744,168. 3 Claims. (Cl. 240—48.4.)

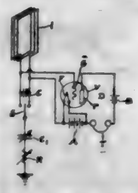


3. An automobile headlight containing, in combination, a concave reflector, a lamp located within the cavity thereof, and secured to the front thereof a guard compriaing two open-ended members fitting one within the other, the outer member having its interior blackened, and the inner member tapering and having its larger end fitted into and secured to the rear end of said outer member, the rear end of said guard being of the same cross-sectional size as said reflector.

1,562,876. TREATMENT OF FINELY-DIVIDED COAL AND THE PRODUCTION OF BRIQUETTES. EDWIN EDSER and WALTER HENRY BEASLEY, London, England, assignors to Minerals Separation North American Corporation, New York, N. Y. Filed July 29, 1922. Serial No. 578,477. 10 Claims. (Cl. 44—1.)

1. A process for the production of agglomerates of coal particles which consists in agitating coal of suitable fineness in an acidified pulp with a substance having normally no preferential affinity for the coal particles and adapted to serve as a binding medium, whereby the coal particles are agglomerated, and separating the resulting agglomerates from pulp liquid.

1,562,877. RADIO RECEIVING SYSTEM. WILLIAM G. ELLIS, Philadelphia, Pa. Filed June 16, 1922. Serial No. 568,827. 4 Claims. (Cl. 250—11.)

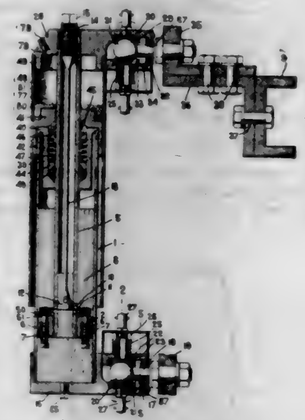


1. In a radio receiving system the combination of a loop or receptor, a tuning element therein, a detector connected to points of different potential of said tuning element, said detector being of a nature to create unbalanced electrical paths to ground from said points, and a compensating circuit including a resistance to compensate for said unbalanced grounding.

1,562,878. FOAM STABILIZER. NATHANIEL T. EWER, Swarthmore, Pa., assignor, by mesne assignments, to Amdyco Corporation, a Corporation of New York. Original application filed Dec. 18, 1923, Serial No. 681,429. Divided and this application filed Sept. 18, 1924. Serial No. 738,557. 5 Claims. (Cl. 23—11.)

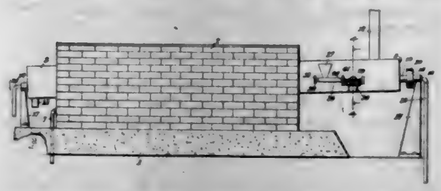
1. A foam stabilizer consisting of an extract of chestnut oak bark substantially free from tannin.

1,562,879. SHOCK ABSORBER. ERNST FLENTJE, Cambridge, Mass. Filed Dec. 29, 1924. Serial No. 758,637. 8 Claims. (Cl. 188—88.)



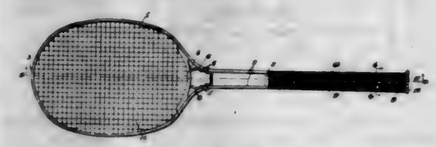
1. A shock absorber for automobiles comprising a cylinder, a valved piston therein having a piston rod, said cylinder having at one end a laterally-extending arm, a head secured to the end of the piston rod and provided with a laterally-extending arm, a stud extending horizontally from each arm, each stud having a ball-and-socket connection with its arm, and means for connecting one stud to the chassis of an automobile and the other stud to the axle thereof.

1,562,880. APPARATUS FOR REMOVING CHEMICALS FROM SOLIDS AND SEMISOLIDS. ANISE F. FRAME, South Charleston, W. Va. Filed Nov. 14, 1921. Serial No. 515,125. 1 Claim. (Cl. 203—6.)



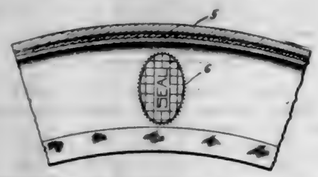
An apparatus of the class described, a stationary cylinder, a rotatable feed screw working in the lower portion of said cylinder and extending longitudinally thereof, a supporting structure for said cylinder, a feed hopper, a plurality of feed pipes connected to one another, one of said pipes receiving material from the hopper, another of said pipes serving to deliver the material to the upper end portion of the feed screw within said stationary cylinder, the first mentioned pipe connecting with the central portion of the second mentioned pipe, a spiral operating feed screw extending through said first mentioned pipe to provide for a constant feeding of the material to the second pipe, means for operating the last mentioned feed screw, a reciprocating feeding mechanism in the second mentioned pipe to cut off communication between the first and second mentioned pipes as the material is forced into said cylinder, and means for operating the reciprocating feeding mechanism.

1,562,881. TENNIS RACKET AND THE LIKE. FRANCIS WILLIAM GOWER, HUGH JAMES OWEN, and ROBERT JOHN NASH, Birmingham, England. Filed June 29, 1923. Serial No. 648,539. 6 Claims. (Cl. 273—73.)



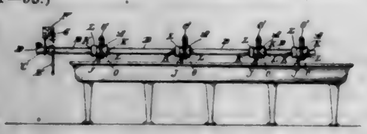
5. A tennis racket or the like, having in combination a frame and a handle formed from a single strip of solid section bar, having a central part of reduced section tapering from the ends, by bending said tapered strip to a bow formation and directing its extremities in parallel relation to constitute the handle, an arcuate spacing piece secured across the bow frame at its junction with the limbs of the handle, a wedge on said spacing piece, said wedge engaging said limbs and a wire striking face engaged with apertures in the frame and in the spacing piece.

1,562,882. ARTICLE GUARANTY. FREDERICK H. HAGNER, San Antonio, Tex. Filed June 12, 1924. Serial No. 719,672. 3 Claims. (Cl. 40—2.)



1. The process of marking tires consisting of forming indicia on the inside thereof in the soap stone coating usually found therein so that the indicia will be obliterated should the tire be run in a partially or totally uninflated position.

1,562,883. LIQUID-SOAP STORING AND DISPENSING APPARATUS. FREDERICK JOHN GEORGE HARDY, Norwalk, Conn., assignor to C. B. Dolge Company, Westport, Conn., a Corporation of Connecticut. Filed Mar. 9, 1920. Serial No. 364,498. 15 Claims. (Cl. 221—95.)

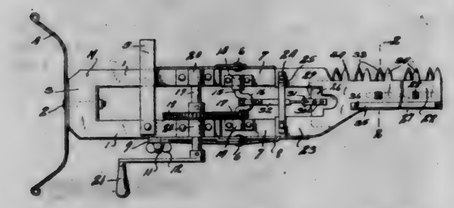


1. A liquid soap magazine comprising a sectional combined storage reservoir and supply duct, including a plurality of uniform sump sections each having an auto-

matic closing outlet, intermediate storage sections of lesser interior diameter than the interior diameter of the sump sections and constituting reservoirs and conductors of supply of liquid soap to the entire system, a filler section and a removable vented cap therefor, and means of support whereby said sections are held in horizontal position.

---

1,562,884. HEDGE TRIMMER. CHARLES HINES, South Richmond, Va. Filed May 26, 1925. Serial No. 33,024 4 Claims. (Cl. 30—11.)



1. A hedge trimmer comprising, in combination, a substantially U-shaped member, a body engaging yoke carried by the base portion of said member, arms pivotally connected with the arms of the U-shaped member, an outstanding plate carried by one of the first named arms and having an arcuate extension arm overlying an arm of the U-shaped member, coacting means carried by said arms of the U-shaped member and with the extension arms to hold the same in different selected adjustments, and a cutting mechanism carried by the second named arms.

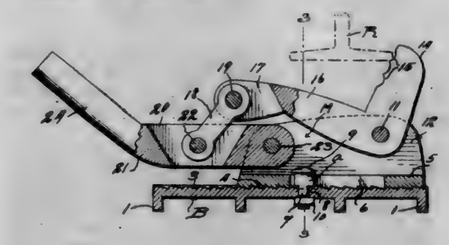
---

1,562,885. PROCESS OF PREPARING VISCOSE SOLUTIONS. ELIE S. HUMBOLDT, Oakland, Calif., assignor to The Pacific Lumber Company, San Francisco, Calif., a Corporation of Maine. Filed Nov. 26, 1923. Serial No. 677,179. 8 Claims. (Cl. 260—100.)

1. The process of preparing a viscose solution which includes ripening it by the application of heat, arresting the ripening by the application of a cold precipitating bath followed by redissolving the precipitate.

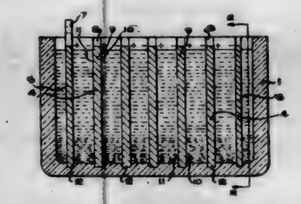
---

1,562,886. TRACK LINER. JOHN HUMPHREYS, Casper, Wyo. Filed July 23, 1925. Serial No. 45,637. 4 Claims. (Cl. 254—44.)



1. A rack liner comprising, in combination, a base plate provided with a rack on its upper surface, a channel member having its base wall provided with a teeth meshing with the rack of the base plate, said base wall of the member having a slot disposed in the same general direction as the rack of the base plate, a bolt disposed through the base plate and the slot of the member, the portion of the bolt within the slot being flattened to hold the member against turning movement about the bolt, a rail engaging lever pivotally supported by the member, and means for exerting pull upon said lever.

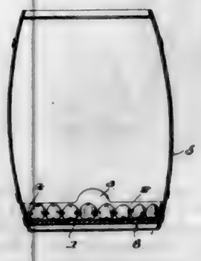
1,562,887. ELECTRIC STORAGE BATTERY. JOHN GRANT JACKSON, Chatham, Ontario, Canada. Filed Feb. 4, 1924. Serial No. 690,531. 1 Claim. (Cl. 136—10.)



In a multicellular electric storage battery, a single container of insulating material having a plurality of spaced apart slots in the side walls, the bottoms of the slots joined by slots in the bottom, a bipolar electrode plate inserted into each series of slots and sealed therein, said plate having positive and negative surfaces formed upon the opposed faces thereof and a conducting inactive substantially nonporous separating wall constituted between the positive and negative surfaces of the plate.

---

1,562,888. QUICK-PACING TRAY FOR FRUIT PACKING. JOHN TABB JANNEY, Martinsburg, W. Va. Filed July 5, 1923. Serial No. 649,647. 2 Claims. (Cl 217—8.)



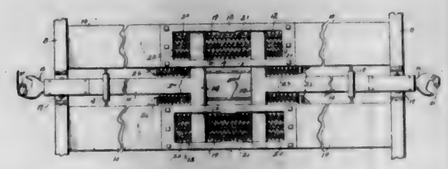
1. A facing tray for packaging fruit comprising a bottom portion adapted to constitute the top cover end disk and a non-collapsible annular side wall extending from the periphery of said bottom portion and adapted to confine the facing fruit against lateral displacement and prevent crushing of the fruit against a container side wall, said bottom portion being separable from said side wall, the combined bottom and side wall providing a tray sufficiently rigid to support without collapsing the weight of the facing layers of fruit while the tray is packed, lowered into a container and constantly thereafter until the container is opened.

---

1,562,889. SPRING-CUSHIONED DRAWBAR AND DRAWHEAD FOR RAILWAY CARS. TOM J. JOHNS, Cleveland, Ohio, assignor of one-fourth to Cleotra Osako, Casper, Wyo. Filed Aug. 12, 1924. Serial No. 731,612. 3 Claims. (Cl. 213—44.)

1. In a railway car, longitudinally extending sills, each sill having a longitudinally extending opening therein defined by upper and lower longitudinally extending members having inwardly and downwardly projecting shoulders, these shoulders constituting bumpers, draw bars extending inward from opposite ends of the car and each draw bar having a cross head extending transversely of the car and into the openings in the sills and between said longitudinally extending members and being

guided thereby, the extremities of each cross head operating between a bumper and the adjacent end walls of the sill openings, springs disposed between the ends of each



cross head and the adjacent end wall of the sill, and springs disposed between both cross heads, said springs acting to yieldingly resist movement of the cross heads in either direction.

---

1,562,890. ZIRCONIUM-OXIDE COMPLEX AND METHOD OF PRODUCING AND USING THE SAME. CHARLES J. KINZIE, Niagara Falls, N. Y., assignor to The Titanium Alloy Manufacturing Company, New York, N. Y., a Corporation of Maine. Filed Apr. 10, 1923. Serial No. 631,216. 14 Claims. (Cl. 106—38.2.)

1. The method of treating material composed preponderatingly of zirconia, but containing also undesired impurities which comprises mixing said material with a relatively small quantity of independently thereof covitrifiable ingredients, and heating the resulting charge until said impurities shall have been decomposed and eliminated therefrom.

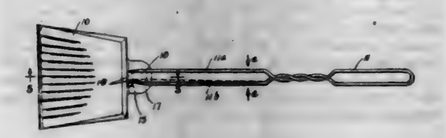
---

1,562,891. PROCESS FOR THE PRODUCTION OF POTASSIUM CARBONATE. HEINRICH KLOPSTOCK and WALTHER NEUMANN, Aussig-on-the-Elbe, Czechoslovakia. Filed July 21, 1924. Serial No. 727,347. 8 Claims. (Cl. 23—63.)

1. Process for the production of potassium carbonate of a desired degree of purity by treating a caustic potash solution of suitable strength with carbonic acid, according to which the carbonic acid treatment is incomplete so that a proportion of caustic potash, which is greater or less according to the degree of purity desired in the product, remains in solution in the mother-liquor, whereby impurities are to a certain extent retained, and the potassium carbonate is then separated in any suitable manner.

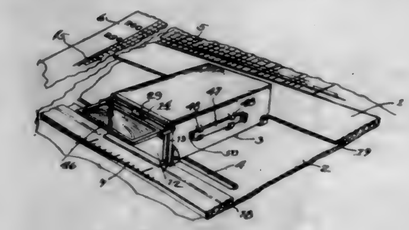
---

1,562,892. DUSTPAN. CONRAD W. KOEHTNER, Pearl City, Ill. Filed June 13, 1925. Serial No. 36,811. 3 Claims. (Cl. 65—20.)



1. In a dust pan, the combination with a carrier, of a handle having tiltable engagement therewith, a yoke mounted on the carrier to act as a guide and limit the tilting movement of said handle, and a locking catch formed in the yoke to govern the tilting movement aforesaid, said yoke extending rearward of the carrier, said handle being movable longitudinally of the yoke in course of tilting, said locking catch being arranged adjacent to said carrier, said handle comprising a pair of spaced arms for supporting the carrier, one of which is resiliently movable transversely of the yoke into engagement with said locking means.

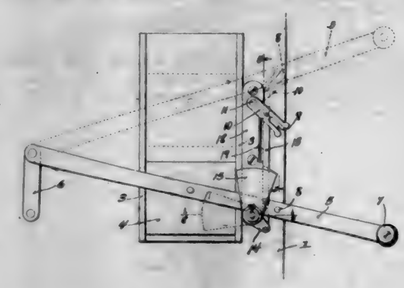
1,562,893. RECORDING MECHANISM. CHARLES C. KRUSE, Modesto, Calif. Filed June 30, 1923. Serial No. 648,855. 11 Claims. (Cl. 101—93.)



1. In a device of the character described, the combination of a base plate adapted to be placed in a measured position upon a sheet to be printed, said plate having a slot therein, a plurality of types mounted above the base plate, means for bringing any desired combination of said types into alinement above the slot, and means for depressing the selected types to form an imprint on the sheet therebeneath.

---

1,562,894. ICE-CREAM-SANDWICH MACHINE. ARTHUR C. LEICH and JESSE S. BERNER, Milwaukee, Wis. Filed Apr. 9, 1923. Serial No. 630,837. 1 Claim. (Cl. 107—1.)



An attachment for an ice cream sandwich machine having an open mouthed casing, said attachment comprising side guides adapted to be positioned upon opposite sides of the mouth of the casing, a knife carried in said side guide, a lever provided with a link at one end adapted for attachment to said machine, and pivoted intermediate its ends to said knife and adapted to raise and lower said knife, a side plate, a shutter pivoted adjacent the lower end of said side plate and adapted to occupy either a vertical or a horizontal position, said shutter when in its horizontal position being located in front of said open mouth, and shutter-operating mechanism normally disconnected from said lever and adapted to be engaged by said lever when said lever is in the upper portion of its stroke, said side plate having a cam adapted to lift said lever over said mechanism

---

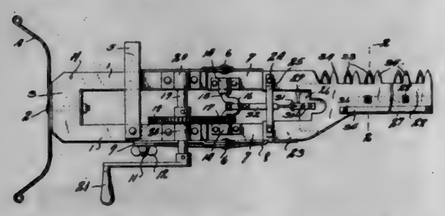
1,562,895. LOOP DOUBLER. WILLIAM L. LENGEL, Reading, Pa., assignor to The Nolde & Horst Co., Reading, Pa., a Corporation of Pennsylvania. Filed July 14, 1921. Serial No. 484,628. 6 Claims. (Cl. 66—32.)

1. In a loop doubler comprising a quill ring provided with a circular series of loop holding quill points and means for imparting determined rotative movements thereto; a picker carrier axially reciprocable toward

matic closing outlet, intermediate storage sections of lesser interior diameter than the interior diameter of the sump sections and constituting reservoirs and conductors of supply of liquid soap to the entire system, a filler section and a removable vented cap therefor, and means of support whereby said sections are held in horizontal position.

---

1,562,884. HEDGE TRIMMER. CHARLES HINES, South Richmond, Va. Filed May 26, 1925. Serial No. 33,024. 4 Claims. (Cl. 30—11.)



1. A hedge trimmer comprising, in combination, a substantially U-shaped member, a body engaging yoke carried by the base portion of said member, arms pivotally connected with the arms of the U-shaped member, an outstanding plate carried by one of the first named arms and having an arcuate extension arm overlying an arm of the U-shaped member, coacting means carried by said arms of the U-shaped member and with the extension arms to hold the same in different selected adjustments, and a cutting mechanism carried by the second named arms.

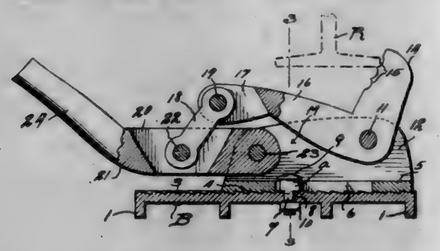
---

1,562,885. PROCESS OF PREPARING VISCOSE SOLUTIONS. ELIE S. HUMBOLDT, Oakland, Calif., assignor to The Pacific Lumber Company, San Francisco, Calif., a Corporation of Maine. Filed Nov. 26, 1923. Serial No. 677,179. 8 Claims. (Cl. 260—100.)

1. The process of preparing a viscose solution which includes ripening it by the application of heat, arresting the ripening by the application of a cold precipitating bath followed by redissolving the precipitate.

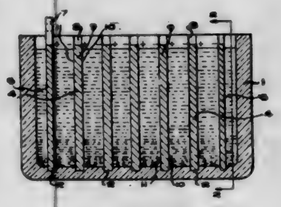
---

1,562,886. TRACK LINER. JOHN HUMPHREYS, Casper, Wyo. Filed July 23, 1925. Serial No. 45,637. 4 Claims. (Cl. 254—44.)



1. A track liner comprising, in combination, a base plate provided with a rack on its upper surface, a channel member having its base wall provided with a teeth meshing with the rack of the base plate, said base wall of the member having a slot disposed in the same general direction as the rack of the base plate, a bolt disposed through the base plate and the slot of the member, the portion of the bolt within the slot being flattened to hold the member against turning movement about the bolt, a rail engaging lever pivotally supported by the member, and means for exerting pull upon said lever.

1,562,887. ELECTRIC STORAGE BATTERY. JOHN GRANT JACKSON, Chatham, Ontario, Canada. Filed Feb. 4, 1924. Serial No. 690,531. 1 Claim. (Cl. 136—10.)



In a multicellular electric storage battery, a single container of insulating material having a plurality of spaced apart slots in the side walls, the bottoms of the slots joined by slots in the bottom, a bipolar electrode plate inserted into each series of slots and sealed therein, said plate having positive and negative surfaces formed upon the opposed faces thereof and a conducting inactive substantially nonporous separating wall constituted between the positive and negative surfaces of the plate.

---

1,562,888. QUICK-FACING TRAY FOR FRUIT PACKING. JOHN TABB JANNEY, Martinsburg, W. Va. Filed July 5, 1923. Serial No. 649,647. 2 Claims. (Cl 217—8.)

1. A facing tray for packaging fruit comprising a bottom portion adapted to constitute the top cover end disk and a non-collapsible annular side wall extending from the periphery of said bottom portion and adapted to confine the facing fruit against lateral displacement and prevent crushing of the fruit against a container side wall, said bottom portion being separable from said side wall, the combined bottom and side wall providing a tray sufficiently rigid to support without collapsing the weight of the facing layers of fruit while the tray is packed, lowered into a container and constantly thereafter until the container is opened.

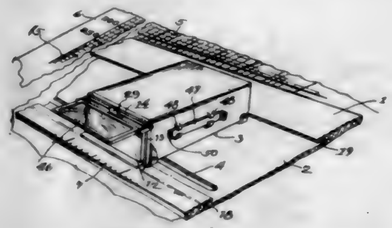
1,562,892. DUSTPAN. CONRAD W. KOERTNER, Pearl City, Ill. Filed June 13, 1925. Serial No. 36,811. 3 Claims. (Cl. 65—20.)

1. In a dust pan, the combination with a carrier, of a handle having tiltable engagement therewith, a yoke mounted on the carrier to act as a guide and limit the tilting movement of said handle, and a locking catch formed in the yoke to govern the tilting movement aforesaid, said yoke extending rearward of the carrier, said handle being movable longitudinally of the yoke in course of tilting, said locking catch being arranged adjacent to said carrier, said handle comprising a pair of spaced arms for supporting the carrier, one of which is resiliently movable transversely of the yoke into engagement with said locking means.

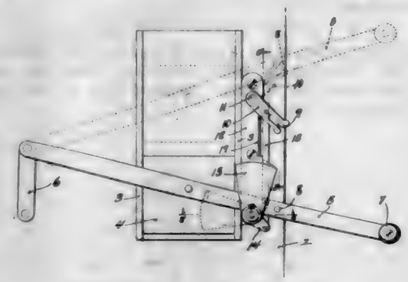
1,562,893. RECORDING MECHANISM. CHARLES G. KRUSE, Modesto, Calif. Filed June 30, 1923. Serial No. 648,855. 11 Claims. (Cl. 101—93.)



1. In a device of the character described, the combination of a base plate adapted to be placed in a measured position upon a sheet to be printed, said plate having a slot therein, a plurality of types mounted above the base pinte, means for bringing any desired combination of said types into alinement above the slot, and means for depressing the selected types to form an imprint on the sheet therebeneath.

---

1,562,894. ICE-CREAM-SANDWICH MACHINE. ARTHUR C. LEICH and JESSE S. BERNER, Milwaukee, Wis. Filed Apr. 9, 1923. Serial No. 630,837. 1 Claim. (Cl. 107—1.)



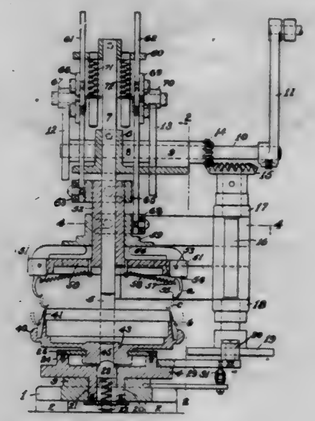
An attachment for an ice cream sandwich machine having an open mouthed casing, said attachment comprising side guides adapted to be positioned upon opposite sides of the mouth of the casing, a knife carried in said side guide, a lever provided with a link at one end adapted for attachment to said machine, and pivoted intermediate its ends to said knife and adapted to raise and lower said knife, a side plate, a shutter pivoted adjacent the lower end of said side plate and adapted to occupy either a vertical or a horizontal position, said shutter when in its horizontal position being located in front of said open mouth, and shutter-operating mechanism normally disconnected from said lever and adapted to be engaged by said lever when said lever is in the upper portion of its stroke, said side plate having a cam adapted to lift said lever over said mechanism

---

1,562,895. LOOP DOUBLER. WILLIAM L. LENGEL, Reading, Pa., assignor to The Nolde & Horst Co., Reading, Pa., a Corporation of Pennsylvania. Filed July 14, 1921. Serial No. 484,628. 6 Claims. (Cl. 66—32.)

1. In a loop doubler comprising a quill ring provided with a circular series of loop holding quill points and means for imparting determined rotative movements thereto; a picker carrier axially rtciprocable toward

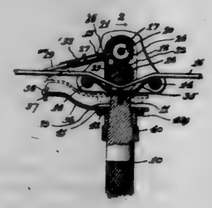
and away from said ring and provided with a radially movable loop-transferring picker hook; and separate cam mechanism for respectively reciprocating said carrier



and positively actuating said hook to effect reverse loop-engaging swings of the latter in successive carrier reciprocations.

---

1,562,896. COMBINED SAFETY RAZOR AND STROPPER. WILLIAM H. LISH, York, Pa. Filed July 10, 1922, Serial No. 574,025. Renewed May 4, 1925. 2 Claims. (Cl. 30—12.)

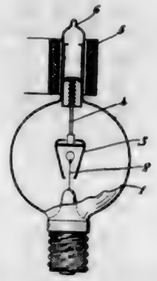


1. In a safety razor of the oscillating-blade type, a swinging blade-holder, a frame for supporting the same, a handle connected to the frame, a guard-plate mounted on the handle and capable of sliding thereon toward and from said frame, means for causing this sliding action back and forth, said guard-plate being provided with hooks turned upwardly and inwardly to adapt them to engage and interlock with the edge of the blade in the holder and also with a supporting surface adapted to guide the edge of the blade into said hooks when the blade is pushed toward the frame into shaving position.

---

1,562,897. ELECTRIC INCANDESCENT LAMP FOR PERFORMING SIGNALS OR FLASH LIGHT. KARL GUSTAV LISSEL, Stockholm, Sweden, assignor to Svenska Ackumulator Aktiebolaget Jungner, Stockholm, Sweden, a Corporation. Filed Aug. 15, 1924. Serial No. 732,302. 3 Claims. (Cl. 176—14.)

1. In an incandescent lamp, the combination of an extension of the lamp bulb, a magnetic armature movable within said extension and capable of being acted on by a magnet or solenoid located outside the lamp bulb, means for limiting the movement of said armature, and a screen connected to said armature and having a



substantially cylindrical shape, said screen being movable in its axial direction so as to enclose and disclose the filament, respectively.

---

1,562,898. WINDSHIELD CLEANER. BERNARD E. LITOT, Wilkinsburg, Pa. Filed Apr. 1, 1925. Serial No. 19,835. 5 Claims. (Cl. 15—253.)

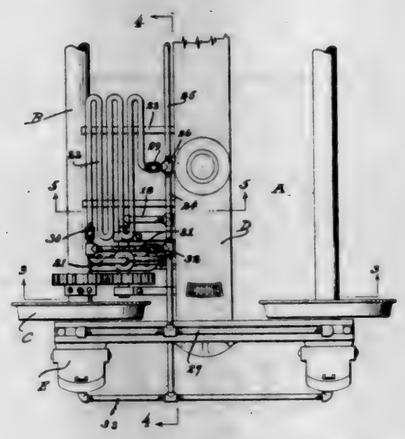
1. A wind shield cleaner comprising a casing, an oscillating shaft journalled in the casing, a motor carried by the casing, gearing interposed between the motor and said shaft for oscillating the shaft including a pinion loosely journalled on the shaft, the bore of the pinion being provided with a slot, a key for engaging the slot to lock the pinion against rotative movement upon the shaft, means for actuating the said key, and a cleaning element operatively connected to the shaft.

---

1,562,899. LUBRICATING SYSTEM FOR RAILWAY CARS. EDGAR L. LONG, Baltimore, Md. Filed Oct. 15, 1923. Serial No. 668,642. 2 Claims. (Cl. 184—7.)

1. The combination with the truck of a car including the axles and the journal boxes therefor; of a lubricating system associated therewith comprising a pump, a shaft extending transversely through said pump, a gear wheel mounted on the outer end thereof, an additional gear wheel mounted on one of said axles and adapted to mesh with said first mentioned gear wheel whereby said pump is driven simultaneously with the

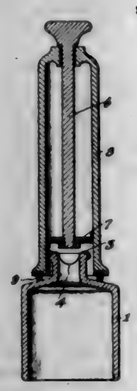
rotation of said axles, an oil delivery pipe connecting said pump to the journal boxes, a cooling coil associated with said delivery pipe, a by-pass pipe associated



with said delivery pipe, valves for said coil and said by-pass pipe, and a return pipe between said journal boxes and said pump.

---

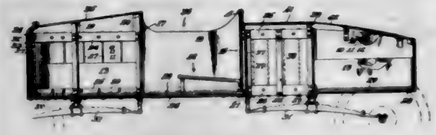
1,562,900. CUPPING APPARATUS. PAUL MAHIEU, Paris, France. Filed Nov. 3, 1921. Serial No. 512,470. 2 Claims. (Cl. 128—300.)



1. In a cupping device, a cupping vessel open at the bottom and having an open neck at the top, a flexible membrane over the neck opening adapted to be drawn partly into the neck under the influence of exterior atmospheric pressure and means outside of the area of contact of the membrane with the inside of the neck for permitting escape of air during the process of exhaustion.

---

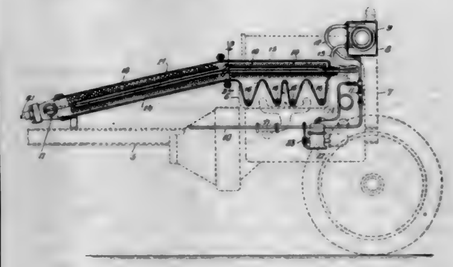
1,562,901. MOTOR ROAD VEHICLE. ARTHUR ROBERT MARKS, Strathfield, near Sydney, and WILLIAM ALEXANDER MOIR, Burwood, near Sydney, New South Wales, Australia. Filed Feb. 27, 1923. Serial No. 621,637. 4 Claims. (Cl. 296—31.)



1. In a vehicle of the character described, a body shell constructed of a continuous band of ply-wood laminæ, a bottom connected with the shell, a seat pit constructed of a continuous band of ply-wood laminæ arranged transversely and medially of the shell acting as a brace for the shell.

---

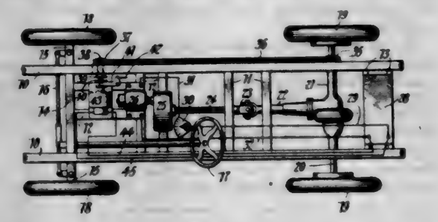
1,562,902. FUMIGATING APPARATUS. FLOYD J. METZGER, New York, N. Y., and JOSEPH D. NEULS, Los Angeles, Calif., assignors to California Cyanide Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 15, 1924. Serial No. 693,001. 14 Claims. (Cl. 43—125.)



1. In a fumigating apparatus the combination of a vehicle with an internal combustion engine to supply driving power therefor having an exhaust gas manifold and an extension thereof, heat exchangers in the manifold and extension, and means for delivering the medium to be vaporized successively to the heat exchangers in the extension and manifold whereby the maximum heating effect of the exhaust gases is utilized.

---

1,562,903. ELECTRICAL DRIVE FOR AUTOMOBILES. ADOLF MILLER, New York, N. Y. Filed June 16, 1924. Serial No. 720,175. 2 Claims. (Cl. 172—291.)

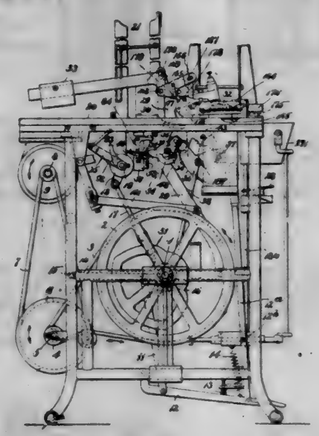


1. An electrical drive for automobiles comprising a battery, a motor carried on the automobile and directly geared with the rear axle thereof, a generator carried on the automobile, connections between the rear axle and said generator, and control means intervening in

said connections whereby the generator may be actuated when the automobile is moving down an incline and remain quiet at other times.

---

1,562,904. AUTOMATIC SELECTIVELY-OPERATED MECHANISM. FRANKLIN T. MILLER, Newton, Mass. Filed Jan. 26, 1925. Serial No. 4,809. 35 Claims. (Cl. 101—58.)



4. In an automatic selectively operating printing machine for use in connection with a plurality of control units having various individual physical characteristics, the combination of a printing member; a main drive shaft; actuating means for said member connected with said shaft; detecting means controlling the operation of said member by said actuating means and which is itself controlled by said units; means for presenting or feeding the units one at a time into position to be engaged by said detecting means, and means through which said shaft operates the detecting means independently of said actuating means to cause said detecting means to engage the units successively as they are presented to it so as to selectively control the actuation of said member according to the physical characteristics of said units.

5. In a machine of the character described the combination with a detector mechanism and means for operating the same, of a plurality of shuttles individually controlled by said detector mechanism; a plurality of levers each having one end thereof pivotally connected with one of said shuttles; a plurality of cams each cooperating with one of said levers intermediate its ends; means for operating said cams in timed relation to the operations of said detector mechanism; a spring connected with the opposite end of each lever so as to yieldingly urge the latter toward its cam, and a plurality of control members each connected with one of said shuttles.

19. In a machine of the character described, the combination of a printing member; means for operating said member; means for feeding stencil card control units one at a time into printing position; means through which said units automatically and selectively control the movements of said printing member according to the physical characteristics of said units; and means for feeding paper into printing position in timed relation with the movements of said member.

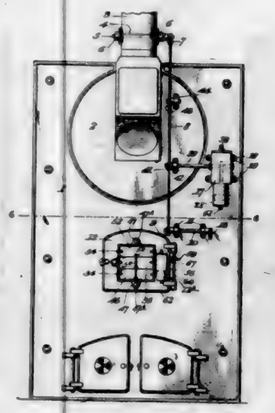
1,562,905. DOOR-OPERATED VALVE-CONTROLLED STACK DAMPER FOR FUEL-BURNING FURNACES. JOHN J. A. MILLER, Denver, Colo. Filed Dec. 7, 1922. Serial No. 605,468. 1 Claim. (Cl. 110—55.)

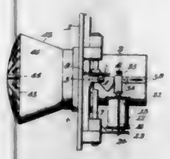
The combination with a furnace having a stack and a fire door, a rod pivotally mounted in the stack having a damper thereon, and a lever arm on one of its ends, a shaft on the furnace having a lever arm on one end and a rod connecting said lever arms; of a tappet on the other end of the shaft having an inclined edge terminating in a heel, said inclined edge being adapted to be engaged by the top edge of the door when the door is



opened, whereby the shaft is turned and the damper thereby opened, said tappet being turned by the door until its heel rests upon the edge of the door, whereby reverse movement of the mechanism is prevented while the door is open, and gravity means connected to the rod which connects the levers, whereby the damper is closed in a predetermined period after the door is closed.

---

1,562,906. LIQUID-CONTROLLED GRAVITY VALVE FOR USE WITH FURNACE OXIDATORS AND MECHANISM FOR OPERATING THE SAME. JOHN J. A. MILLER, Denver, Colo., assignor to The Automatic Furnace Oxidator and Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Jan. 15, 1923. Serial No. 612,790. 3 Claims. (Cl. 110—55.)

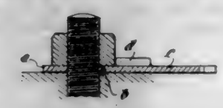


1. In an oil controlled gravity valve, an oil holding cylinder, a piston therein having a passage therethrough, a rod extending from said piston, a vertically adjustable stem extending through said rod and passage, a spring actuated valve slidably mounted on said stem below the entrance of said passage, to control the flow of oil through the same, a stop on said stem for defining the closing movement of said valve, means for raising the piston and rod, and means whereby said rod may be connected with a mechanism for moving the same.

---

1,562,907. SAFETY LOCKING DEVICE FOR USE WITH BOLTS, NUTS, AND THE LIKE. MONTAGUE VIVIAN MORGAN, London, England. Filed Oct. 6, 1923. Serial No. 666,940. 2 Claims. (Cl. 151—2.)

1. A nut lock comprising a washer having an aperture to receive a bolt, a ball housed in a recess in said washer, projecting from one surface of the washer and also projecting into the said aperture, said washer also having a tongue-like foldable extension arranged to be



doubled over the washer and shaped at its outer end to conform to the side of the nut on said bolt and against which said doubled extension bears.

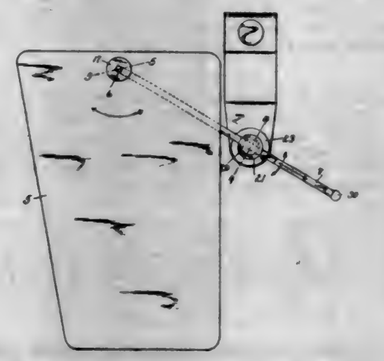
---

1,562,908. DEVICE FOR ATTACHING CHAINS TO LIFTING GEAR HOOKS AND THE LIKE. HERBERT MORRIS and JOSEPH ALEXANDER BUTTERWORTH, Loughborough, England, assignors to Herbert Morris Incorporated, Buffalo, N. Y., a Corporation of New York. Filed Apr. 17, 1924. Serial No. 707,311. 2 Claims. (Cl. 59—85.)

2. A device of the character described comprising a bifurcated member formed with a curved seat located between and at the lower extremities of the branches of the bifurcation, the upper free extremities of said branches being curved at the inner side to conjointly provide a second seat extending in a direction at right angles to the first mentioned seat, and means for holding the end link of a chain to the first mentionel seat with the next link of the chain engaging the second mentioned seat.

---

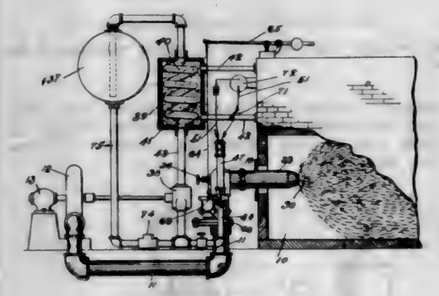
1,562,909. GLARESHIELD. GREGORY D. MORRISSEY, West Haven, Conn. Filed July 12, 1924. Serial No. 725,562. 1 Claim. (Cl. 296—97.)



A glare shield, comprising an angular sliding-bar threaded at one end, a flanged collar turned into said threaded end, a shield mounted on said collar, a spring-washer on each side of said shield, a nut applied to the end of the bar for producing friction upon the shield, a slotted post through which said sliding-bar extends, means for frictionally engaging the sliding-bar with the said post, a clamp with which said post is frictionally connected, and means for adjustably mounting the clamp.

---

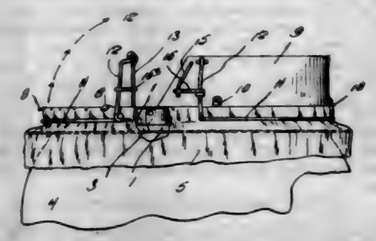
1,562,910. OIL BURNER. EDGAR L. NOCK, Edgewood, R. I. Filed July 17, 1924. Serial No. 726,645. 3 Claims. (Cl. 158—36.)



1. In a fuel feeding system having a fuel feeding conduit, a portion of which is helically formed, a casing surrounding said portion, a boiler, communicating means between the boiler and the casing, an auxiliary heating element within the conduit and means for controlling the heating element by the temperature of the boiler.

---

1,562,911. MILK STRAINER. GEORGE S. OTT, Exeland, Wis., assignor of one-third to Harry M. Bartlett, Exeland, Wis. Filed Apr. 11, 1925. Serial No. 22,418. 2 Claims. (Cl. 210—159.)



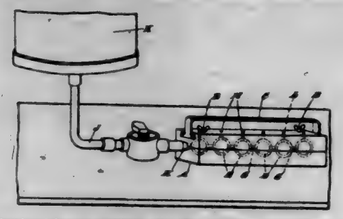
1. A strainer comprising a frame constructed to permit it to be placed upon the open top of a collection receptacle, said frame being made up of hingedly connected half-sections, a pair of clamping members adapted for disposition on the interior of the frame, said members being shaped to conform to said half sections, and clamping wires pivotally mounted upon said members and adapted to engage the exterior of said frame.

---

1,562,912. GOLF BALL AND METHOD OF MAKING THE SAME. ALBERT ERNEST PENFOLD, Birmingham, England, assignor to The Dunlop Rubber Company, Limited, Regents Park, London, England, a British Company. Filed Nov. 4, 1922. Serial No. 599,067. 6 Claims. (Cl. 18—55.)

1. The improvement in the method of forming the outer cover or shell of a golf ball having a rubber wound core,

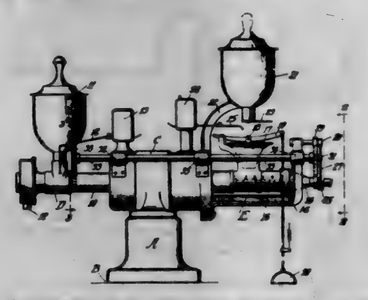
comprising shaping a solution of gutta percha to form a covering for the core, and preventing the solvent in



such solution from acting on the rubber windings of the core.

---

1,562,913. AUTOMATIC CANDY-MAKING AND PEANUT MACHINE. GEORGE FRANK PIERCE, Chicago, Ill. Filed Aug. 5, 1922. Serial No. 579,885. 2 Claims. (Cl. 107—14.)



2. A machine of the character described comprising, a motor and casing having a base, a mill secured to one end of the casing having a mixing feed worm connected to the end of the motor shaft and a tube at the mouth of the mill through which the mixed matter is forced into a continuous strip, a cutter shaft mounted on the side of the casing rotatably connected with the motor shaft at the other end of the casing, a bracket attached to the casing extending to the end of the mill tube and supporting the end of the cutter shaft, a cam mounted on the cutter shaft, a knife pivotally suspended at a point above the mill tube upon an extension of said bracket, a guide in which the lower end of the knife slidingly reciprocates, and a link extending from the cam to the knife to effect alternate rests and reciprocations of the knife past the tube to sever the strip into desired pieces.

---

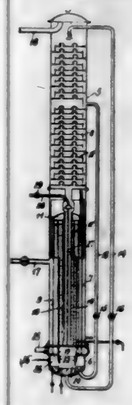
1,562,914. PROCESS FOR PRODUCING CARBON AND HYDROCYANIC ACID. ROBERT WADE POINDEXTER, Los Angeles, Calif., assignor, by mesne assignments, to California Cyanide Company, Inc., a Corporation of Delaware. Filed Dec. 4, 1922. Serial No. 604,794. 5 Claims. (Cl. 23—151.)

1. A process for the simultaneous production of carbon and hydrocyanic acid, which comprises mixing a hydrocarbon with ammonia and introducing the unheated mixture to an externally heated zone in which it is rapidly raised to the temperature of the reaction.

---

1,562,915. LIQUEFACTION OF GASES. CHARLES E. RECORDON, Elizabeth, N. J., and JOHN W. HILLE, Brooklyn, N. Y., assignors to Air Reduction Company, Incorporated, a Corporation of New York. Filed June 24, 1922. Serial No. 570,696. 10 Claims. (Cl. 62—122.)

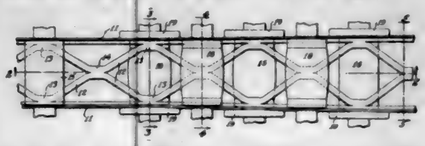
1. In an apparatus for liquefying gaseous mixtures, a vaporizer comprising two sets of tubes, a casing surrounding the tubes and adapted to contain a refrigerating liquid, a header connecting the upper ends of the tubes, a body below the vaporizer including two chambers communicating with the lower ends of the respective sets of tubes and adapted to receive the liquid formed therein,



means for supplying the gaseous mixture to one of the chambers and partition forming a common wall between the chambers whereby contamination of the liquid in the other chamber is avoided, said partition being capable of longitudinal expansion and contraction and maintaining nevertheless a gas tight seal.

---

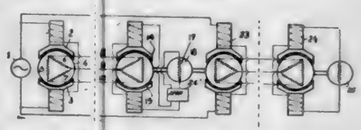
1,562,916. STRUCTURAL-ELEMENT MANUFACTURE. NORMAN C. RENDLEMAN, Dormont, Pa., assignor to Jones and Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1922. Serial No. 542,054. 10 Claims. (Cl. 104—6.6.)



1. In the manufacture of structural elements having continuous sides and angularly disposed web members connecting the sides, means for maintaining said sides in alinement and deflecting longitudinally separate portions of said web members out of the plane of alinement of said sides to pull them straight.

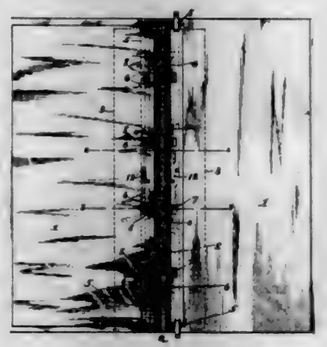
---

1,562,917. METHOD OF AND MEANS FOR INCREASING THE TURNING MOMENT IN INDICATING DEVICES. OSKAR RICHTER, Neumuhlen, near Kiel, Germany, assignor, to Anschütz & Co., Neumuhlen, near Kiel, Germany. Filed Mar. 11, 1925. Serial No. 14,846. 6 Claims. (Cl. 172—293.)



1. A device of the type described, comprising a stator, a rotor, windings for said rotor and stator, one of said windings having currents induced therein in accordance with the position of the rotor with respect to the stator; and a source of power inductively responsive to the said induced currents.

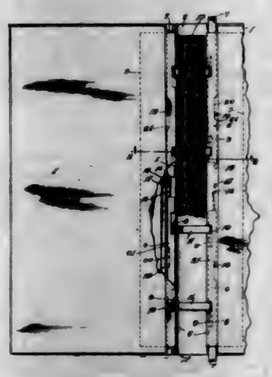
1,562,918. LOOSE-LEAF BOOK. ROBERT C. RUSSELL, Pittsburgh, Pa. Filed July 28, 1925. Serial No. 46,604. 9 Claims. (Cl. 129—24.)



1. In a loose leaf book, the combination with guide means, and cross links each having a perforated end portion, of a plurality of locking bars movable in the same guide means and provided with pins to engage the perforated end portions of said links, and means for locking said plurality of locking bars against relative movement in said guide means.

---

1,562,919. LOOSE-LEAF BOOK. ROBERT C. RUSSELL, Pittsburgh, Pa. Filed July 28, 1925. Serial No. 46,605. 4 Claims. (Cl. 129—24.)

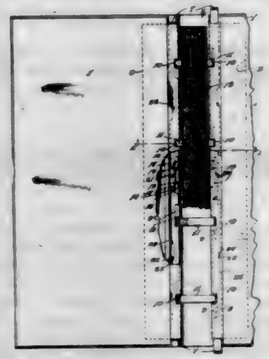


1. In a loose leaf book, the combination with guide means and cross links, of locking bars movable in said guide means and provided with means to engage the cross links, one of said locking bars having a spring finger and the other locking bar having rigid engaging means for said spring finger, whereby the locking bars may be locked against endwise withdrawing or releasing movement, and means whereby the locking bars may be released from each other.

---

1,562,920. LOOSE-LEAF BOOK. ROBERT C. RUSSELL, Pittsburgh, Pa. Filed July 28, 1925. Serial No. 46,606. 2 Claims. (Cl. 129—124.)

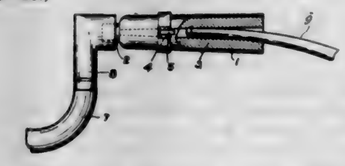
1. In a loose leaf book, the combination with guide means, and cross links, of a plurality of locking bars movable in the same guide means and provided with means to engage said cross links, locking means within the guide means to engage the inner end portions of adjacent locking bars in the same guide means and



lock the said bars from endwise withdrawing or releasing movement, and means to disengage said locking means from the plurality of locking bars.

---

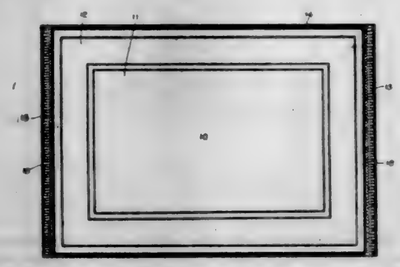
1,562,921. TOBACCO-PIPE CLEANER. JOHN HENRY SEWELL, Saskatoon, Saskatchewan, Canada. Filed Mar. 16, 1925. Serial No. 15,998. 6 Claims. (Cl. 131—18.)



1. A pipe cleaner comprising a tubular casing having a neck at one end, and a hollow insert of resilient material disposed in the interior of the casing.

---

1,562,922. FLOOR COVERING. SAMUEL J. SIEGEL, New York, N. Y., assignor to J. B. Campbell Manufacturing Co., Salem, N. J., a Corporation of New Jersey. Filed Apr. 3, 1925. Serial No. 20,449. 2 Claims. (Cl. 41—17.)



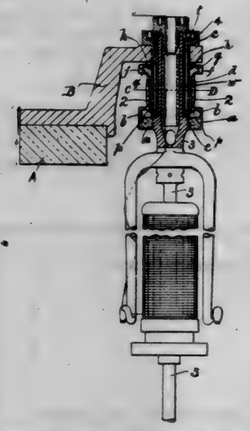
1. The process which comprises ornamenting floor covering of linoleum or the like to give the same the appearance of woven material by arranging the dominant unitary design in the form of disconnected design, predetermined markings spaced and shaped corresponding to a coarse weave fabric and interposing the intermediate spaces with contrasting background colors of the size and form corresponding to the apertures of a coarsely

woven fabric and applying background colors at the terminal portions at spaces interposed between contrasting portions of the unitary design to simulate a fringe and give depth to the same.

1,562,923. MEASURING DEVICE. JAMES G. SISSON, Athol, Mass. Filed May 15, 1922. Serial No. 560,993. 1 Claim. (Cl. 33—178.)

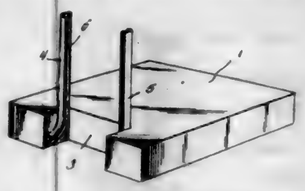
In a device of the character described, a tubular member, a head mounted on one end of said member, a shaft mounted in said tubular member, a cone arranged in said head and having its apex secured to said shaft, said head being provided with oppositely disposed threaded openings, bushings mounted in said openings, one of said bushings being provided with a threaded opening, a removable sizing rod arranged therein, the other of said bushings being provided with an opening, a plunger arranged therein and engaging said cone, a collar formed on said plunger adjacent said inner end, a spring surrounding said plunger and engaging said collar to oppose outward movement of said plunger, an interiorly threaded member arranged in the oposite end of said tubular member, said shaft being provided with a threaded portion engaging the threads of said member, and a cap carried by said shaft and arranged over the end of said interiorly threaded member, said threaded member and said cap being provided with indicia to permit calculation of the movement of said shaft and consequent projection of said plunger.

1,562,924. BEARING FOR THE SPINDLES OF FLIER SPINNING, DOUBLING, TWISTING, AND LIKE MACHINES. ALFRED STELL, Keighley, England. Filed Apr. 22, 1925. Serial No. 25,076. 2 Claims. (Cl. 118—57.)



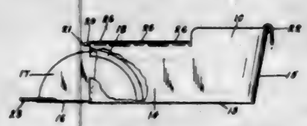
1. The combination with the spindle of a spinning or similar machine, of a wharle fixed upon the spindle and provided with an interior annular lubricant receiving cavity, the upper surface of which is inclined downward toward the spindle receiving bore, and a relatively stationary supporting sleeve surrounding the spindle and extending into said cavity in the wharle, said sleeve having a recess at its upper end and being provided with a plurality of ducts that extend from said recess through the end of the sleeve within the cavity in the wharle, for the purpose described.

1,562,925. DEVICE FOR BUNDLING LOOSE LEAVES. FRANK STREMER, Athens, Wis. Filed Oct. 22, 1924. Serial No. 745,222. 1 Claim. (Cl. 129—22.)



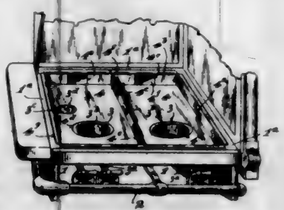
A device of the class described comprising a base provided at one end with a notch, and a pair of loose leaf receiving posts having outwardly and downwardly curved lower ends fastened to the opposed side walls of the notch and having their upper and intermediate portions disposed vertically and extending above the top of the base, said posts being of hollow form and provided in their opposed faces with the wire receiving slots.

1,562,926. ASH PAN. OLE SIVERTSEN, Jamestown, N. Y., assignor of one-half to Herbert Chiverton, Jamestown, N. Y. Filed May 26, 1923. Serial No. 641,741. 3 Claims. (Cl. 126—243.)



1. An ash pan adapted to be installed in the ash pit of a furnace to receive the ashes dropping through the grate and having a hinged front wall adapted to lie normally on the floor of the pit and permit the free passage of draft, said wall being raised when the ash pan is to be removed from the pit, and thus prevent the escape of ashes therefrom.

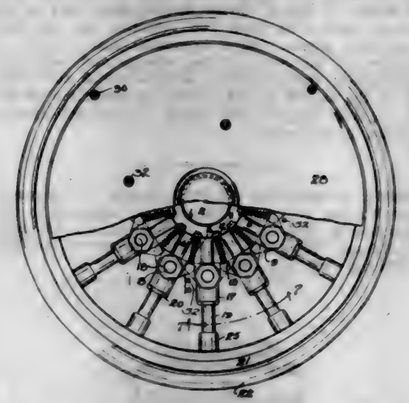
1,562,927. STOVE STRUCTURE. THOMAS E. TAYLOR, Mansfield, Ohio, assignor to The Tappan Stove Company, Mansfield, Ohio, a Corporation of Ohio. Filed Jan. 15, 1925. Serial No. 2,505. 12 Claims. (Cl. 126—39.)



1. A gas range, including in combination, a burner box provided with a pair of heat generating chambers terminating at their rear in a transversely extending flue, a closed cooking top covering said chambers, burners mounted in the forward ends of said chambers, and means for supplying secondary air solely to the base portions of said burners.

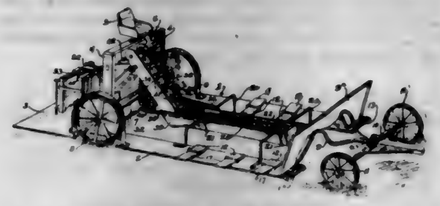
1,562,928. WHEEL. CLAUDE A. TOWE, Detroit, Mich. Filed Aug. 11, 1924. Serial No. 731,301. 6 Claims. (Cl. 152—47.)

3. A wheel comprising a hub having studs radiating therefrom, fulcrum blocks having holes in which said studs terminate, arranged in their inner faces, inner members extending outwardly from said hub and having said fulcrum blocks pivotally mounted thereon at



right angles to the radial direction of said members, and springs around said studs, in combination with outer members attached to said blocks and a rim.

1,562,929. POTATO-HANDLING DEVICE. ANDREW TROVATON, Thief River Falls, Minn. Filed May 9, 1923. Serial No. 637,760. 14 Claims. (Cl. 130—32.)



1. In a potato handling device, a wheeled vehicle having side platforms located close to the ground and adapted to straddle a row, said platforms being provided with padded members on which the pickers may kneel, each padded member having an outward extension which is adjustable to upright position to form a back when the padded member is used as a seat, a substantially horizontal conveyer supported midway between the platforms and spaced therefrom, and means for handling vegetables as they are delivered from the conveyer.

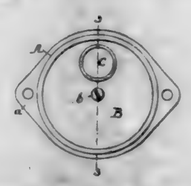
1,562,930. GUIDE FOR SEWING MACHINES. WALTER D. TURNER, Waco, Tex. Filed May 23, 1923. Serial No. 640,914. 8 Claims. (Cl. 112—139.)

1. A guide for use in forming seams comprising oppositely directed under and over plies, comprising a member S-shaped in cross section providing oppositely directed ply edge receiving channels, and a resilient element projecting into one of said channels and abutting one wall thereof in spaced relation to the base of the channel.

1,562,931. SHEARS. JOHN B. TITUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Oct. 11, 1923. Serial No. 667,827. 5 Claims. (Cl. 164—49.)

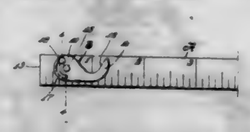
1. A shears for trimming the ends of metal sheets comprising a pair of housings adjustable with relation to each other, and having shear blades therein, a table to support a sheet between said housings, a gauge secured to the two housings, and calibrated to indicate the spacing between the shear blades of the two housings, and means for setting into operation the shear blades of both housings, said means comprising a common control member.

1,562,932. MOUNTING FOR THERMOSTATIC ELEMENTS. CHARLES BELL WALKER, Moseley, England. Filed Oct. 7, 1924. Serial No. 742,154. 2 Claims. (Cl. 200—139.)



1. A mounting for thermostatic circuit closing elements comprising a support, an insulator mounted upon said support, a hollow cylinder mounted on the insulator and having the end remote from the insulator recessed to provide spaced supporting points, an adjusting bolt passing through the support, insulator and cylinder, a thermostatic element having one end mounted on the adjusting bolt and supported on each side of said bolt by the spaced supporting points of the cylinder, and an adjusting nut on said bolt for pressing the portion of the thermostat between the supporting points into the recess of the thermostatic element.

1,562,933. MEASURING RULE. HENRY S. WALTER and CHRISTIAN BODMER, New Britain, Conn., assignors to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed May 29, 1925. Serial No. 33,785. 2 Claims. (Cl. 33—137.)



1. The combination with a measuring rule of a member pivoted to one side of said rule and having a finger provided with an edge in alinement with the end edge of said rule when said member is in operative position, said member having an arcuate slot, a pin pivotally connecting said member to said rule, and a pin carried by said rule and engaging in said slot for limiting the extent of pivotal movement of said member in each direction.

1,562,934. VALVE-SPRING LIFTER. ARTHUR J. WALTON, Takoma Park, D. C. Filed Mar. 31, 1925. Serial No. 19,673. 4 Claims. (Cl. 29—86.3.)

2. In valve spring lifters, a plate having a series of valve stem receiving slots along one edge, and a pair of

valve-cover-screw receiving slots along the same edge, an operating handle having provision to engage the opposite edge of said plate for the purpose of rocking the

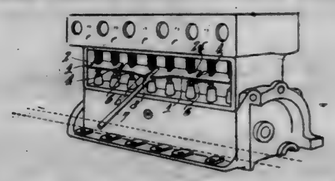


plate on said screws, said handle being movable laterally parallel to the plane of the plate as on a pivot for the purposes described.

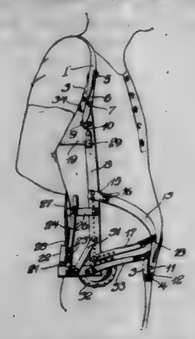
---

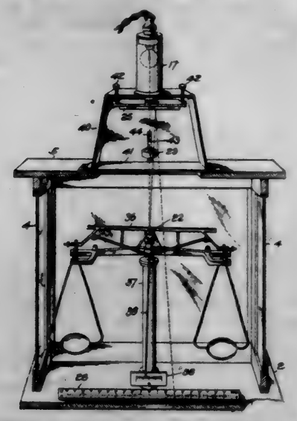
1,562,935. SURGICAL BRACE. ALLEN HAMMOND WHISNER, Greensboro, N. C. Filed Apr. 18, 1923. Serial No. 632,868. 10 Claims. (Cl. 128—78.)



1. In a surgical brace, means for affording three fulcra on the anterior surface of the body, one in front of each shoulder and one upon the pubic bone, means for gripping the dorsal section and for gripping the dorsal spine.

---

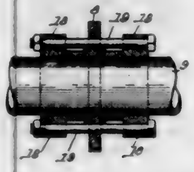
1,562,936. WEIGHING INSTRUMENT. ALFRED W. AINSWORTH, Denver, Colo. Filed Dec. 22, 1920. Serial No. 432,484. 3 Claims. (Cl. 265—54.)



1. The combination with a balance including a fulcrumed scale beam, of a source of light located above the center of the scale beam and having means for producing a vertical transversely linear beam of light, a mirror on the front of the scale beam at the center thereof in the path of the said beam of light, a lens interposed between the said mirror and the source of light to focus the transversely linear light beam onto said mirror, a second mirror located above and in advance of said scale beam and reflecting the reflection of the first mirror, and a graduated scale located at the front of the bases of the balance and positioned longitudinally thereof in the path in which the reflection of the second mirror travels by deflection of the scale beam to indicate the extent of said deflection in magnified measurement.

---

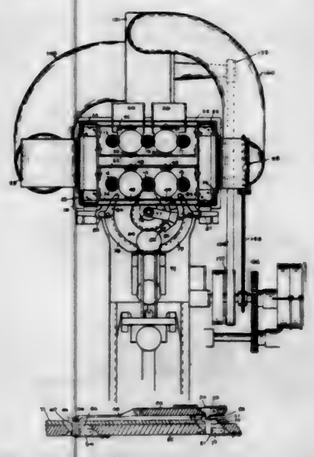
1,562,937. SPROCKET WHEEL. ELMER O. BEARDSLEY and WALTER F. PIPER, Chicago, Ill., assignors to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1923. Serial No. 652,890. 4 Claims. (Cl. 287—52.)



4. The combination of a sprocket ring formed of sections, a pair of collars provided with means for securing them to a shaft, bolts extending longitudinally through the collars and the ring to secure them together, driving lugs between the collars and the sides of the ring, and bevelled interlocking means between the collars and the ring sections to hold the latter on the shaft and against radial movement relatively thereto.

---

1,562,938. CAN-END DRIER. DAVID LOGAN BISSET, Montreal, Quebec, Canada, assignor to A. R. Whittal Can Company, Limited, Montreal, Quebec, Canada. Filed July 9, 1924. Serial No. 725,028. 30 Claims. (Cl. 34—11.)

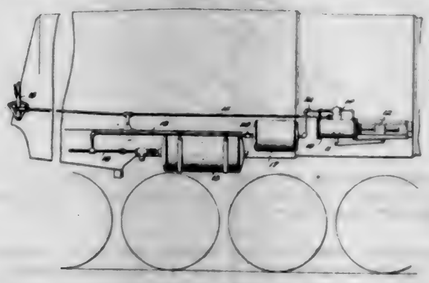


1. In a can end drier, a plurality of rotatable screw shafts having elevating and lowering threads adapted to raise the can ends from the feed and lower them to the delivery, and gear connections from shaft to shaft,

means for transferring the can ends at the upper end, a casing enclosing said screw shafts, means for driving said screw shafts, means for heating the interior of said casing and a feed mechanism introducing the can ends between the threads on the screw shafts.

---

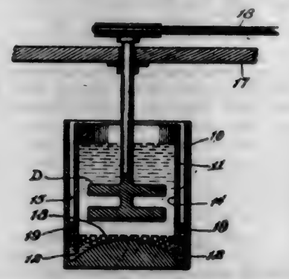
1,562,939. LOCOMOTIVE POWER REVERSE GEAR. ROBERT C. BURNS, Altoona, Pa. Filed May 28, 1923. Serial No. 642,055. 4 Claims. (Cl. 303—85.)



1. In combination, a pressure fluid motor for operating the power reverse gear mechanism of a locomotive, a compressed air system mounted on the locomotive, an auxiliary air reservoir adapted to receive and hold a reserve supply of compressed air to operate said motor in case of failure of the air system, a conduit for supplying compressed air from said system to said reservoir, means for preventing escape of the compressed air from said reservoir through said conduit upon drop of pressure in the inter, and a second conduit for supplying compressed air from said reservoir to said motor.

---

1,562,940. PRODUCTION OF SILICIC ACID. NEWELL L. COLLINS, Clarinda, Iowa. Filed Mar. 27, 1924. Serial No. 702,364. 5 Claims. (Cl. 204—9.)

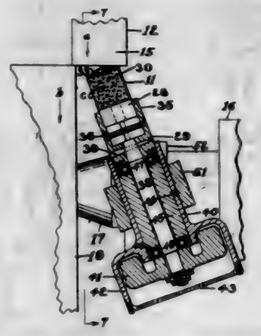


1. A process of producing pure silicic acid consisting in electrolyzing an aqueous solution of water glass between an anode and a mercury cathode and continuously agitating the anode.

---

1,562,941. ABRADING PENCIL. EDWARD R. CONNERS, Cincinnati, Ohio, assignor to The Precision Truing Machine and Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 6, 1921, Serial No. 498,732. Renewed Oct. 16, 1925. 4 Claims. (Cl. 125—37.)

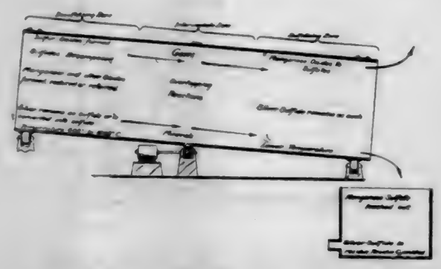
1. An abrading pencil having a short body of extreme hardness provided with an exposed cylindrical outer periphery and an axial bore, said cylindrical outer periphery and said bore being concentric, and a short band of softer material cast about the end of said short body and having a cylindrical outer periphery concentric with said first-named cylindrical outer periphery, said short band of softer material being of substantially less length than the length of said exposed cylindrical outer



periphery, and constructed and arranged for having a chuck provided with jaws concentric about said band in axial alinement with a shaft to which said chuck is secured.

---

1,562,942. PROCESS FOR TREATING MANGANESE-SILVER ORES. MELVILLE F. COOLBAUGH and JOHN BURNS READ, Golden, Colo., assignors to The Complex Ores Recoveries Company, Denver, Colo., a Corporation of Colorado. Filed Mar. 4, 1922. Serial No. 541,079. 15 Claims. (Cl. 75—18.)



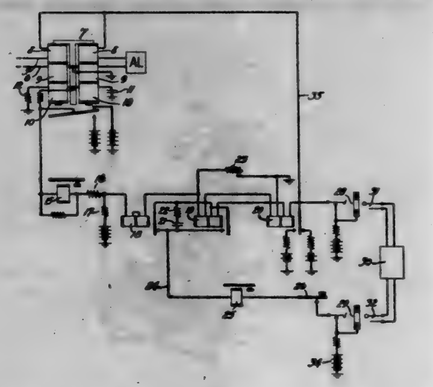
1. A process of treating ores containing silver, manganese and sulfides, comprising treating the ores at a temperature and for such a length of time as will insure roasting of sulfides other than silver sulfide and at the same time prevent a dead roast so as to insure retention of silver sulfide, advancing the minerals and liberated gases together in the same direction, and lowering the temperature below the decomposition temperature of manganese sulfate for the action of sulfur gases on the manganese mineral to form manganese sulfate.

---

1,562,943. TELEGRAPH SYSTEM. GEORGE C. CUMMINGS, Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1924. Serial No. 723,148. 7 Claims. (Cl. 178—58.)

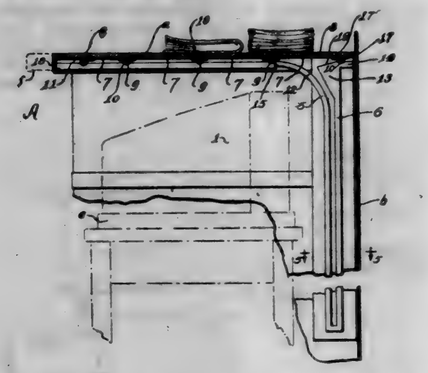
1. In a telegraph system, a metallic circuit, a local circuit, signal responsive means connected in said metallic circuit for impressing on said local circuit positive

and negative impulses, a loop circuit, means included in said local circuit for repeating to the loop circuit open and closed circuit conditions in accordance with



the positive and negative current impulses impressed on said local circuit by said signal responsive means, and a sending relay in said local circuit.

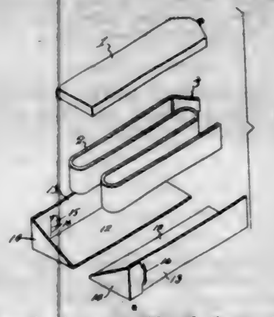
1,562,944. COUNTER. JAMES L. DAVIDSON, Los Angeles, Calif. Filed Dec. 21, 1921. Serial No. 523,995. 5 Claims. (Cl. 45—92.)



5. A store counter comprising relatively fixed top portions and an intermediate disappearing top portion, said disappearing top portion comprising a plurality of hingedly connected slab members, means in the plane of the fixed top sections forming a guideway coextensive with the width thereof, guide forming means disposed at an angle to said horizontal guideway and communicating therewith between the ends thereof, and a deflector located at the junction of said guideways and adapted to direct one edge portion of said disappearing top into the adjacent end of the horizontal guideway, whereby said sections may be moved from the upright guideway into the horizontal guideway and then be shifted rearwardly across the upright guideway to provide a full width top portion.

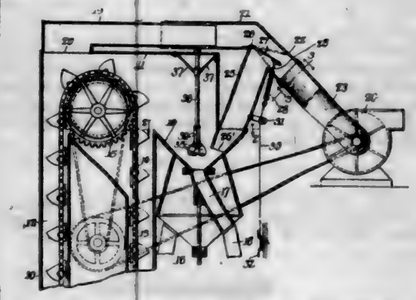
1,562,945. METHOD OF MAKING DRY BATTERIES. CYRIL P. DEIBEL, Youngstown, Ohio, assignor to The Twin Dry Cell Battery Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 12, 1923. Serial No. 612,232. 8 Claims. (Cl. 136—175.)

1. The method of forming a battery cell which consists in the steps of first compressing a quantity of battery mix with an anode in an open sided container, second placing a cathode in contact with the compressed mix



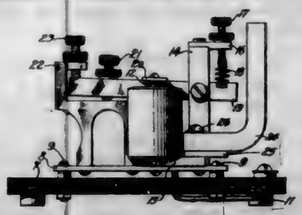
exposed through the open side of the container, and third compressing the cell thus formed and by the same operation inserting said cell into a permanent carton.

1,562,946. DEVICE FOR REMOVING DUST FROM GRAIN ELEVATORS. ROY L. DOWDALL, Oberlin, Kans., assignor, by mesne assignments, of one-half to J. F. Martin, Oberlin, Kans. Filed Aug. 7, 1924. Serial No. 730,573. 11 Claims. (Cl. 130—17.)



1. In an apparatus of the character described, the combination with the head and leg of a grain elevator, a bucket conveyor therein, and a hopper into which the grain is discharged from the conveyor buckets, of a suction fan, a pipe communicating at one end directly with the top wall of the elevator head and at its other end with the suction side of said fan, and another pipe communicating at one end directly with said hopper and at its other end with the suction side of said fan.

1,562,947. ELECTROMAGNETIC DEVICE. AUGUSTUS J. EAVES, Ossining, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1923. Serial No. 633,629. 3 Claims. (Cl. 178—98.)



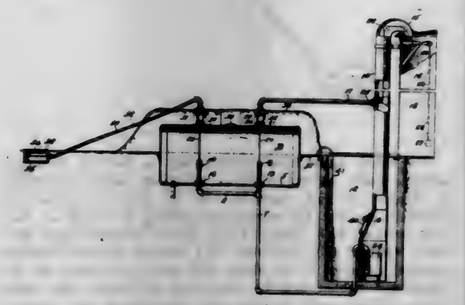
1. In a polarized sounder, a base, an electro-magnet carried by said base having cores with pole-pieces secured thereto, a permanent magnet secured to the pole-

pieces, and a non-magnetic spacer interposed between said permanent magnet and pole-pieces for maintaining a uniform high reluctance path between it and the pole-pieces of the electromagnet.

1,562,948. PAINT SHIELD. ROBERT ELLIOTT, New Haven, Conn., assignor of one-half to Thomas M. Binks, New Haven, Conn. Filed June 9, 1925. Serial No. 35,877. 1 Claim. (Cl. 91—65.)

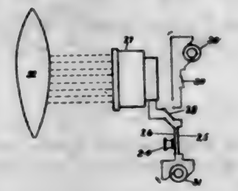
A paint shield, comprising a pair of inner plates, each provided with a spring-finger, a pair of outer plates, each formed with teeth in line with said springs and adapted, when the said plates overlap, to be held in position by the engagement of the springs with said teeth.

1,562,949. FIRE-EXTINGUISHING APPARATUS. ORLANDO R. ERWIN, Forest Hills, N. Y., assignor to Foamite-Childs Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 20, 1920, Serial No. 431,923. Renewed Nov. 23, 1923. 10 Claims. (Cl. 169—4.)



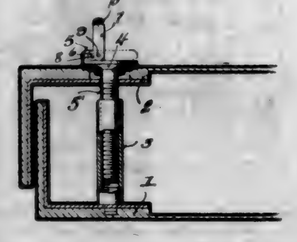
1. A fire extinguishing apparatus in which component solutions are adapted to be separately stored and to be commixed in the event of fire to produce a fire extinguishing foam, a mixing chamber, a tank holding an acid solution located in said mixing chamber, a tank holding a basic solution located above said acid solution tank, a duct connecting the said tanks openable in time of fire to permit the basic solution to feed into the acid tank to commix with the acid therein to produce the fire extinguishing foam in said mixing chamber, and equalizing means connecting the mixing chamber and the second mentioned tank.

1,562,950. SIGNALING BY ULTRA-AUDIBLE SOUND WAVES. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Dec. 14, 1918. Serial No. 266,711. 12 Claims. (Cl. 177—386.)



1. In a system of signaling by high frequency sound vibrations the method of producing a beam of sound by generating ultra-audible sound vibrations by the motion of a surface having a large ratio of the diameter of the surface to the wave length of said sound vibrations at an ultra-audible frequency and having all of said surface vibrating in substantially the same phase.

1,562,951. SCREW FOR LOOSE-LEAF BINDERS. CHARLES FRANZ, Jr., Milwaukee, Wis., assignor to The Heinn Company, Milwaukee, Wis. Filed Sept. 17, 1923. Serial No. 663,179. 3 Claims. (Cl. 129—13.)

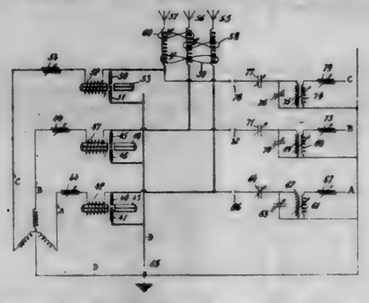


1. A screw provided with a threaded shank and having a two part head, one of the parts of said head consisting of a disk integral with said screw and having a flat face, the other part of said head consisting of a movable disk having a flat face normally contacting with the first mentioned flat face, said disks being pivoted together and the said flat faces extending to the periphery of said head.

1,562,952. ARC CONVERTER. LEONARD F. FULLER, Palo Alto, Calif., and GEORGE C. SWEET, Waterloo, N. Y., assignors, by mesne assignments, to Wireless Improvement Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 16, 1921. Serial No. 452,789. 2 Claims. (Cl. 250—17.)

1. An arc signaling system comprising a source of polyphase alternating current, a plurality of arcs each operable on one phase of said source individually, means for producing a plurality of magnetic fields each of said fields being associated with one of said arcs and adapted to be energized by the current feeding its associated arcs, each of said arcs being subjected to the action of

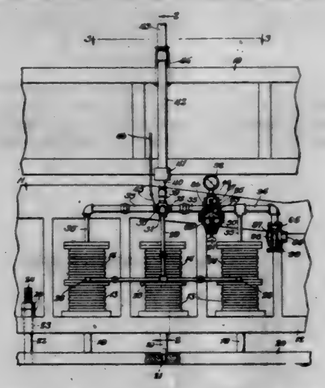
its associated magnetic field, a plurality of antennæ each individually and operatively associated with one of said arcs, said antennæ being adapted to cooperate in the



transmission of high frequency signals, and means for producing spark discharges across the arc-gaps for igniting said arcs.

---

1,562,953. BLANK HOLDER. RUDOLPH W. GLASNER and OLOF G. NILSON, Chicago, Ill., assignors to Marquette Tool & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1922. Serial No. 537,392. 7 Claims. (Cl. 113—46.)



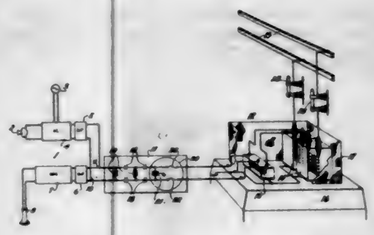
1. A mechanically operated sheet metal drawing press embodying a reciprocating member, and means whereby the member will operate to draw a shell of a depth substantially equal to the full operation stroke of the press, the said means embodying a fluid pressure blank holding means joined with the reciprocating member for unitary reciprocation and operable upon the top side of the work, and means for controlling the fluid pressure upon the blank holding means.

---

1,562,954. FLEXIBLE HOSE. HOWARD W. GOODALL, Aldan, Pa. Filed May 4, 1923. Serial No. 636,527. 6 Claims. (Cl. 137—30.)

1. Flexible hose having a duck and rubber wall and internally provided throughout its length with spaced immovable coupling elements available for repair use by cutting off ruptured portions of the wall of the hose, substantially as described,

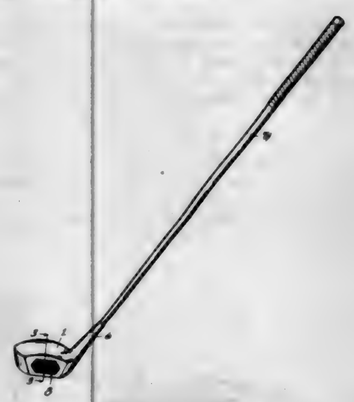
1,562,955. POWER LINE SIGNALING. ALFRED M. GRANICH, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 7, 1924. Serial No. 704,586. 4 Claims. (Cl. 179—2.)



1. In combination, a power transmission line, a signal translating system, and a broad band wave filter connected between said translating system and said power line, said filter comprising two groups of elements, said groups being physically separated, one of said groups comprising elements adapted to low voltages of signal communication and the other of said groups including terminal elements adapted to the voltages of said power line, and said other group being enclosed within a protective compartment.

---

1,562,956. GOLF-CLUB HEAD. ALFRED A. GUERNE, Kalamazoo, Mich. Filed Mar. 23, 1925. Serial No. 17,589. 10 Claims. (Cl. 273—77.)



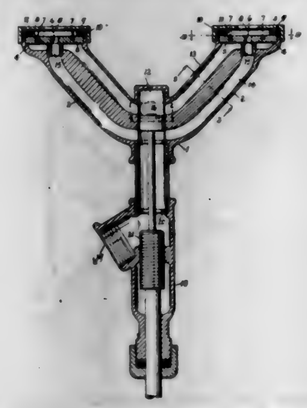
1. A golf club head comprising a hollow integral metallic body having integral partition walls providing an impact member chamber, and an impact member of porcelain having rearwardly projecting portions at the ends thereof with curved faces seated directly upon the inner wall of said chamber, said impact member having external grooves in its sides and ends and being set in vulcanized rubber which surrounds the sides and ends thereof filling said grooves and supporting the impact member with its sides and ends out of contact with the walls of the chamber.

---

1,562,957. SPRAY NOZZLE. WILLIAM L. HAMILTON, Bangor, Mich. Filed June 15, 1925. Serial No. 37,201. 4 Claims. (Cl. 299—144.)

4. A sprayer comprising a body member provided with a variable spray nozzle head and having a piston valve

chamber therein and a plurality of nozzle passages opening thereto in spaced relation, and a piston valve



adjustable in said valve chamber to close either of said passages or to simultaneously open both of the passages, said valve having a longitudinal passage therein.

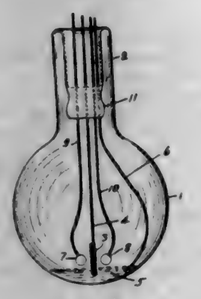
---

1,562,958. ALLOY. CHARLES E. HANSEN, Providence, R. I. Filed Apr. 6, 1922. Serial No. 550,197. 4 Claims. (Cl. 75—1.)

1. A metal alloy containing more than fifty per cent gold, nickel and iron each in substantial amounts, and manganese or magnesium in an amount substantially less than the iron and nickel but sufficient to increase the tensile strength and workability of the substance.

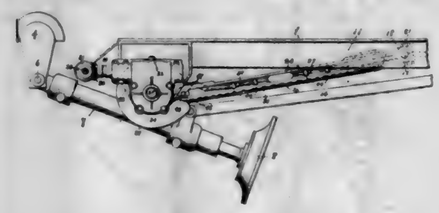
---

1,562,959. ELECTRIC-ARC DEVICE. ERTLE LESLIE HARRINGTON, Saskatoon, Saskatchewan, Canada, assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 22, 1921. Serial No. 454,387. 15 Claims. (Cl. 176—45.)



1. An electric arc device comprising a sealed envelope containing a gas inert with respect to the operating elements of the device and of such pressure as to stabilize the arc, an anode, an incandescible starting cathode, a vaporizable operating cathode, a stem for said device and an independent electrical connection for each of said electrodes sealed through said stem in a single press, the circuit to said incandescible cathode being completed through and dependent upon the vaporizable cathode.

1,562,960. TRAILER SUPPORT. ERNEST F. HARTWICK, Detroit, Mich., assignor to Detroit Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 10, 1923. Serial No. 661,749. 6 Claims. (Cl. 280—33.1.)



1. In a trailer support, the combination of a pair of legs pivoted at their upper ends so as to be adapted to swing up towards the frame of the trailer, a carriage slidable longitudinally of the trailer and guides therefor, means connecting the legs to the carriage, a shaft extending transversely of the trailer and means to rotate the shaft in either direction, a pulley on the shaft, a link connecting to the carriage and resting on the pulley, and a flexible connection between the pulley and link.

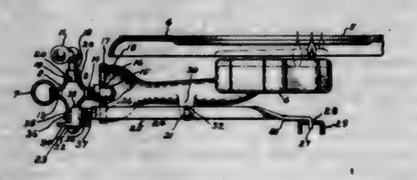
---

1,562,961. DIRECTIVE RADIO TRANSMISSION SYSTEM. RAYMOND A. HEISING, Milburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 16, 1921. Serial No. 470,042. 22 Claims. (Cl. 250—11.)

1. A method for directive radio transmission, utilizing a source of carrier waves and a linear radiating conductor connected therewith, which comprises the steps of radiating a portion of the waves from said source into space, transmitting another portion of said waves along the conductor, absorbing a portion of the energy thus transmitted at points in the conductor, radiating the absorbed energy from said points and preventing reflection of the unabsorbed transmitted waves at the remote terminal.

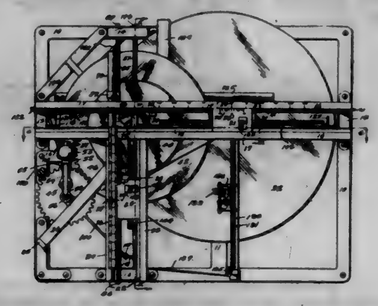
---

1,562,962. GAS BURNER. CHARLES L. HEISLER, Schenectady, N. Y. Filed June 23, 1924. Serial No. 721,619. 12 Claims. (Cl. 126—39.)



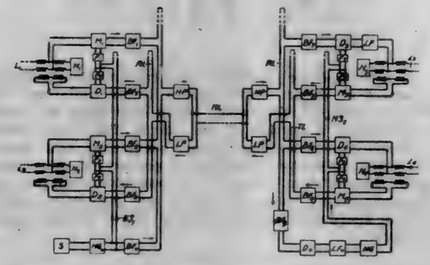
1. The combination with a gas stove having a burner and a valve for controlling the supply of gas to the burner, of a movable support upon which the burner is mounted, a cam which moves with the valve, and means carried by the support and engaging the cam whereby as the valve is turned the support will be moved to adjust the position of the burner.

1,562,963. AUTOMATIC PLANIMETER. OLD G. HERM, Marshalltown, Iowa. Filed May 9, 1924. Serial No. 712,107. 10 Claims. (Cl. 235—61.)



1. A planimeter comprising a frame, a scale for registering vertical measurements, a movable bridge for said scale, a scale for registering horizontal measurements, a movable bridge for the last said scale, a planimeter disk, a planimeter wheel designed to frictionally engage one surface of said planimeter disk and having its axis mounted in a plane parallel to said disk and radially with the axis thereof, means operated from the movable bridge of said vertical scale for moving said planimeter wheel axially, and means operated from the bridge of said horizontal scale for rotating said planimeter disk.

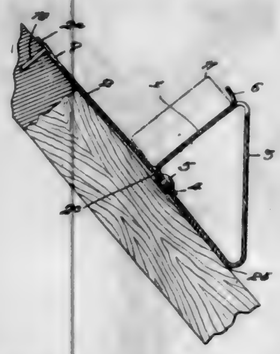
1,562,964. MULTIPLEX CARRIER-WAVE TRANSMISSION. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 28, 1923. Serial No. 621,736. 6 Claims. (Cl. 179—15.)



1. In a carrier wave transmission system, a sending station and a receiving station, a source of base frequency waves at the sending station, a harmonic generator associated with said source to produce a plurality of harmonic frequency waves, circuits for selecting and controlling certain of said harmonic frequency waves in accordance with signals to be transmitted; a circuit associated with said harmonic generator for transmitting a plurality of other harmonic frequency waves, circuits at the receiving station to receive the signal controlled waves, a circuit to receive the other harmonic frequency waves, means to derive from the last mentioned waves a wave of the base frequency, and means for utilizing the wave so derived in reproducing the transmitted signals.

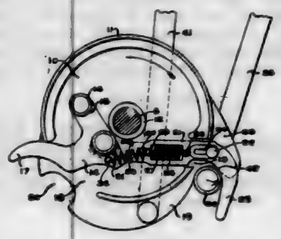
1,562,965. ROOF BRACKET. HENRY A. HUBSCHMITT, Jr., Montclair, N. J. Filed May 31, 1924. Serial No. 716,853. 3 Claims. (Cl. 304—20.)

1. In a roof bracket of the type described, a shank portion, means projecting therefrom for supporting a scaffold timber, said shank being provided with a key hole slot, a beveled portion in the lower plane of said shank leading into the key hole, the upper portion of said



key hole slot being beveled in planes converging from the upper to the lower plane of the shank and adapted to fit under the head of a nail or other securing means.

1,562,966. POWER LIFT FOR PLOWS. EDWARD ARTHUR HUTCHINSON, Brantford, Ontario, Canada, assignor to Cockshutt Plow Company, Limited, Brantford, Ontario, Canada, a Corporation of Canada. Filed Apr. 27, 1923. Serial No. 635,098. 9 Claims. (Cl. 192—62.)

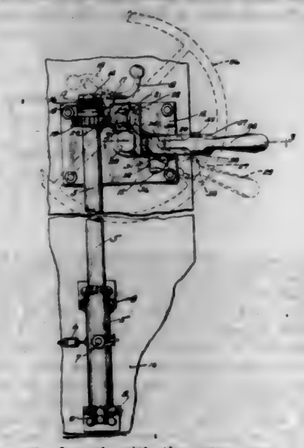


1. In a power lift for plows, the combination with the plow frame, land wheel axle, and land wheel thereon, of an annular pawl supporting member, an inwardly extending annular casing secured to the hub of the land wheel and provided with transverse indentures, a pawl pivoted on the pawl spporting member and provided with a roller at one end designed to engage with the indentures, a slide supported in suitable guides on the pawl supporting member and spring-held so as to engage with the pawl, means for withdrawing the end of the slide from engagement with the pawl and yet moving the pawl so that the roller on the end thereof engages with the transverse indentures and causes the supporting member to swing, means for retaining the pawl supporting member in position at the end of its swing and means for releasing the pawl supporting member when desired.

1,562,967. HAND BRAKE. SIGURD WILHELM JOHNSON, Minneapolis, and ANDREW ROSS, St. Paul, Minn. Filed June 11, 1925. Serial No. 36,381. 5 Claims. (Cl. 74—119.)

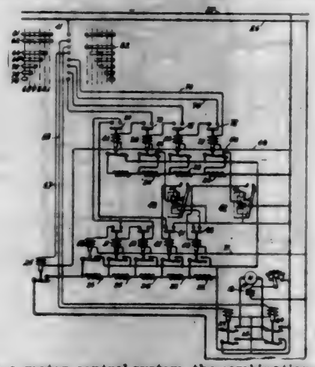
1. In a hand brake, a brake staff equipped with a worm gear, a crank mounted for free swinging movement in a vertical plane, a worm journaled on the crank and adapted to mesh with the worm gear, a hand lever directly

attached to the crank, arranged to drop under the action of gravity and swing the crank into a position to carry



the worm out of mesh with the worm gear, a latch for holding the hand lever with the worm in mesh with the worm gear, and means for operating the worm.

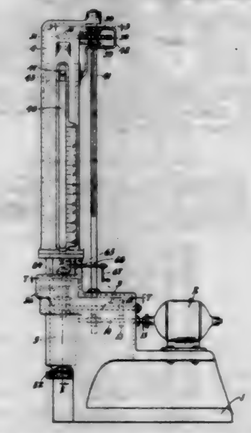
1,562,968. MOTOR-CONTROL SYSTEM. BENJAMIN W. JONES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 6, 1924. Serial No. 711,494. 7 Claims. (Cl. 172—179.)



1. In a motor control system, the combination of an electric motor, a resistance arranged to be connected in shunt to the motor armature, a resistance in series with the motor armature, a plurality of electroresponsive switches normally operable in a predetermined sequence for varying the said resistances to change the motor speed, and means operated responsively to the rate of change of the motor speed for preventing the operation of a portion of the said switches to vary one of said resistances when the change in the motor speed exceeds a predetermined value upon the operation of another portion of said switches to vary the other of said resistances.

1,562,969. REBORING AND GRINDING MACHINE FOR ENGINE CYLINDERS. LEBERT E. JORDAN and CHARLES H. BURROWS, Minneapolis, Minn., assignors, by mesne assignments, to Jordan Machine Tool Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 1, 1922. Serial No. 604,397. 15 Claims. (Cl. 29—26.)

1. A portable machine for grinding and boring the cylinders of internal combustion engines having in combination, a frame constructed and arranged to rest on the engine casing, and comprising bearings, a boring bar revoluble in said bearings and longitudinally movable relative thereto, a member surrounding and splined to said boring bar for turning the same, a grinding member eccentrically disposed in said boring bar, means for turning said grinding member, a screw journaled in said



frame parallel to said boring bar adapted to move said boring bar and grinding mmeber longitudinally, means driven by said member surrounding the boring bar for turning said screw in one direction, and another member driven by said means surrounding the boring bar adapted to be shifted into position to drive said screw in the opposite direction.

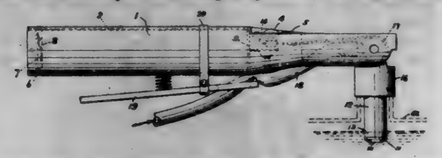
1,562,970. TURBINE BLADING. ALEXANDER T. KASLEY, Moore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 28, 1924. Serial No. 702,489. 14 Claims. (Cl. 253—77.)

1. In an elastic fluid turbine, the combination with a blade-carrying disc, of blades carried thereby and mounted by holding means extending transversely of said disc, and holding rings to prevent movement of said holding means transversely of said disc, said holding rings being shrunk in place.

1,562,971. BATTERY-CELL FILLER. WILLIAM ERNEST KERSHAW, Philadelphia, and CARROLL HODGE, Radnor, Pa. Filed July 8, 1922. Serial No. 573,748. 7 Claims. (Cl. 226—39.)

1. A portable cell filler comprising in combination a handle or stock internally chambered and bifurcated, a fluid supply tube arranged outside of said chambered portion of the stock, a signal lamp arranged through the wall of the stock and visible from the outside thereof, a battery arranged in the chamber, a nozzle movably mounted in the bifurcation and provided with contacts adapted for liquid bridging, a controlling valve for the nozzle, and circuit connections for the battery, signal and contacts.

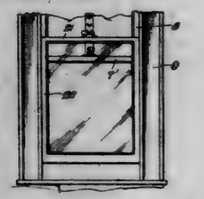
5. In a portable cell filler the combination of a battery and contacts connected therewith and adapted for insertion in electrolyte and being respectively of copper and



leaden materials which do not develop counter electromotive force under electrolytic action whereby the battery can be small and portable.

---

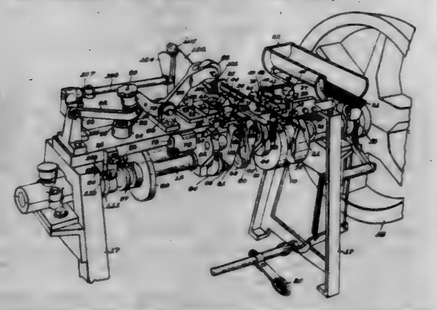
1,562,972. WINDOW FASTENER. OTTO L. KOHNERT, Chicago, Ill. Filed Dec. 13, 1923. Serial No. 680,389. 5 Claims. (Cl. 292—273.)



1. A window fastener comprising a hook member provided with a loop portion adapted to receive and engage a fixed securing hook member attached to the inner side of a window sash, a fastener member movably mounted on an adjacent inner sash and adapted to detachably engage said first-mentioned hook member, for fastening the sashes in a desired predetermined position with respect to each other, and a guard on said first mentioned hook member and adapted to hold the loop portion of the said hook member in engagement with the fixed securing hook member, all of said parts being located on the inside of the outer window sash and inaccessible from the outside of the window.

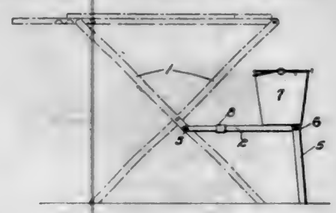
---

1,562,973. WIREWORKING MACHINE. HERMAN KUESTER, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Mar. 6, 1924. Serial No. 697,263. 30 Claims. (Cl. 140—82.)



8. A wire working machine comprising a bed plate, a forming pin, a pair of forming jaws pivotally mounted on said bed plate and adapted when actuated to fold the work around said forming pin, an actuating slide, tappets mounted on said slide to engage said jaws, a form block with which the stock is brought into co-operative relation by forming around said forming pin, and a die member acting on the work while the work is clamped upon said pin.

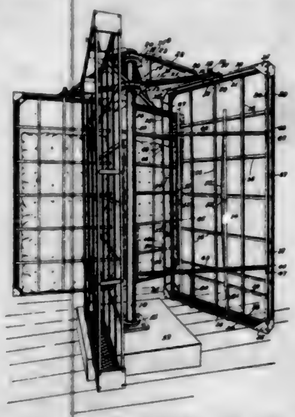
1,562,974. FOLDING STAND FOR PASTE BUCKETS. WILLIAM LAFFOLD, St. Louis, Mo. Filed Dec. 20, 1923. Serial No. 681,706. 1 Claim. (Cl. 304—1.)



A paper-hanger's paste-bucket stand, comprising a pair of horizontal supporting-bars, the inner ends of which are adapted to be pivotally connected to corresponding trestle legs; and a cross-bar and a pair of supporting-legs formed integral from a single piece of strap-iron, and adapted to be pivotally connected to the outer free ends of said supporting-bars; the free ends of said supporting-legs resting upon the floor when the said stand is in an unfolded position; and said cross-bar contacting with the upper edges of said horizontal support-bars to limit the outward movement of said supporting-legs.

---

1,562,975. MATTRESS-AIRING DEVICE. ARTHUR G. LEAKE, Bridgeport, Conn. Filed Oct. 27, 1922. Serial No. 597,431. 2 Claims. (Cl. 211—20.)



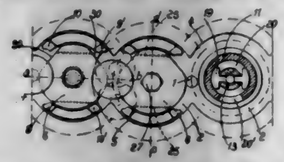
1. In an airing device for mattresses and the like, a vertical support, a rotatable mattress supporting frame thereon, and a vertical mattress container rotatably suspended from said frame, said mattress container consisting of a rectangular grid-form adapted to surround the edges of a mattress and a grid-form rear side and a hinged grid-form front side adapted to support a mattress uprightly in said container, whereby a mattress can be easily placed into and removed from said container to be wholly exposed to air and sun, and can serve as a member in the nature of a sail adapted to cause the container to revolve on its own pivot and about said support by the action of breezes upon the mattress.

---

1,562,976. BRAIDING MACHINE. LOUIS JOSEPH GUSTAVE LEPLAIVE and JEAN JACQUES KNECHT, St.-Etienne, France. Filed Apr. 11, 1924. Serial No. 705,960½. 7 Claims. (Cl. 96—12.)

1. A lace making machine including in combination, upper and lower annular plates the upper of which is provided with a circular raceway, a circular series of

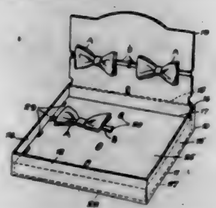
discs arranged in the raceway so as to divide the raceway into two oppositely extending and intersecting waving slots, bobbins mounted to slide in said slots, vertically movable and rotatable drivers arranged between the plates, vertical claws formed on the drivers and operating in the slots for coacting with the bobbins,



cooperative engaging means between the drivers and discs, means mounted beneath the drivers and engageable therewith for effecting rotation thereof, and means for moving the drivers into engagement with the discs when it is desired to stop the movement of the bobbins, substantially as and for the purposes set forth.

---

1,562,977. DISPLAY BOX. DAVID LEVIGTON, New York, N. Y. Filed May 15, 1925. Serial No. 30,500. 3 Claims. (Cl. 206—44.)



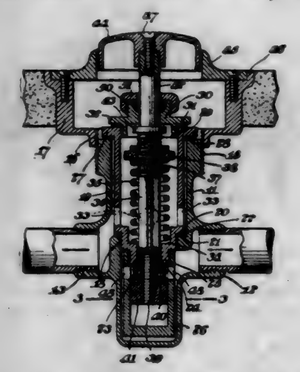
1. The combination with an approximately rectangular box body having an open top, of a substantially rectangular removable board in flat spaced position in the body above its bottom, and a separate display card upstanding between the one end of the board and the adjacent end wall of the body, and the display card having spaced wing sections folded under the board.

---

1,562,978. WATCH ALARM. WILLIAM MILLER, New York, N. Y. Filed Oct. 4, 1924. Serial No. 741,556. 8 Claims. (Cl. 58—16.)

1. An inaudible alarm including a flattened cylindrical watch casing having a perforated recess in the back thereof, a stem projecting from one edge of said watch casing, for winding and setting the time mechanism thereof, an alarm mechanism within said watch, a second stem projecting from said casing and adjacent to said first mentioned stem for winding and setting said alarm and a hammer operated by said alarm mechanism and through said back and normally within the said recess when at rest, said hammer being adapted to be projected beyond the walls of said recess to contact with a body upon which said watch is placed, only when said alarm mechanism is operated.

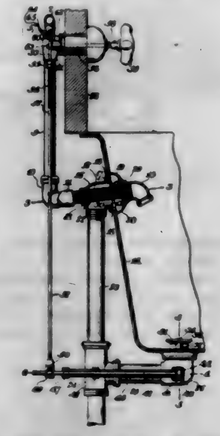
1,562,979. VALVE. CHARLES J. MUENDT, Philadelphia, Pa., assignor to Haines, Jones & Cadbury Incorporated, a Corporation of Pennsylvania. Filed Dec. 28, 1921. Serial No. 525,341. 6 Claims. (Cl. 251—138.)



4. In a valve mechanism for liquid supply, the combination of a chambered body having a closed cylindrical lower end and horizontal inlet and discharge nozzles positioned above said cylindrical end, a self-containing valve structure comprising a tubular formation adapted to be removably secured by threaded engagement within said chambered body, providing a valve seat between the two nozzles and a dash pot recess below the valve seat, a valve, a piston in fixed relation with the valve and operating in the dash pot and an actuating spring therefor, all housed in said tubular formation, and threaded means for maintaining the spring in operative position within the tubular formation and under required tension adjustment.

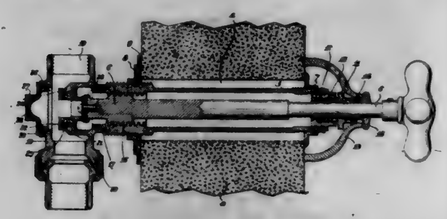
---

1,562,980. WASTE MECHANISM AND CONTROL. CHARLES J. MUENDT, Philadelphia, Pa., assignor to Haines, Jones & Cadbury, Incorporated, a Corporation of Pennsylvania. Filed July 16, 1923. Serial No. 651,707. 12 Claims. (Cl. 4—195.)



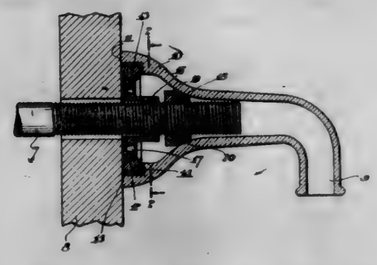
1. In combination with a bath tub, having a waste outlet, a valve for controlling said outlet, a horizontal waste pipe connected with the outlet, a valve actuating arm, a rock-shaft for actuating said arm, extending outside of and parallel with the horizontal waste pipe, and means for arbitrarily operating said shaft.

1,562,981. VALVE STRUCTURE. CHARLES J. MUENDH. Philadelphia, Pa., assignor to Haines, Jones & Cadbury Incorporated, a Corporation of Pennsylvania. Filed Aug. 6, 1924. Serial No. 730,365. 3 Claims. (Cl. 251—49.)



3. In combination with a recessed wall a valve structure comprising a tube extending through the recess of the wall, threaded exteriorly at each end and also interiorly at one end, and provided with an interiorly threaded portion between its two ends, cooperating flanged nuts for engaging the wall adjacent the recess and clamping the tube to the wall, a valve spindle extending through the tube having a valve element at one end and an operating handle at the other end, and a threaded portion cooperating with the interiorly threaded portion of the tube, means forming a guide and packing for the spindle at one end of the tube, a chambered body secured to the other end of the tube, having inlet and outlet ports and an apertured partition between said ports, a removable valve seat member threaded into said apertured partition, said chambered body also provided with an opening and a removable closure therefor in alinement with the valve seat member, as and for the purpose specified.

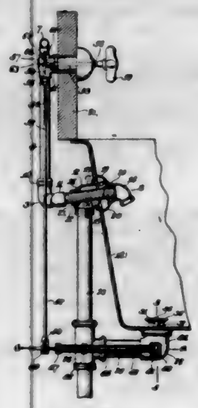
1,562,982. NOZZLE CONNECTION. CHARLES J. MUENDH, Philadelphia, Pa., assignor to Haines, Jones & Cadbury Incorporated, a Corporation of Pennsylvania. Filed Apr. 22, 1925. Serial No. 24,959. 7 Claims. (Cl. 285—30.)



1. The combination of a supply pipe, a nozzle member, a threaded element secured to the nozzle member, a cooperating threaded element surrounding the supply pipe, and means for securing said cooperating threaded element in required initial position of rotative adjustment with respect to the first mentioned threaded element.

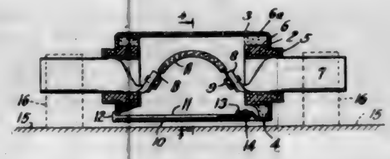
1,562,983. COMBINATION SUPPLY AND WASTE. CHARLES J. MUENDH, Philadelphia, Pa., assignor to Haines, Jones & Cadbury Company, a Corporation of Pennsylvania. Original application filed July 16, 1923, Serial No. 651,707. Divided and this application filed June 16, 1925. Serial No. 37,414. 5 Claims. (Cl. 4—194.)

1. In combination with a tub or basin, a supply pipe, a discharge nozzle member, a waste overflow elbow, and a threaded connecting pipe extending entirely through the elbow having one end threaded into the



nozzle member, the other end in threaded connection with the supply pipe and an intermediate portion in threaded engagement with the elbow.

1,562,984. INCASED FUSE. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Apr. 4, 1921. Serial No. 458,353. 2 Claims. (Cl. 200—131.)

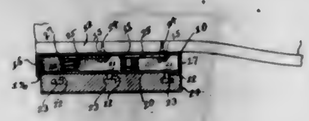


1. A fuse casing carrying terminals passing through the opposite ends thereof in combination with an arched fuse strip within the casing, said casing having an opening on the concave side of the strip through which the latter may be removed or inserted.

1,562,985. FUSE. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Apr. 11, 1921. Serial No. 460,219. 4 Claims. (Cl. 200—131.)

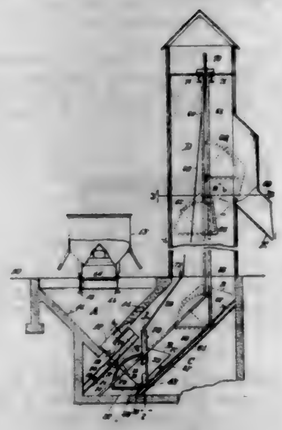
1. A fuse case with an opening through one of its ends and with inwardly projecting tongues on opposite sides of said opening adapted to embrace the fuse strip, said tongues having a passageway between them which is open at the outer end so that a fuse strip can be inserted from the outside, in combination with a wedge for fastening the end of the strip between said tongues with a good frictional engagement.

1,562,986. SPRING HEEL. JOHN MUSTO, Waterbury, Conn. Filed Aug. 4, 1924. Serial No. 729,968. 3 Claims. (Cl. 36—38.)



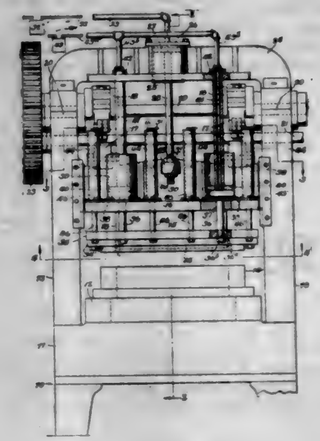
1. In a spring heel, a hollow shell adapted to be attached to the rear of the sole of a shoe, a plate releasably closing said shell, said plate having a heel tread secured thereto, a spring located in said shell and engaging said plate, and adjustable means for holding said spring in various positions within said shell.

1,562,987. CONVEYING SYSTEM. HENRY W. NAGEL, Chicago, Ill., assignor to Thomas H. Ferguson, Oak Park, Ill. Filed July 8, 1921. Serial No. 483,201. 7 Claims. (Cl. 214—125.)



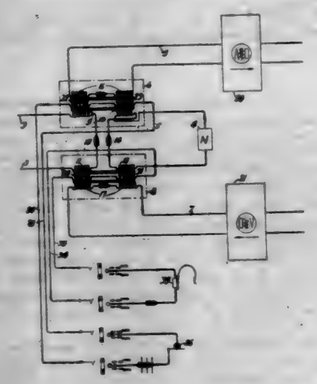
1. A conveying system including a pocket having a discharge opening at a low point through which material may pass from the pocket by gravity, a flat reciprocating door movable in its own plane in a direction inclined to the vertical, guides extending from a receiving position below said opening in a like inclined direction beyond the limits of said pocket and then vertically to a dumping position, a bucket container, a bucket bail connected to said container below and to one side of the center of gravity of said container so as to give it a tendency to overturn toward said pocket, stop means for limiting the movement of the container relative to the bail in that direction, means cooperating with said guides to maintain said bail upright in its travels with the bucket container to and fro between said receiving and dumping positions, the paths of travel of said door and container being slightly convergent downward at said receiving position, means dependent upon said convergence acting between said door and a near portion of said container to open said door as said container moves downward and to close said door as said container moves upward, and means for preventing said container from being moved about its connection to said bail in a direction away from said pocket as a result of the engagement of said door with said container during the latter's downward movement.

1,562,988. POWER PRESS. JOHN NELSON, Chicago, Ill., assignor to Marquette Tool & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1922. Serial No. 598,698. 11 Claims. (Cl. 113—46.)



1. In a power press, in combination with its ram, of a draw-ring, movable with said ram into engagement with the work, a plurality of hydraulic pressure devices connected to said draw-ring and means for regulating the pressure in each pressure device.

1,562,989. SIGNALING CIRCUITS. DONALD A. QUARLES, Englewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1922. Serial No. 606,057. 7 Claims. (Cl. 179—170.)



1. In a signaling system, a two-way transmission line, a one-way transmission line, a second one-way transmission line, an artificial network for balancing said two-way line, transformer means for coupling said lines and said network to render said two way line, said first one way line, said second one way line and said

network conjugate, an auxiliary winding on said transformer means coupled to other windings of said means to receive currents from both said two-way line and only the first of said one-way lines, a second auxiliary winding coupled with other windings of said means such that alternating current potentials present in said second auxiliary winding impress currents on said two-way line and only on the second of said one-way lines, local means for indicating signaling currents received by said first auxiliary winding, and local means for impressing signaling currents upon said second auxiliary winding.

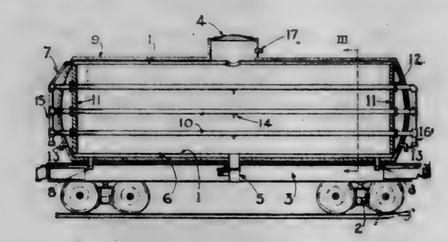
1,562,990. SWEATBAND. MAX RAPPAPORT, New York, N. Y. Filed Dec. 19, 1922. Serial No. 607,788. 1 Claim. (Cl. 2—181.)

A sweat band or the like, having the material thereof depressed at regular spaced intervals longitudinally of the band with the depressions of uniform width, the bottoms of the depressions being colored to thereby simulate a colored strip loosely woven through the band.

---

1,562,991. TRANSPORTABLE TANK. EDWARD A. RUDIGIER, Baltimore, Md., assignor to Standard Development Company, a Corporation of Delaware. Filed Nov. 16, 1923. Serial No. 675,077. 5 Claims. (Cl. 221—67.)



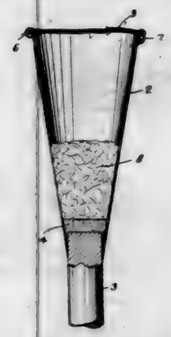
1. A car-tank having a central top manhole inlet and a central bottom outlet, a spaced wall around said tank to form a heating jacket, inlet and outlet connections in said jacket for passage of a heating fluid, a covering of heat-insulation surrounding said jacket and tank, a plurality of tubular guides traversing said tank from end to end, inlet and outlet means for the circulation of a heating fluid through said guides, a pair of pistons fitting the interior of the tank mounted to slide on said guides and having stuffing-boxes thereon, a connection at each end of the tank back of each piston for supply of a propelling fluid, and supports for the guides midway of the tank arranged to act also as center stops for the pistons.

5. A transportable tank having guide members traversing said tank, a piston within the tank mounted to slide on said members, and means for actuating said piston.

---

1,562,992. FLOWER HOLDER. MAX SCHLING, New York, N. Y. Filed Apr. 29, 1925. Serial No. 26,609. 1 Claim. (Cl. 47—41.)

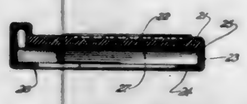
A device for presentation of flowers comprising a tapering cup adapted to receive moss, a handle comprising a stick the upper end of which enters the narrow lower end of the cup, a hardened plastic mass in the



lower end of the cup enclosing the upper end of the stick, and a guard for the top of the cup provided with openings for flower stems.

---

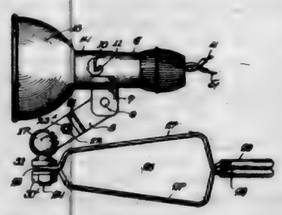
1,562,993. PEDAL COVER. FRANK H. STANWOOD, Wilmette, Ill., assignor to Stanwood Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 20, 1923. Serial No. 675,798. 6 Claims. (Cl. 74—81.)



1. A cover for accelerator pedals, or the like, comprising a molded rubber tread member having a retaining flange, and a layer of non-heat-conducting material on the under side of said tread member.

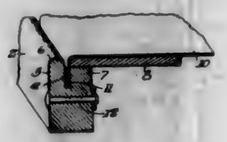
---

1,562,994. ADJUSTABLE CONNECTED ELECTRIC LAMP AND LAMP SUPPORT. ANDREW B. STEWART, Chicago, Ill. Filed Sept. 15, 1921. Serial No. 500,721. 1 Claim. (Cl. 240—53.)



In a support for electric lamps, the combination of a lamp-engaging member, a bracket arm connected with said lamp-engaging member, a socket on said bracket arm, a resilient bracket arm member having a loop portion at one extremity thereof and having resilient arm portions extending from said loop and adapted to be detachably secured to a support, and an intermediate bolt member mounted on and extending through said loop portion of said resilient bracket arm, said bolt having a head extending into and secured in adjustable relation to and clamped between opposed clamping surfaces of said socket on said pivoted bracket arm.

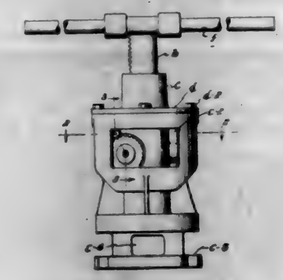
1,562,995. TABLE-COVER FASTENING. CARL M. SWANSON, Streator, Ill., assignor to Metal Stampings Corporation, Streator, Ill., a Corporation of Illinois. Filed Aug. 29, 1921. Serial No. 496,497. 4 Claims. (Cl. 45—31.)



1. In a table top, the combination of a marginal frame comprising strips set up on edge and having integral top portions at the inner and outer sides thereof separated by a deep narrow groove and having the outer portion extending up to a higher elevation than the inner portion, a table top resting on and secured to the top of the inner portion and having the upper surface substantially flush with the upper surface of the outer portion of the marginal frame, and a flexible covering drawn over the table top and having a marginal fold locked in the aforesaid groove by means of a filler interposed between the two portions of the fold.

---

1,562,996. REBORING TOOL. WILLIAM C. VAN DRESSER, Detroit, Mich., assignor to Van Dresser Brothers, a Copartnership composed of said William C. Van Dresser, Wesley B. Van Dresser, and Frank P. Van Dresser, a Copartnership of Michigan. Filed Apr. 29, 1921. Serial No. 465,484. 6 Claims. (Cl. 77—2.)

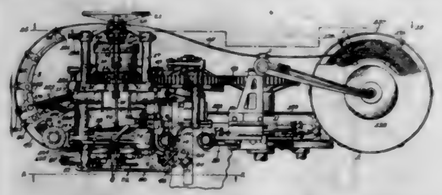


1. In a reboring tool, a rack feed bar journalled for rotation, a stationary threaded member surrounding said bar, feed mechanism coupling the rack teeth of said bar with the thread of said stationary member to advance the bar upon its rotation, and means for maintaining yielding pressure on said feed mechanism tending to hold the same closely in mesh with the rack teeth of the feed bar.

---

1,562,997. WIRE-FEEDING MEANS. BERT L. VAN ORMAN, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Original application filed Feb. 3, 1923, Serial No. 616,652. Divided and this application filed Jan. 2, 1924. Serial No. 683,970. 13 Claims. (Cl. 140—129.)

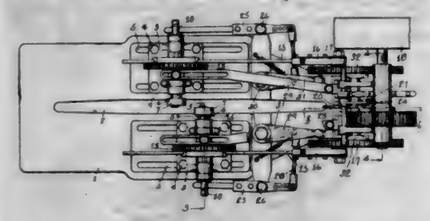
1. The combination of a wire feed means comprising coacting feed rollers, means for applying intermittent feeding pressure to said rollers, means for preventing retracting of the wire when released by the feed rollers operatively associated with said feed control means, a stock reel, a tension arm over which the wire is guided, driving means for said feed rollers including a clutch, a control means for said clutch including said tension arm whereby an excessive stress thereon actuates said



clutch to disconnect said feed roller driving means, a brake for said reel, and operating connections from said tension arm to said brake.

---

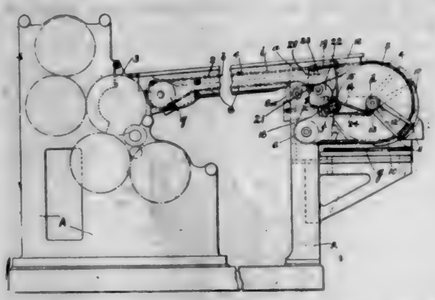
1,562,998. WIRE-FORMING MEANS. BERT L. VAN ORMAN, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Jan. 12, 1924. Serial No. 685,767. 10 Claims. (Cl. 140—82.)



6. In a wire working machine, the combination of a pair of oppositely disposed rotary coiler heads arranged in laterally spaced relation and mounted for axial movement and provided with reciprocating axial core members and winding lugs disposed eccentrically relative to said core members, means for simultaneously rotating and axially moving said coiler heads, and means for retracting said core members for discharging the work.

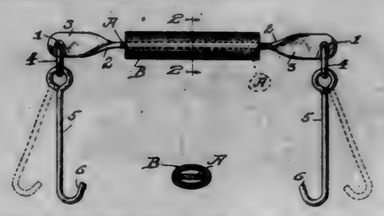
---

1,562,999. DELIVERY MECHANISM FOR PRINTING MACHINES. FRED WAITE, Inglewood, Otley, England. Filed July 20, 1925. Serial No. 44,709. 5 Claims. (Cl 271—76.)



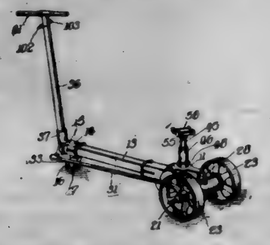
1. In delivery mechanism for printing machines, travelling chains, grippers carried by said chains, sprocket wheels over which said chains are made to take, means for transmitting motion to said sprocket wheels, means extending between and carried by said chains to support the rear portion of the sheets and devices for receiving and depositing the printed sheets as delivered by said chain and released by the grippers thereon.

1,563,000. LIFTING HANDLE. JOHN WAJER and OTTO W. HOPP, Chicago, Ill. Filed Mar. 30, 1925. Serial No. 19,212. 2 Claims. (Cl. 16—114.)



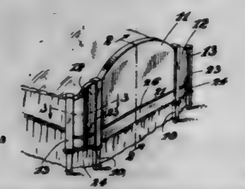
1. The carrying device described comprising a relatively wide and thin, end-apertured bar of metal twisted to form two vertically disposed end portions and a horizontally disposed intermediate member, and means movably secured to the apertured ends for engagement with the article to be carried.

1,563,001. JACK. IRA A. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 5, 1923. Serial No. 622,774. 15 Claims. (Cl. 254—2.)



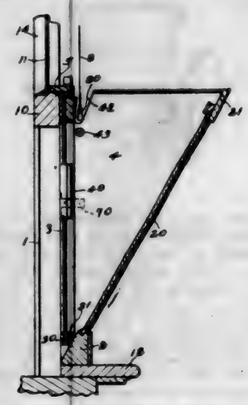
1. In a truck-jack, the combination of a main supporting body, an axle-housing pivoted thereto at its middle, anti-friction bearings in said housing, an axle in said bearings, carrying-wheels on said axle, a jack on said main supporting body, a handle hinged to said main body for vertical rocking movement and constructed to turn on its own axis, operating means for the jack actuated by such rocking movements of the handle, and means connecting the handle to said axle-housing whereby steering of the appliance by swinging the axle-housing on its pivot may be effected by turning said handle on its own axis.

1,563,002. METAL BED. ADOLPH WEISMAN, Brooklyn, N. Y. Filed Aug. 22, 1924. Serial No. 733,520. 8 Claims. (Cl. 5—280.)



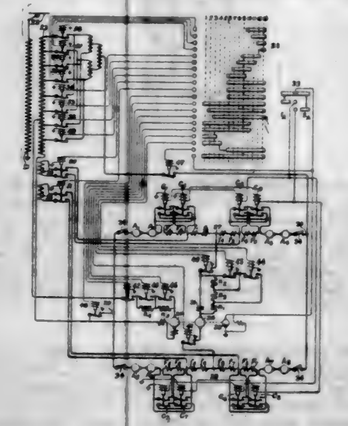
1. An end piece for metal beds including hollow legs, a hollow panel connecting the legs, said panel including a pair of spaced sheets of metal having their upper edges turned over and joined together to provide an uninterrupted surface of the same width as the thickness of the panel, the union of the sheets at the upper edge of the panel being an edge to edge union.

1,563,003. WINDOW VENTILATOR. CHRISTOPHER WILES, Seattle, Wash., assignor of forty-nine per cent to Roy Taylor, Seattle, Wash. Filed May 22, 1924. Serial No. 715,031. 4 Claims. (Cl. 98—31.)



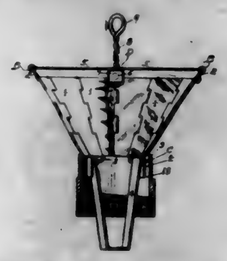
1. A window ventilating device comprising a frame adapted to be secured within a window casing and having an inclined air deflecting inner wall, side walls and a screen forming the vertical outer wall, said side walls having guiding grooves for holding the side edges of the screen and opening freely at their upper ends to permit upward removal of the screen, a bar extending along the top edge of the screen and having interlocking engagement with the frame sides and also having its outermost edge projecting to prevent the window sash being raised above it.

1,563,004. METHOD OF AND MEANS FOR OPERATING ELECTRIC MOTORS. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 12, 1924. Serial No. 719,680. 18 Claims. (Cl. 172—276.)



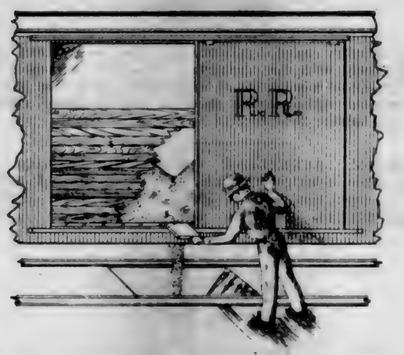
2. The method of operating a series commutator electric motor which consists in initially supplying direct current to said motor for starting the same, thereafter simultaneously applying both direct current and alternating current to said motor during the acceleration of the motor, and then operating said motor by alternating current when it is up to speed.

1,563,005. COLLAPSIBLE FUNNEL. WILLIAM LEROY ALLEE, Topeka, Kans. Filed Mar. 5, 1925. Serial No. 13,354. 3 Claims. (Cl. 226—38.)



1. In a collapsible funnel, a funnel comprising a plurality of converging segments, said segments being hinged together, and adapted to fold in opposite directions alternately, radially disposed rods pivotally connected to the top of the funnel, and the opposite ends to a centrally disposed housing, a member connected to said housing for the downward movement of the inner ends of the said rods by which means the segments of said funnel are collapsed and draw in a close relation, a portable housing and a stirrup, said stirrup converging downward to conform to the collapsed shape of said funnel, a loop on each side of the bottom of said funnel, said loop engaging around sides of said stirrup, functioning as a guiding and retaining means for lower extremity of said funnel concentric to said housing.

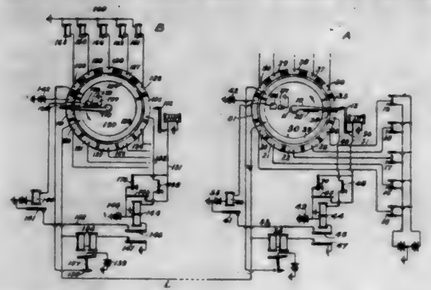
1,563,006. GRAIN-DISPENSING VALVE. FRANCIS E. BEESON, Topeka, Kans. Filed Jan. 27, 1925. Serial No. 5,086. 4 Claims. (Cl. 105—230.)



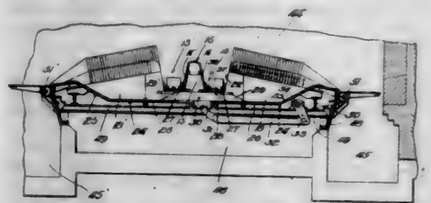
2. In a grain dispensing device, a frame positioned in the floor of a grain container, said frame having perforations in the outer ends thereof, a valve slidably mounted in said frame, reciprocating bolts slidably mounted in the outer end of said valve, a lever actuating said bolts simultaneously for engagement with said perforations, said lever functioning as a handle to withdraw said valve.

1,563,007. SELECTING SYSTEM. JOHN H. BELL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1917. Serial No. 148,113. 20 Claims. (Cl. 178—33.)

7. In a selecting system a sending distributor normally tending to rotate, an electroresponsive device for controlling the rotation of said distributor, a circuit therefor, means for closing said circuit to initiate the operation of said distributor, means controlled by the distributor for stopping the rotation thereof, and means for automatically closing the circuit of the electroresponsive device to again set the distributor in operation.

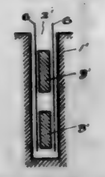


1,563,008. UNDERFEED STOKER. ARTHUR H. BLACKBURN, Worcester, Mass., and SAMUEL A. ARMSTRONG, Detroit, Mich., assignors, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1923. Serial No. 630,990. 5 Claims. (Cl. 110—47.)



1. In an underfeed stoker, the combination of a plurality of longitudinal main retorts forming a central group, spaced apart and having tuyère structures spanning their adjoining margins, and two groups of laterally-extending retorts flanking the extreme ones of said central retorts, each said laterally extending retort communicating with the adjacent one of said central retorts below the level of said tuyère structures to receive from such central retort fuel not yet in state of combustion, said laterally-extending retorts respectively having marginal tuyères, means for feeding fuel longitudinally along said longitudinal main retorts and means, below the level of said tuyères, for feeding fuel not yet in combustion laterally along said laterally extending retorts.

1,563,009. DYNAMO-ELECTRIC MACHINE. OTTO BÖHM, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Nov. 6, 1923. Serial No. 673,178. 4 Claims. (Cl. 171—228.)

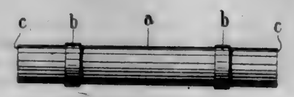


1. In a direct current dynamo-electric machine, an armature provided with slots, a commutated armature winding in said slots, and sheets of non-magnetic, electrical conductive material located in said slots and extending vertically therein, each of said sheets being electrically independent of the other of said sheets.

1,563,010. TANS COMPRISING A REACTION PRODUCT OF SULPHITE CELLULOSE. JOHN BREDIS, Philadelphia, Pa., assignor to Rohm & Haas Company, a Corporation of Delaware. Filed Feb. 23, 1924. Serial No. 694,772. 3 Claims. (Cl. 149—4.)

2. The method of producing a tan which comprises the step of heating together a natural tan and sulphite cellulose in the presence of free alkali until such natural tan and sulphite cellulose enter into chemical combination, and then acidifying the product.

1,563,011. FORM OF END-MEASURING BAR. ARTHUR JOHN CHARLES BROOKES, Bridgnorth, England. Filed July 28, 1924. Serial No. 728,761. 5 Claims. (Cl. 33—168.)

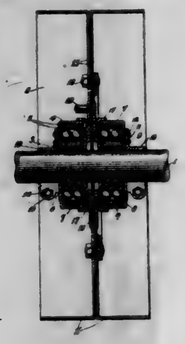


1. An end measuring bar with parallel end faces and nodal bands intermediate of the end faces.

1,563,012. PROCESS OF MAKING MOTOR SPIRITS AND REFINING PETROLEUM PRODUCTS. BENJAMIN T. BROOKS, Bayside, N. Y., assignor, by mesne assignments, to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed May 1, 1918. Serial No. 231,802. 2 Claims. (Cl. 196—40.)

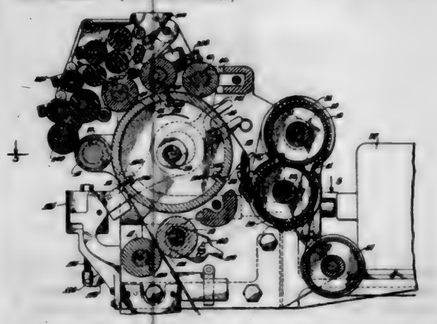
1. The process of making motor spirit which comprises cracking a petroleum product under conditions giving a material rich in olefins, subjecting this material to the action of a sulphuric acid equivalent to strong aqueous $H_2SO_4$ of Baumé gravity materially less than 66°, separating the oil from the substances immiscible therewith, treating the separated oil with an alkali, and distilling off and collecting the oil.

1,563,013. LOOSE PULLEY. HAROLD E. BRUNNER, Larchmont, N. Y. Filed Feb. 27, 1923. Serial No. 621,510. 5 Claims. (Cl. 308—190.)



1. The combination with a pair of anti-friction bearings consisting of inner and outer rings and rolling elements therebetween, housings for the outer rings of such bearings and means for securing each of these to a shaft independently of the other, a pulley having a flange surrounding the anti-friction bearings and a hub connected with such flange upon which hub the inner rings of the bearings are mounted.

1,563,014. TABULATING-CARD PRINTER. FRED M. CARROLL, Endicott, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Apr. 14, 1922. Serial No. 552,654. 16 Claims. (Cl. 101—224.)

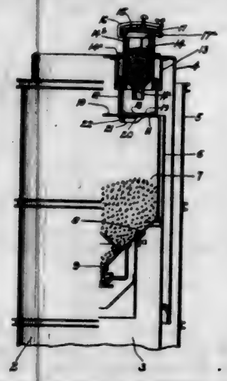


1. A printing machine comprising in combination, a rotatable platen, power means for rotating said platen, feeding mechanism for supplying material to said platen and over which said material slips when its tension is relieved, and means for operating said feeding mechanism at a linear speed in excess of the peripheral speed of said platen.

1,563,015. LAUNDRY APPLIANCE. MAY C. CHRISTY, Cleveland, Ohio; James Christy administrator of said May C. Christy, deceased. Filed Aug. 28, 1923. Serial No. 659,719. 1 Claim. (Cl. 68—20.)

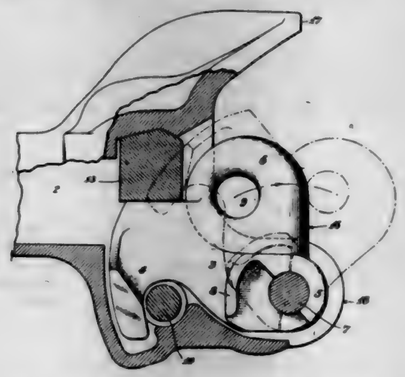
A laundry hand appliance adapted to be used cooperatively with the corrugated surface of a washboard, consisting of a solid flat rubbing block and a thin finely-corrugated rubber-coated sheet of textile fabric affixed to the bottom face thereof.

1,563,016. ACETYLENE GENERATOR. CLAUD J. CLEFTON, Owatonna, Minn., assignor to Ruth P. Clefton, Owatonna, Minn. Filed May 15, 1922. Serial No. 561,244. 3 Claims. (Cl. 48—38.)



1. An acetylene generator comprising a main hopper, a gas bell encircling said hopper, the top of said hopper having a filling opening and otherwise closed, said bell having a filling opening an auxiliary hopper or filling funnel adapted to fit into said filling opening and means mounted to close the filling opening in said main hopper against the passage of air thereto and move to an open position when engaged by said auxiliary hopper or filling funnel.

1,563,017. TRANSITION COUPLER. WALTER E. COFFIN, Cleveland, Ohio, assignor, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 16, 1923. Serial No. 619,340. 6 Claims. (Cl. 213—112.)



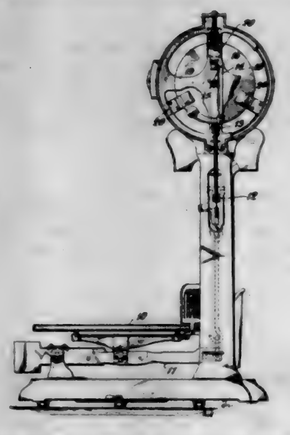
1. In coupler mechanism, an automatic coupler having secured thereto a transitional coupling knuckle arranged to be held in transitional locked position by standard operating mechanism and secured to the coupler by the usual pivot pin, the said knuckle having its pulling part extending rearwardly into the recess in the buffing face of the coupler and having a vertically disposed aperture therethrough for reception of a pulling link, the said pulling link comprising means for attachment to a coupler of a different type.

1,563,018. MIRROR. GEORGE F. COLBERT and WILLIAM H. COLBERT, Pittsburgh, Pa. Filed Sept. 13, 1921. Serial No. 500,290. 1 Claim. (Cl. 88—1.)

A mirror for use on automobiles and for similar purposes consisting of sheet glass having a reflecting coating on its rear surface and a protective backing of waterproof sheet material applied to the said reflecting surface by means of a waterproof adhesive, the said sheet material being substantially coextensive with the said rear surface.

1,563,019. DAMPING DEVICE FOR SCALES. ROBERT CRAIG, Dayton, Ohio, assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Feb. 19, 1921. Serial No. 446,890. 1 Claim. (Cl. 265—54.)

In a weighing scale, in combination, a platform, a scale lever, automatic load counterbalancing means connected thereto, an indicator connected thereto, an element oscillating in unison with the indicator, magnet means having poles in proximity to said element to set up eddy currents therein and damp the oscillations of the indicator upon relative movement of the element and said magnet means, windings upon said magnets, a circuit including said windings, and means



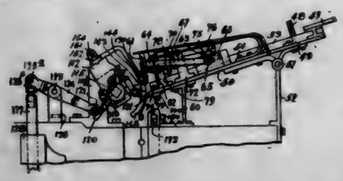
operable upon the application of a load to the scale for closing said circuit and permitting the current to flow through said windings.

1,563,020. PRESERVED FLAVORED MILK DRINK AND PROCESS OF PREPARING SAME. SCOTT J. DAVIS, Oklahoma City, Okla., assignor to E. F. Comegys, Oklahoma City, Okla. Filed Aug. 7, 1922. Serial No. 656,300. 6 Claims. (Cl. 99—11.)

2. The process of producing a chololate flavored milk drink consisting in thoroughly heating chocolate, cow's or goat's milk, and sugar, to substantially 160° F. for approximately fifteen minutes, homogenizing the mixture at a temperature of substantially 160° F. and at a pressure of substantially 2000 pounds per square inch, and thereafter sterilizing the milk.

6. A sterile chocolate flavored milk beverage comprising a mixture of chocolate, sugar and milk, which mixture was preliminarily heated prior to homogenization and sterilization to a sufficient temperature to liquefy the fats, but for a period of time and under conditions insufficient to evaporate any substantial percentage of water, such beverage being substantially stable and having substantially the same fluidity as milk.

1,563,021. MECHANISM FOR HANDLING BLANKS. CHARLES FASSINGER, Carrick, Pa., assignor to Oliver Iron & Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Sept. 7, 1923, Serial No. 661,425. Divided and this application filed July 22, 1924. Serial No. 727,588. 4 Claims. (Cl. 10—166.)

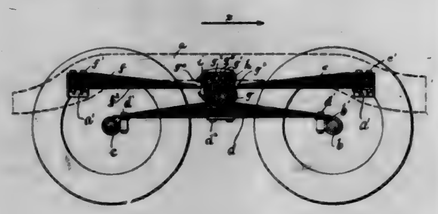


3. Feeding mechanism comprising an inclined feed table, a gate vertically movable above said feed table near its lower end, a lifting member carried by said gate and a carrier adapted to lift said gate, to receive a

blank from said feed table, and to carry said blank to a blank-discharging position, said carrier comprising a shaft, relatively movable jaw members carried by said shaft, means for rocking said shaft to swing said jaw members upwardly, one of said jaw members being adapted to engage beneath the lower end of said feed table and to thereby open the said jaws, and the other jaw being provided with means for engaging said lifting member and for thereby lifting said gate, and means for rocking said shaft in the opposite direction to close said jaws, to permit said gate to descend, and to swing said jaws downwardly to a blank-discharging position.

---

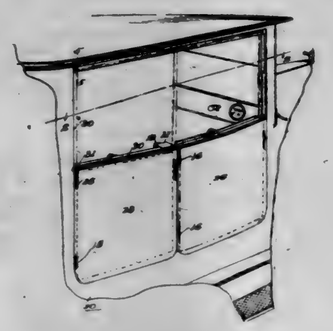
1,563,022. SPRING SUSPENSION. CHARLES FROESCH, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 22, 1925. Serial No. 31,993. 5 Claims. (Cl. 267—45.)



1. In a spring suspension for vehicles having dual axles, a spring secured at its ends to the respective axles, springs carried with the vehicle frame and means to connect the ends of said springs to the first named spring between the ends thereof.

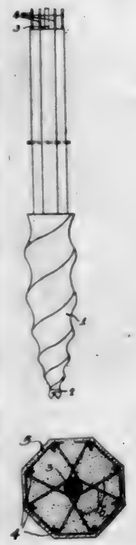
---

1,563,023. CONVERTIBLE BODY FOR AUTOMOBILES. PALEMON H. GASKINS, Jacksonville, Fla. Filed Aug. 6, 1923. Serial No. 655,970. 4 Claims. (Cl. 296—48.)



1. A convertible automobile body having a door provided with a sliding glass panel, an extensible stanchion mounted on the door and connected with one side of the sliding glass panel, a swingable stanchion engaging with the opposite side of the panel in the raised position thereof and foldable down over the top of the panel in the lower position thereof, and a socket aligned with the axis of swing of the door and adapted to rotatably receive the swingable stanchion when the same is engaged with the side of the glass panel.

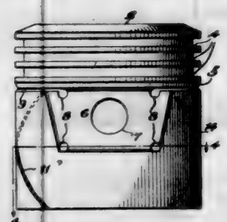
1,563,024. REENFORCED-CONCRETE STAKE. GUSTAVE GRIMAUD, Bouille Courdault par Oulmes, France. Filed Feb. 1, 1924. Serial No. 690,062. 4 Claims. (Cl. 72—84.)



1. A concrete stake having a screw head, an axial reenforcing bar extending therethrough, a plurality of longitudinal bars arranged about the axial bar, spiral binding wires extending around said rod, and a plurality of hook members connecting the axial bar and said rods.

---

1,563,025. PISTON. HARRY JOHN HATER, Cincinnati, Ohio. Original application filed Apr. 24, 1922, Serial No. 556,234. Divided and this application filed Nov. 22, 1923. Serial No. 676,344. 3 Claims. (Cl. 74—108.)

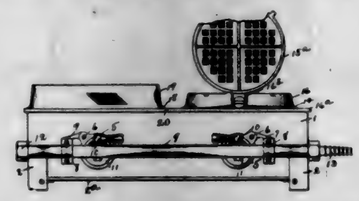


1. A piston comprising a head and a skirt, said skirt having a piston pin opening therein and said skirt having the metal adjacent the piston pin opening cut away or relieved in the form of a keystone.

---

1,563,026. STOVE. JOHN C. HOLLANDS, Erie, Pa., assignor to The Griswold Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Sept. 18, 1922. Serial No. 588,791. 2 Claims. (Cl. 126—40.)

1. In a stove, the combination of a surrounding frame; a plurality of detachable top plates mounted directly on the frame and forming the complete top of the stove, said top plates being interchangeable, one of the top plates having a burner opening therein with a surrounding annular upstanding wall integral with the plate, the plate extending laterally from the up-standing wall without obstruction to the edge of the plate and the up-standing wall having a waffle iron socket in its upper



edge; a waffle iron arranged within the wall and supported by said socket; and a burner under each plate, one of said burners being directly under the waffle iron and having its heat directed upwardly by the upstanding wall.

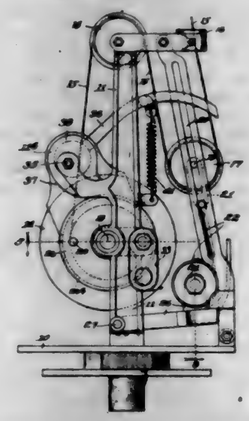
1,563,027. [WITHDRAWN.]

---

1,563,028. CARRIER FOR BRAIDING MACHINES. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich., a Corporation of Michigan. Filed Apr. 18, 1924. Serial No. 707,394. 4 Claims. (Cl. 96—13.)

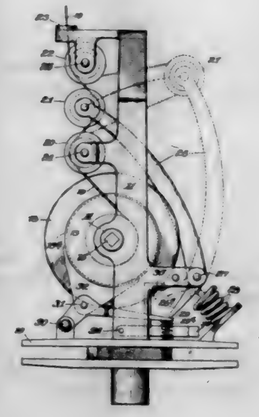


1. In a braider, a carrier comprising a base, standards rising from the base, a brake drum journalled in one of said standards, a brake shoe movable into and out of contact with said drum, a lever arm operably connected to said brake shoe, a spring normally holding said shoe against said drum, a reel operably connected to said drum, and tensioned means over which the wire from said reel passes for engaging said lever to release the brake shoe as the wire is fed.

---

1,563,029. CARRIER FOR BRAIDING MACHINES. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich., a Corporation of Michigan. Filed Apr. 18, 1924. Serial No. 707,395. 4 Claims. (Cl. 96—13.)

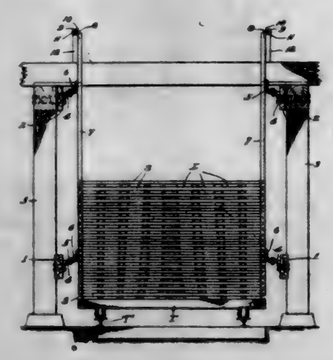
1. In a braider, a carrier comprising a base, means for rotatably supporting a spool thereon, a brake drum operably connected to the spool, two spaced members over which the wire from the spool passes, a lever arm pivotally mounted below the level of the center of said spool, a sheave carried thereby and movable toward and form said members, the loop of wire between said members passing over said sheave, a spring urging said



sheave away from said members, and means operable by said lever arm as it approaches said members for releasing said brake.

---

1,563,030. AUTOMATIC STICK GUIDE. CHARLES A. HUFFMAN, Longview, Wash., assignor to The Long-Bell Lumber Company, Longview, Wash., a Corporation of Missouri. Filed May 26, 1925. Serial No. 32,931. 4 Claims. (Cl. 214—6.)



1. A stick guide for lumber comprising oppositely-facing pivoted guides for receiving the ends respectively of a series of sticks, and adapted under pressure of the sticks when moved laterally to swing outwardly beyond the ends of the sticks to permit the latter to pass from position.

---

1,563,031. SHAVING AND COSMETIC BRUSH. ARCHIE G. JONES, Richmond, Va. Filed Dec. 5, 1924. Serial No. 754,086. 7 Claims. (Cl. 15—184.)

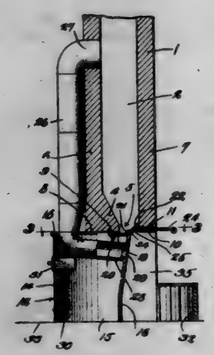
1. In a device of the kind described, a hollow handle, a bristle carrying member mounted in the handle and cooperative elements on said handle and said bristle

carrying member for moving the latter into and out of the handle upon relative rotative movement of the handle and bristle carrying member, said handle being open at

each end whereby the bristle carrying member may be engaged by the finger of the user to effect relative rotative movement of said parts.

---

1,563,032. HEATING DEVICE. CAMERON ARTHUR KIDD, Ansted, W. Va. Filed May 6, 1925. Serial No. 28,454. 2 Claims. (Cl. 126—122.)

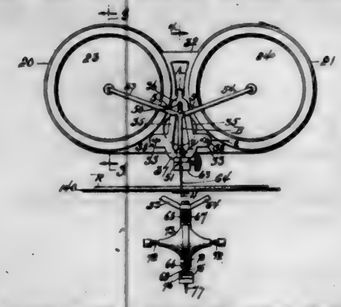


1. In a device of the class described, a partition having a flue, there being a transverse opening in the partition at the lower end of the flue, a drum mounted in one end of the opening and projecting outwardly beyond one side of the partition, means for admitting air into the lower portion of the drum, the drum including a top having an air outlet, a plate forming the back of the drum and forming the back of a fire place in the other end of the opening, the flue communicating with the fire place, a pipe communicating at its upper end with the flue, the lower end of the pipe being prolonged downwardly through the top of the drum and rearwardly within the drum, the lower end of the pipe communicating with the fire place, through the plate; a single damper controlling the passage of the products of combustion from the fire place into the flue, and means for operating the damper.

---

1,563,033. SOUND RECORDING AND REPRODUCING DEVICE. ANDRÉ JUNOD, New York, N. Y. Filed Oct. 3, 1921. Serial No. 504,967. 5 Claims. (Cl. 274—28.)

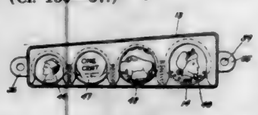
1. In a device of the character described, the combination of a pair of sound boxes, a diaphragm for each sound box, a stylus supporting bracket coacting with the diaphragms, a stylus for the said supporting bracket, the latter when coacting with a vertical cut record vibrating both diaphragms in the same direction and



when coacting with a lateral cut record vibrating the diaphragms in opposite directions.

---

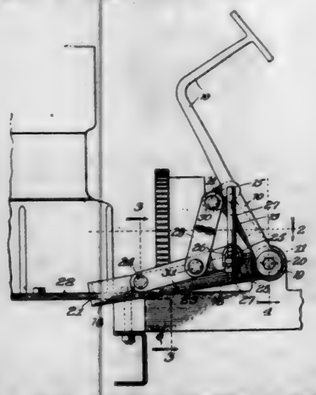
1,563,034. CHANGE CARRIER. JOSEPH L. LEVINE, Brooklyn, N. Y. Filed Feb. 4, 1925. Serial No. 6,737. 4 Claims. (Cl. 150—37.)



1. In combination with a pocketbook, purse, or handbag, a carrier comprising a casing having walls on its sides and ends, a housing adapted to slip into said casing, walls on one side and both ends integral with the housing, the walls of the housing lying adjacent the walls of the casing and within the latter, platforms slidable in the casing and housing forming coin elevators and conical spiral springs mounted beneath the platforms and adapted to lift the latter, and walls rigid with the casing formed by bending the same at an angle to their normal plane for providing separating elements between the platforms.

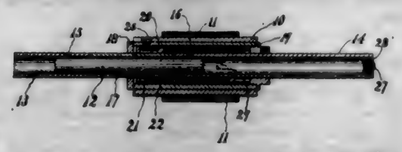
---

1,563,035. CLUTCH-OPERATING MECHANISM. JOSEPH S. LOSER, Hebron, Ill. Filed June 22, 1925. Serial No. 38,750. 5 Claims. (Cl. 74—81.)



1. In a clutch operating mechanism, a clutch operating shaft, a lever secured to said shaft, a clutch pedal journalled on said shaft, a stationary member, an arm hingedly connected thereto at one end, a rod hingedly connecting the opposite end of said arm and said clutch pedal, and a link hingedly connecting the end of said lever and a point on said arm intermediate its previously mentioned hinge points.

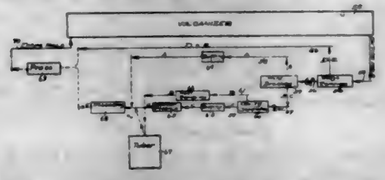
1,563,036. TENSION GRIP. FREDERIC L. MACALESTER, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 31, 1920. Serial No. 355,406. 12 Claims. (Cl. 242—7.)



1. A device of the character described comprising a pair of handles, a releasing handle rotatable with respect to the first named handles, a helically wound friction band one end of which is secured to one of the first named handles and the other to the releasing handle, a sleeve inclosing the friction band and secured against axial motion relative thereto, and a rag holding sleeve releasably secured to the first mentioned sleeve.

---

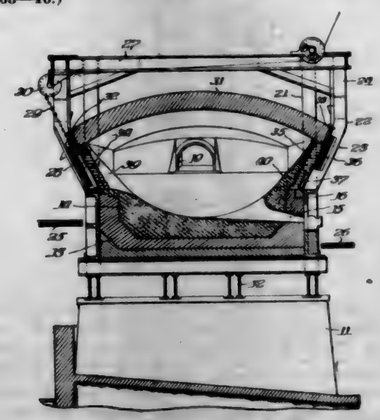
1,563,037. VULCANIZATION APPARATUS. GEORGE J. MEAD, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 3, 1921. Serial No. 449,526. 11 Claims. (Cl. 18—4.)



1. The combination of means for advancing a series of molds along parallel paths and means for simultaneously guiding and heating said molds during said advance.

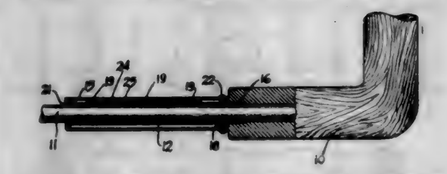
---

1,563,038. METHOD OF MAINTAINING OPEN-HEARTH-FURNACE WALLS. SAMUEL NAISMITH, Chicago, Ill., assignor to Open Hearth Combustion Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 10, 1924. Serial No. 748,963. 7 Claims. (Cl. 263—46.)



1. In an open hearth furnace or the like, a back wall inclining upwardly and outwardly throughout its extent at such an angle that the furnace lining material will lie on the wall surface and a furnace lining extending up said inclined wall substantially throughout its extent.

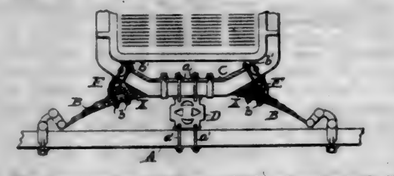
1,563,039. UMBRELLA-IDENTIFICATION MEANS. CLAIR DHU NEWELL, San Francisco, Calif. Filed Oct. 11, 1923. Serial No. 668,026. 3 Claims. (Cl. 40—19.)



1. In an identification device adapted to be applied to the handle rod of an umbrella and attached to the handle thereof, in combination, a bendable sheet of metal having one end thereof serrated and having an opening therein, the serrations being capable of insertion within the handle when the sheet is bent around the rod, means carried by the sheet for maintaining an identification card in fixed relation to the opening and a revoluble sleeve surrounding the bent sheet having an opening therein capable of revoluble alignment with the sheet opening.

---

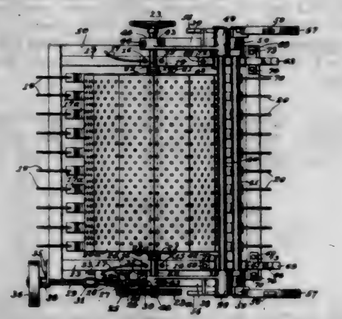
1,563,040. SHOCK ABSORBER. CLARENCE S. PRESTON, San Diego, Calif. Filed July 25, 1923. Serial No. 653,726. 5 Claims. (Cl. 267—30.)



1. The combination with a vehicle chassis, including a main supporting spring, of a shock absorber comprising a body of resilient material, a core of resilient material in the center thereof and running transversely therethrough, said body having voids arranged about said core and running parallel therewith, elastic webs suspended between the voids adjacent the central resilient core, whereby when said body of resilient material is subjected to shock the solid material thereof will be forced into the said voids, and means, comprising straps passing through said resilient body, for fastening the same to the adjacent portion of the chassis.

---

1,563,041. ELECTROPLATING APPARATUS. FORREST G. PURINTON, Waterbury, Conn. Filed Sept. 7, 1923. Serial No. 661,340. 17 Claims. (204—11.)

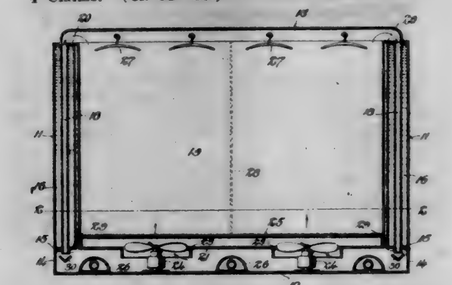


1. In an electroplating apparatus, a plating tank, a frame adapted to rock upon said tank, means to support said frame in equilibrium in separate plating, draining and dumping positions, a rotary plating barrel carried by said

frame, a counterweight secured to said frame to counterbalance the weight of said barrel and contents, whereby said barrel will remain in equilibrium in its plating, draining, and dumping positions.

---

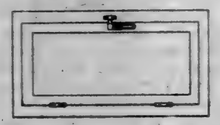
1,563,042. DRYING DEVICE. JOHN S. RONEY, Middletown, Ohio. Filed Mar. 24, 1924. Serial No. 701,544. 4 Claims. (Cl. 34—19.)



2. In a device of the character described, a receptacle adapted to receive damp or wet articles to be dried, means for forcing heated air or gas through said receptacle thereby to dry articles contained therein, a cooling device for precipitating moisture from said air or gas, after the same has been forced through said receptacle, means to convey the moisture precipitated from said air or gas to a point of discharge, and flanges on said cooling device or devices to direct moisture precipitated from said air or gas into said conveying means.

---

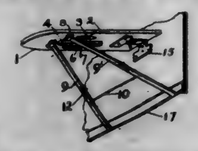
1,563,043. LOCKING DEVICE FOR SKYLIGHTS AND THE LIKE. KARL ROSENHEIM, Frankfort-on-the-Main, Germany. Filed Jan. 19, 1925. Serial No. 3,511. 4 Claims. (Cl. 292—164.)



1. In a locking device for skylights and the like, a housing, a locking bolt slidably mounted therein, a spring for normally holding the bolt in locking position, an operating handle having an open hook to engage the spring, the spring being extended beyond the housing to permit the free engagement of the open hook with said spring, the housing being formed with means to prevent the separation of the hook and spring when the former has been moved to spring operating position within the housing.

---

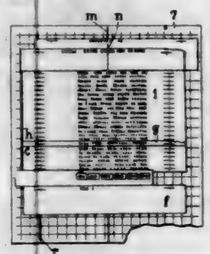
1,563,044. FOLDING WALL-MOUNTED IRONING BOARD. EARL V. SANDERS, Pawnee, Ill. Filed June 9, 1923. Serial No. 644,462. 1 Claim. (Cl. 68—10.)



In a device of the character described, the combination of a hingedly folding wall mounted ironing board, with a centrally disposed stiffening bar, detachably secured near the hinged joint in said ironing board, and hingedly jointed supporting legs, normally positioned divergingly downward, and adapted to rest against the line of the wall, and floor intersection, means provided for securely spacing said diverging support legs in a pre-determined relative position, means further provided in a detachable hinge pin, for optionally dismounting said ironing board from its normally hinged position on the wall.

---

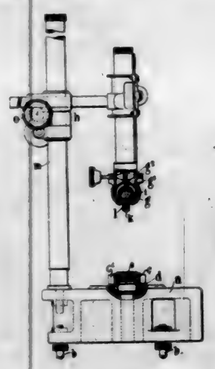
1,563,045. METHOD FOR PRODUCING SHEETS FOR PHOTOGRAPHIC REPRODUCTIONS, REPRODUCTIONS BY REFLECTED LIGHT AND THE LIKE. WERNER SCHÄFFER, Laupen-Bern, Switzerland, assignor to Polygraphische Gesellschaft, Laupen-Bern, Switzerland. Filed Oct. 22, 1923. Serial No. 670,031. 20 Claims. (Cl. 95—5.)



1. In a method of producing a reproduction sheet with a plurality of lines of characters, cutting the sheet transversely, and inserting a strip with a correct line of characters so that the strip and the sheet overlap.

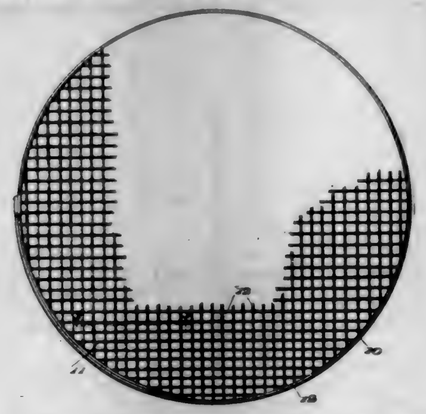
---

1,563,046. METHOD OF AND APPARATUS FOR MEASUREMENT AND/OR STANDARDIZATION. JOHN EDWARD SEARS, JR., and ARTHUR JOHN CHARLES BROOKES, Teddington, England; said John Edward Sears, jr., assignor to said Arthur John Charles Brookes, Bridgnorth, England. Filed Aug. 31, 1920. Serial No. 407,194. 6 Claims. (Cl. 33—143.)



6. Apparatus for the measurement or standardization of lengths comprising a base of relatively large mass, means for horizontalizing said base, a table mounted upon said base for supporting two or more columns to be measured or compared and said table being capable of accurate rotation in its own plane, a standard carried upon said base, a level, means whereby said level is supported from said standard and means whereby said level may be brought into contact with said columns so that it rests thereon under the influence of gravity alone and is restrained only from axial rotation by said means.

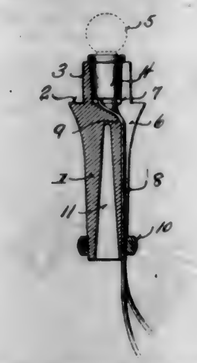
1,563,047. SAND RIDDLE. MITCHELL J. SOMERS, Springfield, Ohio. Filed May 9, 1925. Serial No. 29,169. 1 Claim. (Cl. 83—56.)



A screen for sand riddles consisting of a body formed of woven wire having regularly spaced apart upset portions leaving approximately flat portions of the screen between the upset portions and forming with said flat portions relatively sharp angles, said upset portions serving the double function of breaking up sand particles and reinforcing the screen and each upset portion presenting a plurality of faces and relatively sharp angles between the faces.

---

1,563,048. ELECTRIC-LIGHT HOLDER FOR CHRISTMAS TREES. GEORGE V. STIEN, Stevens Point, Wis. Filed Apr. 13, 1925. Serial No. 22,767. 2 Claims. (Cl. 248—42.)

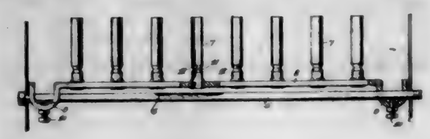


1. A holder for Christmas tree lights comprising a body portion having an elongated tapered aperture therein for the reception of the stem of a tree, said holder having an upwardly extending shell for the reception of the light socket and having a slot cut in one side thereof from one end to the other for the reception of the cables from said socket, and means for holding said cables in position within said slot.

---

1,563,049. GAS BURNER. AUGUSTUS FRANKLIN THOMPSON, Huntington, W. Va. Filed June 11, 1925. Serial No. 36,400. 1 Claim. (Cl. 158—104.)

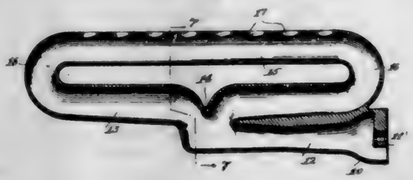
A gas-burner of the type herein disclosed embodying a bar supporting a plurality of burner-tubes and having each of its ends bent upon itself to form a U-shaped member, the two legs of each of these members being



provided with corresponding holes, a supply-pipe extending through said holes, and set-screws for removably holding the gas-pipe in said U-shaped members.

---

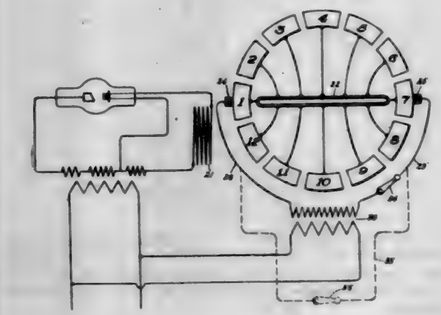
1,563,050. GAS BURNER. AUGUSTUS F. THOMPSON, Huntington, W. Va. Filed June 11, 1925. Serial No. 36,401. 1 Claim. (Cl. 158—104.)



In a burner of the type set forth, an elongated elliptical mixing-chamber consisting of two parallel tubes joined at their ends by curved connections, one of the tubes being provided with a series of burner-tip-holes along its length and the other tube being provided with a gas-and-air inlet midway of its length, a gas-and-air injector connected with said inlet, the tube wall opposite said inlet being extended inwardly to form a double deflector, for the purpose set forth.

---

1,563,051. REGULATOR FOR INCLOSED ELECTRICAL APPARATUS. ELIHU THOMSON, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 11, 1923. Serial No. 667,952. 7 Claims. (Cl. 250—34.)

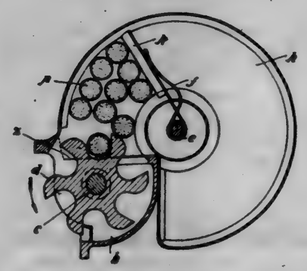


7. An electrical device comprising a sealed tank, an electrical discharge device contained therein having a cathode operable at incandescence, circuit connections in said tank for furnishing an alternating current to said cathode, an inductance coil in said heating circuit, an external inductance coil in inductive relation thereto,

a commutator having connections to different sections of said winding, and means connected in adjustable relation to said commutator for furnishing an alternating current in phase with said heating current.

---

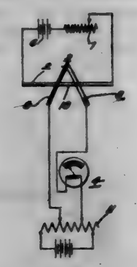
1,563,052. CARTRIDGE-FEED MECHANISM. HEINRICH VOLLMER, Wurttemberg, Germany. Filed Aug. 3, 1925. Serial No. 47,861. 3 Claims. (Cl. 89—33.)



1. A cartridge feed mechanism for automatic fire-arms, comprising a cartridge magazine substantially circular in cross-section and having a gap therein substantially equal to a quadrant thereof; said magazine having an aperture opening into said gap; and means projecting through said aperture into the magazine and adapted to discharge the cartridges through the aperture.

---

1,563,053. THERMOCOUPLE BULB FOR ELECTRICAL MEASURING APPARATUS. JAMES L. WEATHERWAX, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of New Jersey. Filed May 24, 1921. Serial No. 472,164. 6 Claims. (Cl. 175—183.)

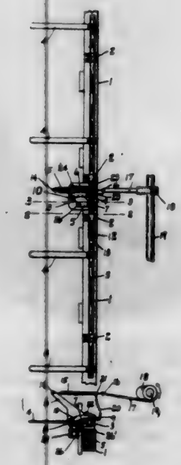


1. In a thermal bulb for a measuring instrument, the combination with a current-conducting element serving as a heating element, of a thermocouple having each element thereof secured intermediate its ends to the heating element.

---

1,563,054. PILE DELIVERY FOR PRINTING PRESSES. JOSEPH C. WELAGE, Cincinnati, Ohio. Filed Sept. 27, 1924. Serial No. 740,320. 3 Claims. (Cl. 271—89.)

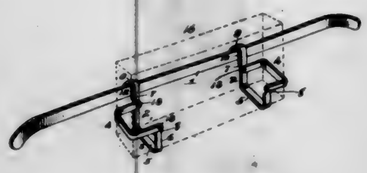
1. In an attachment for printing presses of the character described, in combination with the rear jogger and the cam or fly shaft of the said press and pile delivery mechanism, of a shaft supported on the rear jogger, guard fingers, attached to said shaft, means for oscillating said shaft, said guard fingers moving with said shaft as the same is oscillated, to bring said guard fingers down



upon the pile as each sheet is delivered by the fly delivery mechanism, and raising said fingers off of said pile at a predetermined time, to allow the fly delivery mechanism to deliver the next sheet.

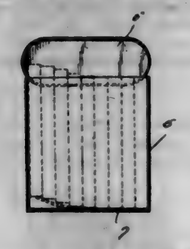
---

1,563,055. BAGGAGE CARRIER. WALTER L. WHALLON, Zanesville, Ohio. Filed Jan. 3, 1924. Serial No. 684,203. 3 Claims. (Cl. 224—29.)



1. A luggage carrier for motor vehicle bumpers embodying a pair of supporting appliances each embodying a stirrup-shaped member one of whose vertical bars is provided with a hook adapted to engage slidingly over the bumper bar to thus suspend the two stirrups in horizontal alinement on the bumper-bar, each stirrup being provided with a retaining-loop of stirrup shape having its ends pivoted on a horizontal axis to the aforesaid upright members of the hanger-stirrup, these retaining-loops being adapted to be swung to horizontal position toward either side and to be arranged, when not in use, in alinement with the hanger-stirrup, for the purposes set forth.

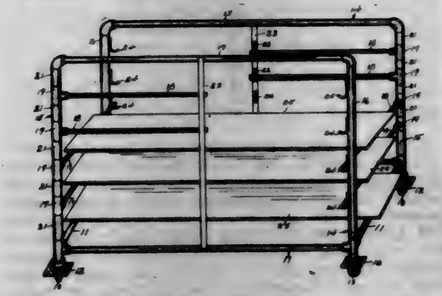
1,563,056. CONTAINER. CLARENCE E. WILLIAMS and JOHN B. STOUT, Bridgeport, W. Va. Filed June 16, 1924. Serial No. 720,260. 2 Claims. (Cl. 206—56.)



1. In a container of the character described, a tongue formed in the bottom wall of said container and adjacent one end thereof, whereby certain of the contents of the container may be discharged by pressing inwardly upon said tongue.

---

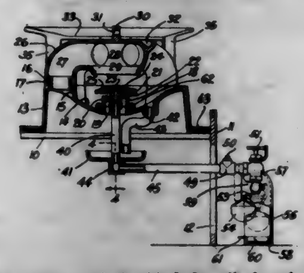
1,563,057. HANDLING TRUCK. JOB J. WILLIAMS, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 3, 1922. Serial No. 558,312. 2 Claims. (Cl. 211—14.)



1. A truck comprising a rectangular base, uprights at each corner of said base, arms hinged on each of two diagonally opposite uprights, said arms adapted for individual and independent movement, hooks on the remaining uprights to support the free end of said arms in operative position across the ends of the truck and means disposed at the sides of said truck to retain said arms when in inoperative position.

---

1,563,058. BURNER. WALTER E. WOLLHEIM, New York, N. Y. Filed Jan. 7, 1924. Serial No. 684,752. 12 Claims. (Cl. 158—91.)



11. In a burner of the kind described, a base having a bowl shaped top, a central oil supply nipple connected to the base, an overflow nipple screwed into the said bowl shaped top from the bottom of the base, at a point higher than its lowest portion, an overflow pan of open cup shape connected centrally with the said oil supply nipple, the said overflow nipple being bent over within the said base to run closely and parallel to the said oil supply nipple and to terminate slightly above, but within, the cup of the said overflow pan, and an oil supply pipe and an overflow pipe screwed in angular relation to the said oil supply nipple, directly into the said pan, the said pan having ducts communicating, respectively, the oil supply pipe with the said oil supply nipple, and the overflow pipe with the said open cup.

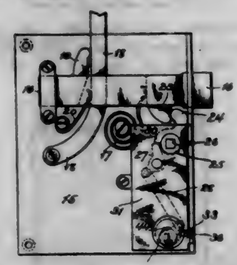
---

1,563,059. DISK WHEEL. ELMER L. ACKER, Chicago, Ill. Filed May 15, 1922. Serial No. 561,106. 1 Claim. (Cl. 301—9.)

In combination with a wheel rim and a wheel hub having an outwardly extending flange, a relatively thick solid adapter disposed on the hub in intimate contact therewith throughout its thickness and to an extent substantially equal to the width of the rim and abutting said flange, means securing said adapter to said flange, the outer surface of the adapter adjacent its marginal edge inclining toward the plane of the hub flange, and a disk supporting said rim, said disk intimately fitting and being secured against the outer surface of said adapter and having a portion disposed at substantially the same inclination as said inclined surface directly engaging the latter and extending inwardly to an extent substantially equal to the width of the rim.

---

1,563,060. AUTOMOBILE DOOR LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Original application filed June 30, 1922, Serial No. 572,004. Divided and this application filed June 16, 1923. Serial No. 645,796. 1 Claim. (Cl. 70—29.)



In a lock for automobile doors, the combination of a spring projected latch bolt, outside means for retracting said bolt, a deadlocking dog for said outside retracting means, a pitman connected with said dog, a pin tumbler lock, and connecting means between the plug of said

pin tumbler lock and the pitman, the said connecting means comprising a cam permanently connected with said pitman, a bar between said cam and the plug of the pin tumbler lock said cam a pin-and-slot connection between said bar and plug.

---

1,563,061. OBTAINING VANADIUM VALUES, ETC. EMILE L. BALDESCHWIELER, New York, N. Y., assignor to Standard Development Company, a Corporation of Delaware. Filed Aug. 4, 1923. Serial No. 655,746. 7 Claims. (Cl. 23—18.)

7. The improvement in the art of obtaining vanadium, which comprises treating petroleum ash with an alkaline agent for removing the vanadium.

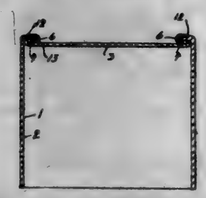
---

1,563,062. AUTOMATIC THERMOREGULATOR FOR BOILERS AND OTHER FURNACES. THOMAS L. BARKER, Philadelphia, Pa., assignor to Philadelphia Steam Heating Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 11, 1922. Serial No. 574,314. 2 Claims. (Cl. 200—100.)

1. In a device of the character stated, a magnetic switch composed of a base and upright ends, a hollow tube having its terminals seated in said ends, solenoid magnets wound on the outer ends of said tube, rods above said magnets having their outer terminals secured in said upright ends, stationary contacts mounted on and insulated from the outer portions of said rods, insulated blocks slidable on said rods intermediate said stationary contacts, a movable contact carried by said blocks, arms depending from said blocks, said blocks, contact and pendant arms moving as a unit, an armature in said tube, a transverse pin in said armature projecting through slots in said tube, and a switch lever engaging said pin, the latter being adapted to contact with and actuate said pendant arms and moving contact when said armature is attracted to either of its extreme positions by the energising of either of said magnets.

---

1,563,063. PAPER CONTAINER. GEORGE H. BARTLETT, San Francisco, Calif. Filed Apr. 26, 1922. Serial No. 556,696. 1 Claim. (Cl. 229—5.6.)



A paper can comprising a tubular body member having an end flange turned inwardly at right angles to the sides, a disk end closure turned upon itself to form a double thickness of material around its edge positioned within the can and with the doubled edge supported against the inwardly turned flange of the body, the edge of the disk continuing around the inner edge of the said flange and then being turned outwardly terminating within the inner diameter of the body member and compressed into the flange to form a substantially flush juncture and outer surface therewith.

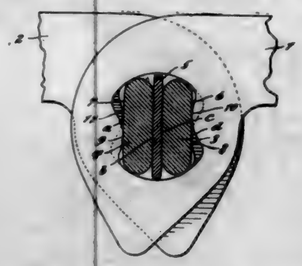
---

1,563,064. SCREW DRIVER. CLARENCE ALBERT BEARDMORE, Annapolis, Md. Filed Dec. 28, 1923. Serial No. 683,232. 4 Claims. (Cl. 145—52.)

2. A screw driver comprising a bit including a pair of blades which at their screw engaging ends are normally urged into inherently engaged relation, a pin member slidable longitudinally within a passageway provided through said bit, a cross pin movably carried by said bit for sliding longitudinally of the bit into cooperating relation with said pin, and a nut adjustable longitudinally of said bit for engaging said cross pin upon movement of the nut toward the blades whereby to force the same longitudinally of the bit into engagement with said first mentioned pin to move the latter into engagement with the blades for relatively expanding them at their screw engaging ends.

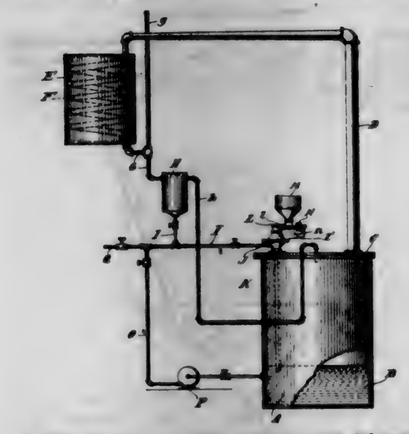
---

1,563,065. CHAIN AND PARTS THEREFOR. WARREN J. BELCHER, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Oct. 31, 1923. Serial No. 671,838. 5 Claims. (Cl. 74—32.)



5. In a chain of the link type, a pin combrising two members having rectangular cross section placed side by side, a wear plate between said members, and curved surfaces on the links engaging said pin members.

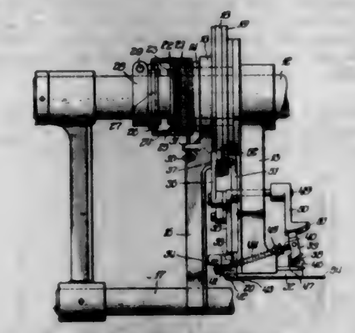
1,563,066. PROCESS OF FEEDING SOLIDS OR SEMI-SOLIDS TO CHEMICAL APPARATUS. GEORGE A. BERRY, Somerville, N. J. Filed Aug. 9, 1920. Serial No. 402,167. 4 Claims. (Cl. 260—172.)



1. The process of feeding solid or semisolid material into a treating receptacle in which vapor is being generated, which consists in leading off vapor from the receptacle condensing the vapor, causing the condensate to flow back into the receptacle, and introducing the material into the path of the condensate so that it is commingled with the condensate and carried thereby into the receptacle.

---

1,563,067. SHEET-GUIDE ADJUSTMENT. JOSEPH R. BLAINE, Oak Park, Ill., assignor to Miehle Printing & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 24, 1921. Serial No. 494,994. 9 Claims. (Cl. 271—52.)

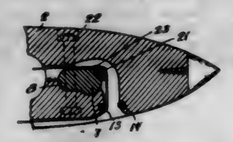


1. In a printing press, the combination of a side gauge for registering sheet material, a shaft by which said side gauge is swung, and means on said shaft and operative coaxially therewith for adjusting the position of said gauge longitudinally of said shaft.

---

1,563,068. SELF-THREADING SHUTTLE. HENRY L. BONNEY, North Andover, Mass., assignor of one-half to George Gibson Brown, Lawrence, Mass. Filed Nov. 6, 1923. Serial No. 673,083. 4 Claims. (Cl. 139—220.)

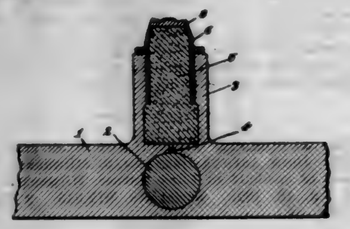
1. A self-threading shuttle having a slotted side-delivery eye and a thread passage leading longitudinally from the bobbin chamber and transversely to said eye, a threading block disposed in the rear of the transverse portion of the passage and comprising an upright shank having a horizontally projecting beak at its upper end, a thread guide post mounted in the lower end of said shank at the vertex of the angle between said passage portions to cause the thread to be drawn against said post as it is drawn to said eye,



said shank being recessed in the rear of the thread engaged portion of the post and having thread tensioning material inserted therein and extending into the line of the thread as it is drawn about the post to engage the thread before and after it is drawn past the same and cause a drag on thereon at each point of engagement.

---

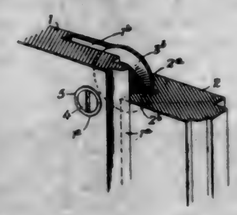
1,563,069. GREASE PLUG AND WRENCH. GEORGE M. BRADRICK, Los Angeles, Calif., assignor of one-half to Carmah E. Hodges, Springville, Calif. Filed Dec. 13, 1923. Serial No. 680,403. 4 Claims. (Cl. 184—48.)



3. A hollow grease plug consisting of a piece of pipe externally screw threaded and having one end crimped into a form resembling a cross or a star and welded to close the end.

---

1,563,070. CLAMPING DEVICE FOR COMBINATION STORM AND SCREEN DOORS. HAROLD L. BRANDAU, Muscatine, Iowa, assignor to Huttig Manufacturing Co., Muscatine, Iowa, a Corporation of Iowa. Filed Apr. 30, 1925. Serial No. 27,011. 5 Claims. (Cl. 292—240.)

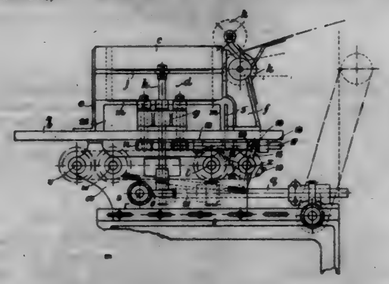


1. Means for securing a panel having a groove in its edge, in a door having a slot adapted to register with the groove in the panel when the latter is in place; said means comprising a beveled edge member adapted to be inserted in the slot and in one position to have its beveled edge engage the groove in the panel and clamp the latter in position; a rotatable stud extending into the slot and detachably engaging the disk, and

whereby the latter is retained in place in the slot and also may be rotated to cause its beveled portion to engage or disengage the groove in the panel; and means to retain the stud in place.

---

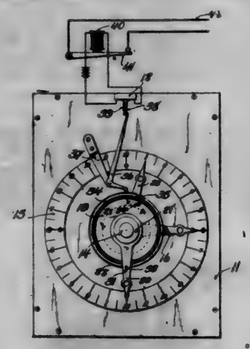
1,563,071. COLLECTOR FOR ARTICLES ON DELIVERY FROM PRINTING, PUNCHING, AND LIKE MACHINES. HENRY EDWIN FRANK BRECKNELL, Bristol, Gloucester, England; assignor to Brecknell, Munro & Rogers Limited, Bristol, Gloucester, England. Filed Dec. 29, 1923. Serial No. 683,453. 5 Claims. (Cl. 93—93.)



1. A collector comprising a receiving platform, consisting of at least one horizontally rotating sector, means for placing each article on the platform, guides for locating the article on the platform, means for moving the receiving platform to allow each article to fall separately, rotatable members forming a collecting platform, and guides below the receiving platform.

---

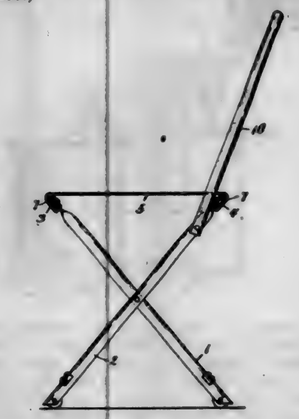
1,563,072. AUTOMATIC SWITCH FOR ELECTRIC CIRCUITS. JOHN ARTHUR BRENNEMAN, Milwaukee, Wis., assignor of one-half to Edna Turner, Milwaukee, Wis. Filed Jan. 16, 1923. Serial No. 612,945. 2 Claims. (Cl. 200—38.)



1. The combination of a clock, a shaft rotated thereby, a dial, a hand cooperating with said dial to indicate the time, an inner disk rigid with said shaft, an outer disk, means for securing said outer disk in different angular positions with respect to said inner disk, said outer disk having a groove therein and an opening extending from its cylindrical surface to said groove, a pointer carried by said shaft, a spring extending thru said opening into said groove and lying thruout a part of its length on the exterior surface of said disk, said spring being secured at its outer end to said pointer, means for securing said pointer in different angular positions with respect to said outer disk, a bell crank lever, means pivotally supporting said lever, one arm of said lever being disposed in cooperative relationship with said outer disk, whereby on the rotation of said outer disk, said spring is operative to actuate said lever, and means operative on the movement of said lever for closing an electric circuit.

---

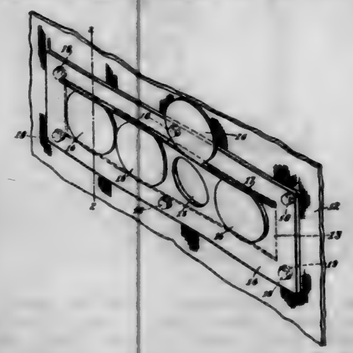
1,563,073. FOLDING CAMP CHAIR. JULIUS L. CABLE, Boston, Mass., assignor to The Cable Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1924. Serial No. 750,765. 4 Claims. (Cl. 155—187.)



1. A folding chair having a pair of semi-tubular metal cross bars, two pairs of pivotally connected crossed legs, each having an ear at its upper end extending between the corresponding end portions of the sides of said bars respectively, the portions of the sides of each bar between said legs being inturned to form retaining lips, a seat consisting of a textile strip having each end portion extending into one of said bars between the lips thereof and between one of its sides and the ears of the corresponding pair of legs, said strip having thickened end portions for engaging the inner sides of said lips and means for securing the end portions of the sides of the bars and the intervening ears and strip portions together.

---

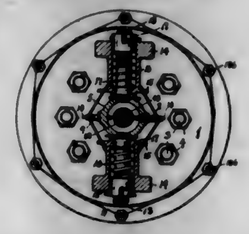
1,563,074. ACTINIC-RAY CHARTING DEVICE. DR FOREST B. CATLIN, Boston, Mass. Filed Jan. 7, 1925. Serial No. 1,133. 2 Claims. (Cl. 174—177.)



1. A charting device for actinic treatment of the skin comprising a major intercepting screen, adapted to be applied to a surface of the human body, and provided with a plurality of independent openings each adapted to expose a limited portion of said surface, and a corresponding plurality of minor intercepting screens, movably connected with the major screen, and each adapted to cover or expose one of said openings.

---

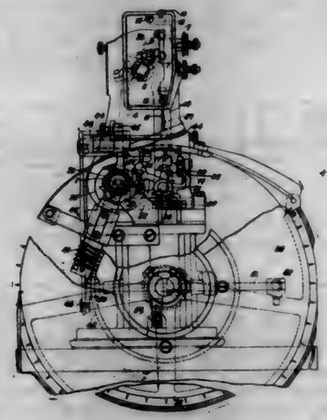
1,562,075. GOVERNOR. THOMAS E. CLARK and JAMES E. CLARK, Detroit, Mich., assignors to Continuous Train Control Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 9, 1924. Serial No. 719,002. 10 Claims. (Cl. 246—182.)



5. In a governor, the combination of a vehicle wheel, weights mounted thereon adapted to be moved outward by centrifugal force, springs to move the weights inward, a switch for each weight adapted to be opened thereby when moving outward, conductor rings adjacent said weights and means to prevent the rings from rotating, contacts rotatable with said wheel and in contact with the rings, and conductors to carry current to said rings and from the contacts to the switches.

---

1,562,076. SEWING MACHINE. HERBERT CORBALL, Helensburgh, and BERTRAM AMBROSE STEVENS, Clydebank, Scotland, assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 11, 1920. Serial No. 416,147. 5 Claims. (Cl. 112—203.)



3. In a sewing machine, a main shaft, a pendulous carrier pivoted on an axis parallel to said shaft, a needle-bar mounted for reciprocation in said carrier, a looper sustained by said carrier, a feeding member rotatable around an axis parallel to said shaft, positively acting connections between said shaft and said feeding member for imparting continuous rotary movement to said feeding member, and a cam on said shaft for oscillating said carrier about its pivot.

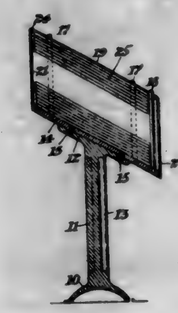
---

1,563,077. FABRICATED STRUCTURAL MEMBER. GEORGE H. DANFORTH, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1924. Serial No. 703,652. 10 Claims. (Cl. 189—37.)

1. A rolled shape having straight continuous margins and an open work web strengthened by longitudially extending stiffening bars rigidly secured to the web members on opposite sides above its middle axis.

---

1,563,078. DISPENSER FOR NAPKINS AND THE LIKE. GEORGE G. ERDOS, Brooklyn, N. Y., assignor to Independent Paper Mills Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 14, 1923. Serial No. 631,991. 8 Claims. (Cl. 211—29.)



1. In a device for dispensing sheets of paper and like material, an inclined base adapted to support a pile of superimposed sheets placed thereon, and a cover device adapted to extend over and to rest upon the top of the said superimposed pile of sheets, and having an opening therein whereby a portion of the outermost sheet adjacent the said opening in the cover is caused to separate from the next adjacent sheet, thereby facilitating the withdrawal of the outermost sheet from the superimposed pile thereof.

---

1,563,079. ALLOY. CHARLES ALEXANDRE FONTANE, Paris, France, assignor to Emile Conti, Alfortville, France. Filed Feb. 2, 1924. Serial No. 690,302. 1 Claim. (Cl. 75—1.)

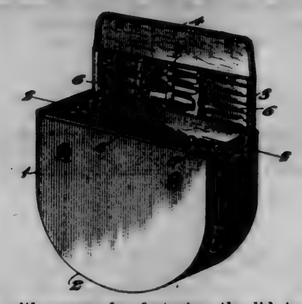
An alloy consisting of:—95 to 96% aluminium, 4 to 3% copper, 0.8 to 0.2% manganese, 0.2 to 0.8% silver.

---

1,563,080. COMBINATION HAT CARRIER AND OVERNIGHT BAG. HARRY S. FORST, Philadelphia, Pa., assignor to Hugo Barol, Philadelphia, Pa. Filed Nov. 8, 1923. Serial No. 673,425. 3 Claims. (Cl. 206—8.)

1. A hat carrier and overnight bag consisting of a body having front and rear walls which are flat and which are arranged in parallelism, and side walls which are flat

for a portion of their extent and which terminate in a rounded bottom, a flat covering lid, and a foldable flap on



the lid with means for fastening the lid to the body, said body having on an inner side thereof receiving pockets for travelling convenience.

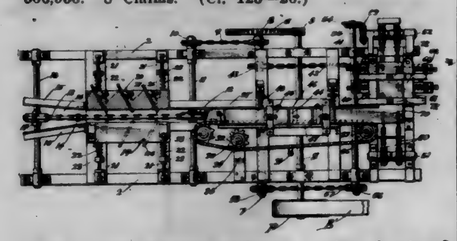
1,563,081. BRICK-CLEANING MACHINE. SAMUEL M. FUNK, Decatur, Ill. Filed June 9, 1922. Serial No. 566,953. 8 Claims. (Cl. 125—26.)



1. In a brick cleaning machine, a series of sets of scraping mechanisms, and continuously acting conveyor means for advancing continuously on a longitudinal edge the bricks to be cleaned successively from one mechanism to another along the series so that parallel faces are concurrently subjected to a scraping and cleaning action to remove adhering mortar.

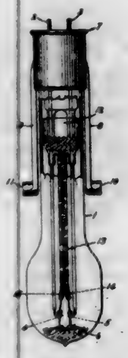
---

1,563,082. PUMP. HENRY M. GREEN, Los Angeles, Calif., assignor to Earl P. Hopkins, Council Bluffs, Iowa. Filed June 22, 1922. Serial No. 570,248. 13 Claims. (Cl. 103—225.)

1. A pump plunger including a central tubular member, a shell surrounding and attached to said member and providing an open top chamber for the reception of a packing medium which is adapted to be expressed from said chamber to expand outwardly against a contiguous surface in a pump tube, and means for expressing the packing medium from the said shell when said means is held at rest and the plunger is lowered relatively.

---

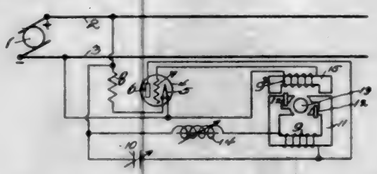
1,563,083. ELECTRIC ARC DEVICE. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 27, 1922. Serial No. 590,981. 6 Claims. (Cl. 176—45.)



1. An electric discharge device comprising a sealed envelope, solid electrodes therein, a body of liquid conductive material adjacent said electrodes, and means constructed to receive a part of said material when the device is tilted and providing a conduit whereby the received material may be projected to bridge the gap between said electrodes when the device is restored to an operating position after having been tilted.

---

1,563,084. SYSTEM FOR OPERATING ALTERNATING-CURRENT MOTORS FROM DIRECT-CURRENT SOURCES. JESSE HARRIS, La Fayette, Ind., assignor to Duncan Electric Manufacturing Company, La Fayette, Ind., a Corporation of Illinois. Filed May 5, 1924. Serial No. 711,054. 4 Claims. (Cl. 172—275.)

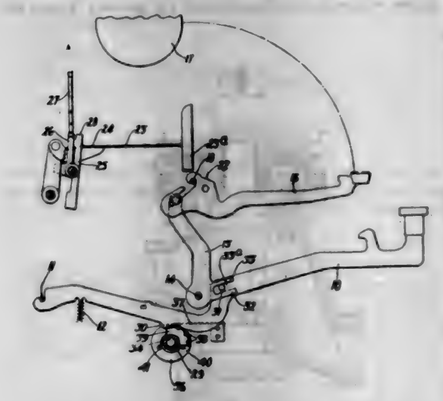


1. The combination with a source of direct current; of a thermionic valve employing a heating element, an output electrode, and a grid; and a motor including a winding connected between the source of direct current and the output electrode of the valve and a winding in secondary relation to the aforesaid winding and having one terminal connected with the grid of the valve and its other terminal connected with the source of direct current.

---

1,563,085. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1922. Serial No. 533,222. 4 Claims. (Cl. 197—27.)

1. In a typewriting machine, the combination of a platen, key-levers, type-bars, bell-cranks connecting the key-levers with said type-bars, a revoluble stop disposed beneath the key-levers to arrest them, each bell-crank having a lost-motion connection with its key-lever to allow the type-bar to travel by its attained



momentum to print against the platen after the key-lever has been arrested, and means to adjust said stop about its axis to vary the distance the type-bar may travel after the key-lever has been arrested.

---

1,563,086. MORPHINE SOLUTION. CHARLES W. HOOPER, Jamaica, N. Y., assignor to H. A. Metz Laboratories, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 8, 1924. Serial No. 742,425. 15 Claims. (Cl. 167—7.)

1. A solution of morphine containing a sulphur reducing agent to stabilize and prevent oxidation of the morphine.

15. A sterile stable solution of morphine in water containing novocaine and magnesium sulphate and sodium bisulphite in the proportion of about 100 c. c. of water, about 0/5 gram morphine, 2.5 gram of novocaine, about 50 grams of magnesium sulphate and about 0.1 gram of sodium bisulphite.

---

1,563,087. ANALGESIC AGENT AND METHOD OF PREPARING THE SAME. CHARLES W. HOOPER, Jamaica, N. Y., assignor to H. A. Metz Laboratories, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1925. Serial No. 3,950. 8 Claims. (Cl. 167—7.)

1. An analgesic agent comprising a sterile aqueous solution of magnesium sulphate containing a relatively small amount of novocaine.

---

1,563,088. GARMENT POCKET. FRANK IPPOLITI, Philadelphia, Pa. Filed Nov. 14, 1924. Serial No. 749,835. 2 Claims. (Cl. 2—247.)

2. In combination with a garment section, an outer pocket section stitched from its inner side a short distance from its raw edge to the garment section, thus forming an inwardly turned flap; and a lining provided with an outwardly turned flap stitched to the inner side of the inwardly turned flap on the pocket section.

1,563,089. SCALE BEARING. LOUIS JAENICHEN, Detroit, Mich., assignor to The Standard Computing Scale Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 15, 1923. Serial No. 657,481. 4 Claims. (Cl. 265—27.)

1. In a scale, a load receiver, legs extending downward therefrom and having notches in their lower ends, pins extending across said notches, clips pivotally mounted on said pins in the notches, and bearing blocks mounted in said clips, said legs being formed of two parts rotatable with respect to each other.

---

1,563,090. TOY MOTION-PICTURE DEVICE. LELAND A. KING, Chicago, Ill. Filed Aug. 4, 1924. Serial No. 729,934. 3 Claims. (Cl. 88—16.)

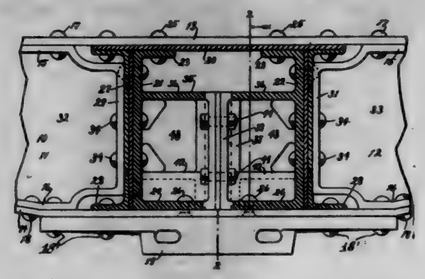
1. In a motion picture device of the character described, the combination of a flat disc-like member having circumferentially-spaced-apart sight openings and having pictures on both sides operatively positioned in relation to said sight openings for motion picture effects, a supporting member on which the disc-like member is rotatably mounted, the supporting member having a shield part face to face with the disc-like member, said shield part being of insufficient extent to cover the disc-like member whereby some picture matter on the disc-like member faced toward the supporting member is exposed to view while other of such matter is covered by the shield part, the shield part having a sight opening registering successively with the sight openings in the disc-like member when the latter is rotated, the arrangement being such that the operator may look in either direction through the registering sight openings toward a mirror and obtain motion picture effects by reflection of the pictures on the side of the disc-like member facing the mirror.

---

1,563,091. CAR UNDERFRAME. CHARLES C. KINSMAN, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Mar. 10, 1925. Serial No. 14,378. 9 Claims. (Cl. 105—228.)

2. In a car underframe construction, a bolster, a pair of draft arms secured to said bolster and extending

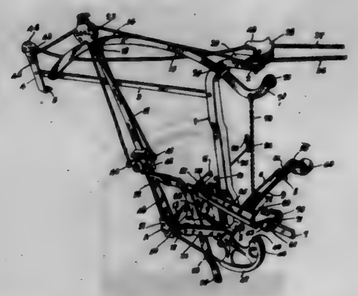
transversely thereof, and means including a channel member extending transversely to said arms and in the



plane of said bolster for spacing said arms apart, said means being provided with an aperture for receiving a coupling pin.

---

1,563,092. ATTACHMENT FOR MOTOR VEHICLES. ALFRED W. KNUTSON, Galesburg, Ill., assignor to Alvin V. Rowe, Galesburg, Ill. Filed June 4, 1920. Serial No. 386,586. 17 Claims. (Cl. 180—77.)

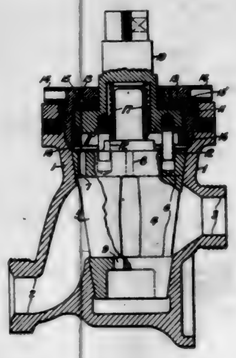


1. An attachment for motor vehicles to convert same to rein control, including means for connection with the steering appliances; means for connection with the fuel control means; means for shifting the control lever; means for actuating the clutch lever, and rein means operatively connected with said steering connecting means and with said fuel control and control lever connections and clutch lever actuating means, so as to allow of selective operation of the steering appliances independently of said other appliances, and to operate the fuel control means independent of said other appliances, and for operating said clutch lever, control lever and fuel supply means independent of said steering appliances.

---

1,563,093. SPIGOT COCK. JOSEPH LAWSON, Great St. Helens, London, England, assignor to The Asiatic Petroleum Company, Limited, Great St. Helens, London, England. Filed June 29, 1925. Serial No. 40,336. 5 Claims. (Cl. 251—98.)

1. In a spigot cock for controlling the flow of a fluid, the combination of a casing, an inlet to the casing and an outlet therefrom, a taper plug rotatably mounted therein, a spindle for actuating said plug, said spindle being separate from said plug, means for allowing slight relative movement between said plug and actuating spindle, a cap for retaining the actuating spindle in position, means for securing the cap to the casing, means for admitting the fluid to the wide end of the plug, a flange on said actuating spindle, a packing interposed between said flange and said cap and adapted to prevent leakage of the fluid past the actuating spindle, an adjustable ring on said cap adapted to move the flange on the actuating spindle towards said cap, whereby a certain degree of pressure is imparted to the packing, means for



admitting the fluid to said flange whereby the packing is compressed between said flange and cap, and a spring which holds the plug on to its seating, said spring being light but sufficiently strong to prevent the plug from leaving its seating.

---

1,563,094. VELOCIPEDE. RICHARD G. LEDIG, Philadelphia, assignor to A. Mecky Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1925. Serial No. 22,359. 7 Claims. (Cl. 208—93.)

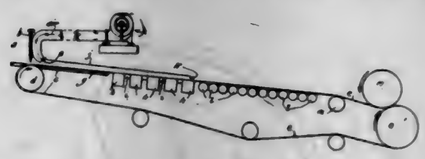
1. In a device of the character stated, a lower longitudinal frame member, a crank shaft hanger engaging the same and slidable thereon, a reinforcing sleeve interposed between said longitudinal frame member and said crank shaft hanger, a seat-frame member, and means common to said seat-frame member and said crank shaft hanger for fixing said crank shaft hanger upon said lower longitudinal frame member and for adjustably securing said frame member to said crank shaft hanger.

---

1,563,095. PAPER-MAKING MACHINE. ALEXANDER J. LEWTHWAITE, Portland, Oreg. Filed Mar. 7, 1922. Serial No. 541,689. 4 Claims. (Cl. 92—44.)

1. The herein described method of inducing quiescense in the sheet of stock as emitted by the slice in paper

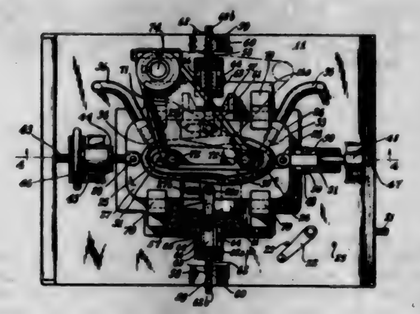
making, consisting in directing a confined stratum of air to overlie the sheet and travel therewith at substan-



tially the same rate of speed and in the same direction during the length of travel of such sheet necessary for the drainage of the major portion of the water therefrom.

---

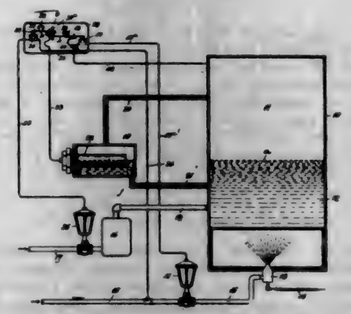
1,563,096. METHOD OF AND APPARATUS FOR PRESSING FOOTWEAR. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 19, 1924. Serial No. 714,288. 16 Claims. (Cl. 18—2.)



4. Apparatus for pressing footwear, said apparatus comprising a naturally U-shaped bag adapted to fit about the work adjacent the sole portion thereof, and backing means for closing the legs of the U-shaped bag toward each other.

---

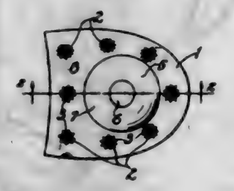
1,563,097. AUTOMATIC CONTROLLER FOR LIQUID LEVELS. HERBERT P. MILKES, Brooklyn, N. Y., assignor to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 1, 1921. Serial No. 448,818. 22 Claims. (Cl. 122—448.)



1. The combination of a container holding a gaseous fluid and a liquid, means for supplying said liquid to said container, thermo-sensitive means tending to automatically control said supplying means to maintain said liquid at a predetermined level in said container and means whereby the effects of physical changes in one or both of said fluids upon said thermo-sensitive means and tending to affect the operation thereof are neutralized.

---

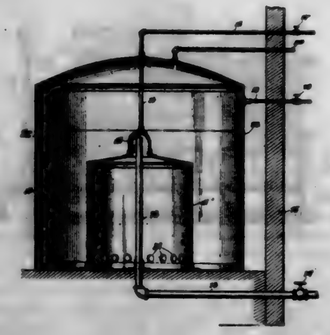
1,563,098. RUBBER HEEL. JOSEPH H. MILLER, St. Louis, Mo., assignor of one-half to Emil Schlamp, St. Louis, Mo. Filed Jan. 10, 1925. Serial No. 1,591. 7 Claims. (Cl. 36—35.)



1. A rubber heel having a portion of its body projecting from its tread surface to form a cushion united to the heel in the plane of said surface, and provided with a recess above the cushion complemental in shape thereto.

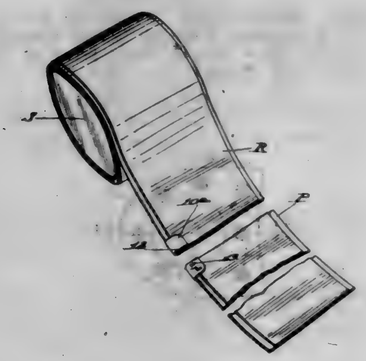
---

1,563,099. METHOD AND APPARATUS FOR STORING OIL. WILLIAM CULLEN MORRIS, Flushing, and GEORGE E. WOODS, Astoria, N. Y. Filed July 19, 1924. Serial No. 726,922. 2 Claims. (Cl. 220—13.)



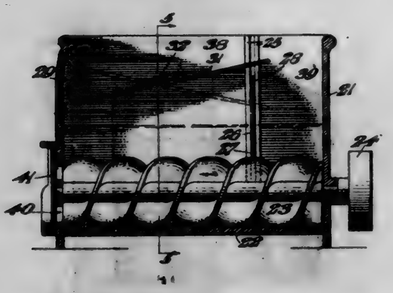
1. A storing and delivering apparatus for oil and the like, comprising an exterior tank closed at top, bottom and sides, a second tank secured on the bottom of the exterior tank and within the same, the top of the inner tank being closed and its sides perforated adjacent the bottom, the top of the inner tank having a small central dome, a vent pipe leading to the atmosphere from said dome and passing through the top of the exterior tank, a second vent pipe in the top of the exterior tank, means for admitting water to the outer tank, and a single oil conduit entering substantially at the center of the bottom, terminating in said dome and adapted to selectively fill or drain the inner tank.

1,563,100. RIBBON MEASURING AND RECORDING DEVICE. WILLIAM A. MYERS, Riverside, Calif., assignor of one-half to Walter E. Myers, Inglewood, Calif. Filed July 5, 1924. Serial No. 724,370. 4 Claims. (Cl. 33—128.)



1. In combination with a spool of ribbon or the like, paper disposed between the layers of said ribbon, tabs arranged along one lateral edge of said paper, and indicia on said tabs for indicating the amount of ribbon withdrawn from said spool.

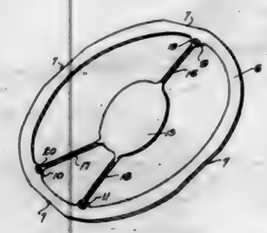
1,563,101. MIXING MACHINE. CHRISTOPHER OFFENHAUSER, Philadelphia, Pa. Filed July 7, 1922. Serial No. 573,283. 7 Claims. (Cl. 259—46.)



4. In a mixer, a casing, a feed conveyor in the bottom of said casing, said casing having a controllable discharge outlet, an adjustable partition dividing said casing into a discharge compartment and an inlet compartment and in free communication with said feed conveyor throughout the length of said compartment, a laterally extending baffle fulcrumed to lie within said discharge compartment and rotatably adjustable, and means to fix said laterally extending baffle in its adjusted position.

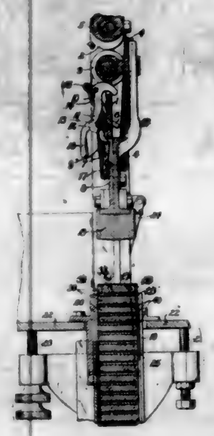
1,563,102. ANTIGLARE ATTACHMENT FOR HEADLIGHTS. ROBERT A. OSBURN, Birmingham, Ala. Filed Feb. 5, 1925. Serial No. 7,163. 9 Claims. (Cl. 240—48.4.)

1. An anti-glare attachment for headlights, comprising a bracket having a plurality of narrow radially disposed supporting legs, marginal means to mount the bracket in the lamp by means of said legs, and means to



mount a small mirror on the bracket with an upward inclination and in position to intercept the central zone of direct rays from the headlight.

1,563,103. MEANS FOR AND METHOD OF ASSEMBLING COMPOSITE HEEL BLANKS. DENNIS PARKS, St. Louis, Mo. Filed Jan. 31, 1924. Serial No. 689,790. 8 Claims. (Cl. 12—50.)

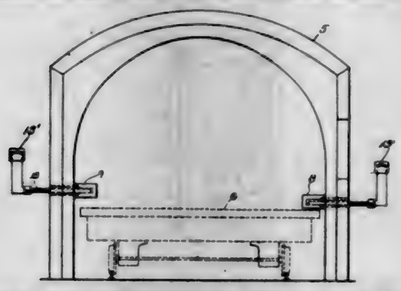


1. In a machine for use in assembling composite heel blanks of rubber and leather, in combination with a container for receiving and maintaining the heel blanks in column formation and a movable presser head for forcing the heel blanks downward in the container, a series of yielding guide members located at the top of the container and adapted when at rest to position the rubber heel inserted in the container and movable to permit the passage by them of a leather base applied to the rubber heel and larger than the same.

1,563,104. MEANS FOR MEASURING TEMPERATURES. OTTO PEDERSEN, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Jan. 3, 1921. Serial No. 434,580. 3 Claims. (Cl. 73—32.)

1. In combination, a furnace for enclosing articles to be heat treated, a plurality of test blocks closed at one end and being of a construction to simulate the heat

conveying features of articles to be heat treated in said furnace, said blocks being fixed to the inside wall of said furnace to expose same to the heat of said furnace, and

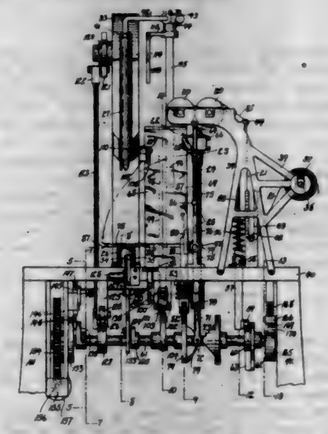


means communicating with the interior of said blocks and with the exterior of said furnace for measuring the temperature at the interior of said blocks.

1,563,105. ELECTRICAL ATTACHMENT PLUG. HARRY R. PENNINGTON, Chicago, Ill., assignor to John A. Amos, St. Louis, Mo. Filed Apr. 25, 1923. Serial No. 634,425. 3 Claims. (Cl. 200—115.5.)

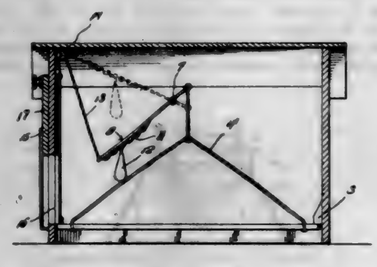
1. An electrical attachment plug comprising a two part casing, one of which is provided with fuse terminals, a fuse, and resilient clamping means carried by the other part of the plug to hold the fuse in engagement with the terminals when the plug parts are in assembled relation.

1,563,106. TEA-BALLING MACHINE. JOHN PIERCE, Southbury, Conn. Filed Aug. 7, 1924. Serial No. 730,764. 8 Claims. (Cl. 93—8.)



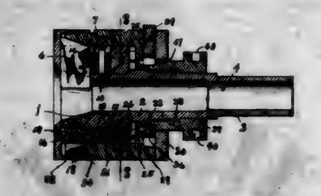
1. A tea-balling machine having a plunger and a die, means for supplying tea in predetermined amounts thereto, and means for automatically feeding bag-blanks at predetermined intervals horizontally between the said die and plunger prior to the descent of the plunger into the die, the said means including a fly constructed for the passage through it of the plunger.

1,563,107. CHICKEN COOP. CHARLES L. PLUNKETT, Monte Vista, Colo. Filed Mar. 17, 1925. Serial No. 16,163. 3 Claims. (Cl. 119—19.)



1. In a chicken coop, a housing provided with an entrance opening, a sliding gravity lowered door for said opening, a depressible floor, side suspension members connected with said floor, an arch pivotally connected with said suspension members, a shaft supported in said housing, a frame pivotally mounted upon said shaft and connected with said arch, means for adjustably mounting a weight upon said frame, a counterbalanced weight connected with said means, a flexible connection between said frame and door, and a pulley over which said means is passed.

1,563,108. THREAD-CUTTING DIE. ALBERT J. PRANCE, Detroit, Mich., assignor to Murchey Machine and Tool Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 12, 1923. Serial No. 612,226. 3 Claims. (Cl. 10—95.)

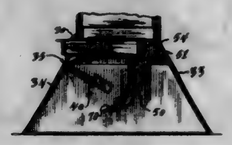


1. A die comprising a cylindrical body having radial grooves in its forward end, spring pressed chasers slidable in the grooves, a cap to keep the chasers in the grooves, a spring pressed sleeve slidable on the body and having a circumferential inclined surface engaging the chasers and adapted to move them inward when the sleeve is moved forward, a nut adjustably mounted on the body and having a shoulder to determine the operative position of the sleeve and of the chasers, a trip ring carried by the sleeve and adapted to lie in front of said shoulder to hold the sleeve forward, and a spring to hold the trip ring in front of said shoulder.

1,563,109. VENDING MACHINE. JOHN C. QUINTIN, Alhambra, Calif., assignor to Harry Woollen, Los Angeles, Calif. Filed Dec. 28, 1924. Serial No. 757,664. 2 Claims. (Cl. 194—85.)

1. In a vending machine for a coin of a given denominator, front and rear walls, end walls, a bottom wall and a top wall, all coacting to provide an enclosed coin receiving chamber; the top wall being adapted to

support a plurality of stacks of articles to be vended, a rock shaft extending transversely from one end of the wall to the other through said chamber, forked arms spaced along said shaft and loosely mounted thereon; the shaft extending transversely through a part of the forked portion of each arm; the closed end of each forked arm being disposed rearwardly of the shaft and terminating in an ejecting lug, a plurality of fixed arms carried by the shaft; one for each fork and being disposed within the forked part thereof; each fixed arm having a rearward extent arranged to abut the closed end of the forked arm adjacent the lug to hold the forked arm in normal position; each fixed arm having a forward extent adapted to move through the forked



end of the forked arm without moving same, a coin chute for each arm extending inwardly and downwardly from the front wall and arranged to discharge a coin flatwise on the forked end of the arm in such position as to be abutted by the fixed arm when the shaft is rocked forwardly; the forward extent of the fixed arm being spaced above the corresponding part of the forked arm when the rear extent is abutting the rear end of said forked arm, and a handle attached to the rock shaft externally of the chamber walls; the normal position of the parts being such that slight forward movement of the rock shaft will result in a coin resting on a forked end being so inclined as to slide off by gravity when free to do so.

---

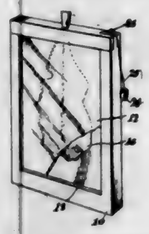
1,563,110. ROTOR FOR ELECTRICAL MACHINES. WILHELM REGELEIN and RICHARD SAMEITH, Mulheim-on-the-Ruhr, Germany, assignors to the Firm Thyssen & Co., Aktiengesellschaft, Mulheim-on-the-Ruhr, Germany. Filed Sept. 15, 1924. Serial No. 737,813. 2 Claims. (Cl. 171—206.)

1. In a rotor for electrical machines: the combination with a slotted core, coils on the periphery thereof, and coil holders inserted in said slots having heads at their outer ends, of means extending between the heads of adjacent coil holders comprising keys so shaped and arranged that together with the outer heads of the coil holders they tangentially tighten the rotor circumference and pull the coil holders in radially outward direction without increasing the pressure on the rotor coils, substantially as set forth.

---

1,563,111. TOY. ROY RIES, Hollywood, Calif. Filed Jan. 30, 1925. Serial No. 5,774. 3 Claims. (Cl. 46—37.)

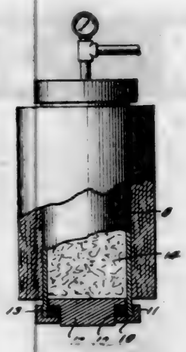
1. A toy comprising a frame, a transparent panel in said frame forming a front wall of a cavity therein, means for forming a back wall for said cavity, a member removably positioned between said front and back walls defining top, bottom and side walls for said cavity which outline a desired object, a passage communicating



with said cavity, and a closure for said passage, whereby a fluid material may be poured through said passage into said cavity and maintained therein.

---

1,563,112. QUICK-SEALING CLOSURE FOR REFRIGERATING DEVICES. THOMAS B. SLATE, New York, N. Y. Original application filed Jan. 10, 1924. Serial No. 685,482. Divided and this application filed Apr. 10, 1924. Serial No. 705,595. 2 Claims. (Cl. 220—3.)

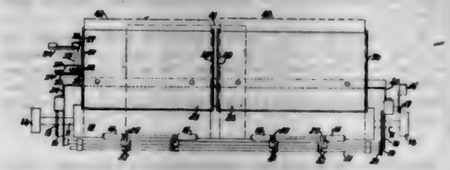


1. In apparatus of the class described, a container for cake material of uniform cross-section open at one end thereof, said container having its open end provided with spaced threaded portions, a flange ring having corresponding spaced threaded portions adapted for quick removal and replacement on the open end of the said container, a closure having an area substantially equal to the maximum cross-section of the container and slidably seated within the open end of said container, and an elastic ring interposed between the closure and the inturned flange of the flange collar to effect an air-tight joint when the pressure is exerted on the closure from within the container.

---

1,563,113. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 30, 1922. Serial No. 591,456. 8 Claims. (Cl. 197—127.)

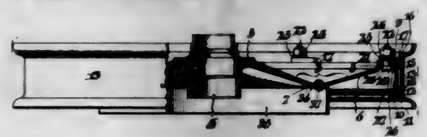
1. In a typewriting machine, a platen, means for positively positioning individually a pair of related worksheets side by side in non-overlapping relation, said means comprising collating tables arranged side by side and independent of each other and above the platen at the front thereof, the lateral edges of each table provided with edge gages, the structures of the respective adjacent edge gages being independent of each other, paper-feeding means to feed both work-sheets around the



platen in unison, and tally-strip feeding mechanism to feed a tally-strip around the platen independently thereof and in position to underlie the adjoining edges of both work-sheets.

---

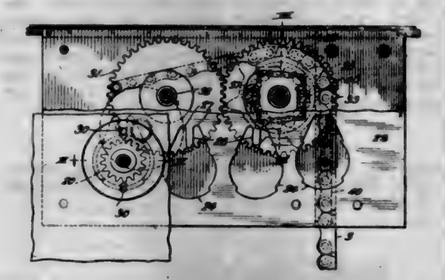
1,563,114. VEHICLE WHEEL. JOHN W. SMITH, Philadelphia, Pa. Filed Apr. 3, 1923. Serial No. 629,584. 6 Claims. (Cl. 301—63.)



5. A vehicle wheel comprising a one-piece wrought metal disk including an integral hub with a surrounding medially disposed web of conically dished and radially diminishing gage, said web having its peripheral portion flanged and flared to provide a rim locating seat, and means for seating a brake drum concentrically on the aforesaid disk.

---

1,563,115. WINDOW-CONTROLLING DEVICE. HARRY P. STEVENS, New York, N. Y. Filed May 20, 1924. Serial No. 714,624. 9 Claims. (Cl. 74—7.)



1. In a controlling mechanism for a window or the like, a suitable housing therefor comprising a cover plate on one side thereof, raising and lowering mechanism located within said housing, said cover plate having a plurality of openings, a bearing member adapted to be retained in any one of said openings, and an operating member which is adapted to be supported in said bearing member and engage said mechanism.

---

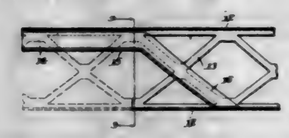
1,563,116. ADJUSTABLE SHELVING AND SERVICE DEVICE. JAMES D. TINSLEY, near Bakersfield, Calif. Filed Oct. 13, 1923. Serial No. 668,292. 5 Claims. (Cl. 211—27.)

1. An article supporting member for adjustable shelving, embodying an elongated base, vertical flanges along the parallel sides of the base, an upright substantially midway between and paralleling the flanges, and horizontal rollers rotatably supported by and extending between the upright and flanges, the rollers extending above the upper edges of the flanges, and the upright extending

vertically above the tops of the rollers to provide a positioning stop for articles supported on the rollers at each side thereof.

---

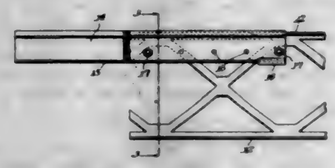
1,563,117. FABRICATED STRUCTURAL MEMBER. J. EDMUND TONNELIER and GEORGE C. FEUCHT, Pittsburgh, Pa., assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1924. Serial No. 703,644. 8 Claims. (Cl. 189—37.)



1. A rolled shape having a web comprising integral, diagonally disposed tie members, in combination with lengthwise extending braces secured to the shape adjacent to the upper end of outer tie members, said braces having inwardly and downwardly extending portions secured to the shape adjacent to the lower end of said tie members.

---

1,563,118. FABRICATED STRUCTURAL MEMBER. J. EDMUND TONNELIER, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1924. Serial No. 705,078. 10 Claims. (Cl. 189—37.)



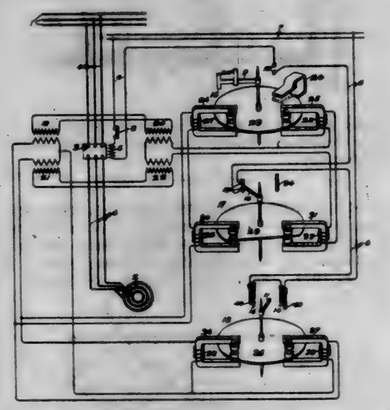
1. A rolled shape having an open work web connecting top and bottom flanges and strengthened by longitudinally extending formed plates embracing a flange and secured in place by means passing through the openings in the web.

---

1,563,119. FABRICATED STRUCTURAL MEMBER. J. EDMUND TONNELIER, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 17, 1924. Serial No. 707,192. 10 Claims. (Cl. 189—37.)

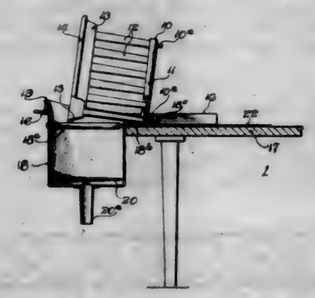
1. A rolled shape having an open work web strengthened by diagonally extending stiffening bars rigidly secured to the compression web members.

1,563,120. SYNCHRONIZING DEVICE. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 29, 1922. Serial No. 578,475. 8 Claims. (Cl. 171—118.)



2. In an alternating current electric system wherein two sources of alternating electromotive force are to be synchronized, means adapted to be operated to connect said sources, and means for effecting the operation of said connecting means when the electromotive forces of said sources are in synchronism, comprising a control circuit, a plurality of contacts arranged in series in said control circuit and a plurality of relays for controlling said contacts having energizing windings connected in circuit with said sources to render said relays responsive to the phase relation of said electromotive forces, one of said relays being operative in response to a predetermined phase difference between said electromotive forces to close the contacts controlled thereby and upon the occurrence of a smaller predetermined phase difference to open said contacts and another of said relays being operative in response to a predetermined phase difference between said electromotive forces with a time delay such that the contacts controlled thereby are moved to circuit closing position while said first contacts are in circuit closing position only when the difference between the frequencies of said electromotive forces is below a predetermined value.

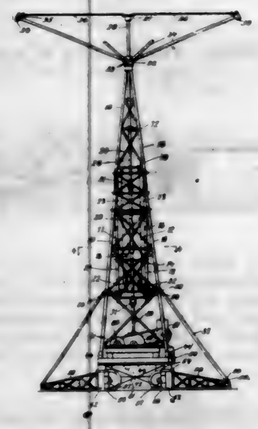
1,563,121. CONFECTION MOLD. JAMES S. VALENTINE, Chicago, Ill. Filed Apr. 13, 1925. Serial No. 22,604. 5 Claims. (Cl. 107—19.)



1. An article of manufacture suitable for containing liquid material adapted to be congealed by refrigeration comprising a plurality of cylinders closed at their lower ends and having their mouths secured to a common funnel, and said funnel having a bottom section opening into said cylinders and upstanding sides, one of said sides having a relatively greater angle with respect to said bottom to provide a discharge lip for said funnel.

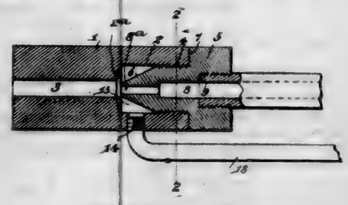
3. A frame adapted to be secured to a fixed object to provide a seat with end portions, and a spill drain adapted to be removably disposed in said seat and comprising a body, an outlet pipe, and cross members projecting therefrom to provide added supports for said drain.

1,563,122. PORTABLE AMUSEMENT RIDING DEVICE. FRANK L. UZZELL, Jamaica, N. Y. Filed Jan. 13, 1922. Serial No. 529,057. 8 Claims. (Cl. 272—41.)



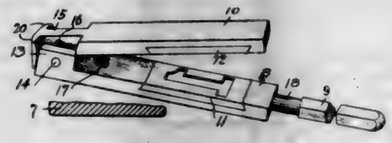
2. A portable riding device comprising a vertical shaft, car supporting means mounted thereon, a tower forming an upper bearing for said shaft, said tower comprising upper and lower sections, the upper section being telescopically mounted in a plurality of parallel guides carried by said lower section, said shaft comprising upper, lower and intermediate sections, the said intermediate section being removable to permit telescoping of the tower sections.

1,563,123. OIL BURNER. ROBERT C. WADE, Brownsville, Tex. Filed Mar. 28, 1923. Serial No. 628,283. 1 Claim. (Cl. 158—75.)



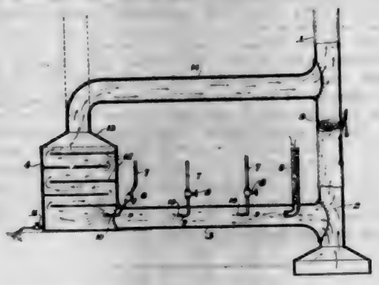
A burner of the character described, comprising a main body portion having a pair of aligned axial bores formed therethrough, one of greater diameter than the other, a tapered portion between the said bores, the bore of greatest diameter being interiorly threaded, a minor body portion comprising a body of a diameter equal to the diameter of said main portion and having a relatively large bore therethrough and further having a reduced extension constituting an inner nozzle and adapted to thread into said threaded bore, said inner nozzle terminating at the end of the enlarged bore, said bore in said minor portion extending into said nozzle and said nozzle having an axial bore therethrough of materially less diameter than that bore in the minor portion, an air inlet nipple threaded at one end into the bore of the minor portion, an air pipe connected thereto, and a fuel inlet tube opening into the bore of greater diameter in the main body portion at a point slightly in the rear of the outlet of said nozzle and directed at an inclination toward the discharge end of the burner.

1,563,124. DIES. JOHN R. WALD, Anamosa, Iowa. Filed July 10, 1925. Serial No. 42,704. 5 Claims. (Cl. 101—28.)



1. Die structure comprising a bottom holder and a top holder normally held in expanded position and having a pin-and-slot connection therebetween.

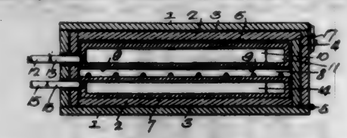
1,563,125. SMOKE CONDENSER. ANDREW W. WARD, Charleston, W. Va., assignor of one-fourth to Latelle M. La Follette, one-fourth to John M. Javins, and one-fourth to Clark M. McVay, all of Charleston, W. Va. Filed Oct. 6, 1924. Serial No. 742,035. 2 Claims. (Cl. 183—22.)



1. In combination with a stack, a substantially horizontal elongated tube having one end secured to and communicating with the stack to receive therefrom the products of combustion, a damper provided in the stack above the connection of the tube thereto to direct the said products into the tube, a pipe for supplying exhaust steam communicating with the tube at a point adjacent the connection of the tube to the stack and having its inner end turned in a direction away from the stack, and a series of smaller pipes entering the tube at points spaced from the exhaust steam pipe, said smaller pipes being supplied with water and having nozzles at their ends within the tube to discharge water in the form of spray to condense the steam, said smaller pipes being spaced from each other, and a tank into which the outer end of the tube discharges.

1,563,126. CASE HEATER. WILLIAM H. WELSH, Philadelphia, Pa., assignor of one-half to William Jennens, Philadelphia, Pa. Filed Nov. 22, 1922. Serial No. 602,590. 2 Claims. (Cl. 41—25.)

1. The herein described method of making electrotype plates, which comprises the covering of a metallic plate with molding material to form a case, softening the outer surface of the molding material by heating, maintaining the deeper portions of said molding material in a relatively harder condition by keeping the same cool,

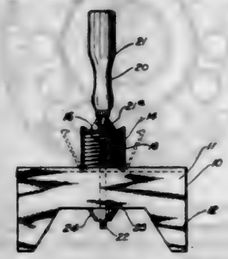


and subsequently placing the softened molding material in contact with the engraving or type from which the impression is to be made.

1,563,127. SEPARABLE CUFF BUTTON. EBEN F. WILDE, Attleboro, Mass., assignor to The Baer & Wilde Company, Attleboro, Mass. Filed June 10, 1925. Serial No. 36,159. 8 Claims. (Cl. 24—104.)

1. In a button, a cupped base, a ring on the base having a substantially right angular flange, the rim of the base being spun over the ring, and a shank having a flanged end, which extends outwardly from the shank and the periphery of which abuts the flange of the ring, the free edge of the flange of the ring being spun inwardly onto the flange of the shank.

1,563,128. VALVE-SPRING-COMPRESSING DEVICE. FRANK L. WITHAM, Petaluma, Calif. Filed Jan. 9, 1924. Serial No. 685,196. 4 Claims. (Cl. 29—86.)

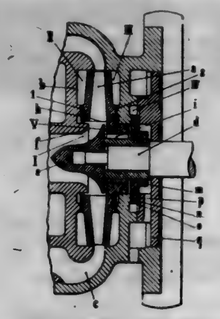


1. A device of the character described comprising a base member, a plurality of dog members adapted to be positioned by the base member, and compression means whereby a helical spring may be forced down upon the base member to permit the dogs to embrace the spring longitudinally and hold it in its compressed condition, said base and dogs cooperating to insure that the spring when compressed will be automatically engaged by the dogs.

1,563,129. CENTRIFUGAL PUMP OR BLOWER AND SIMILAR MACHINE. LUDWIG WEIL, Biebrich, Germany. Filed Nov. 30, 1921. Serial No. 518,938. 20 Claims. (Cl. 103—112.)

1. A machine of the class described, comprising a casing having an inlet passage and a discharge passage, a rotary member formed with passages intermediate the

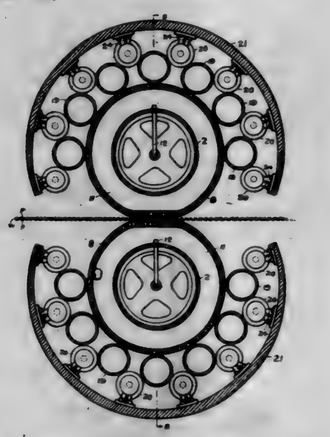
inlet and discharge passages and adapted when rotated to force a fluid medium from the inlet passage to the discharge passage, a fluid chamber, a passage through which the fluid medium entering the rotary member acts



on the fluid confined within said chamber for varying the pressure thereof, and means controlled by the pressure of the fluid within the chamber for varying the flow of the fluid medium through said passages.

---

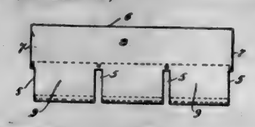
1,563,130. PNEUMATIC PRESS ROLL FOR PAPER MACHINES. MILTON T. WESTON, New York, N. Y. Filed Aug. 22, 1924. Serial No. 733,579. 10 Claims. (Cl. 92—49.)



1. In a pneumatic press roll for paper machines and the like, a pneumatic tubular roll, a shaft concentric therewith and means for keeping said pneumatic tubular roll in axial alignment.

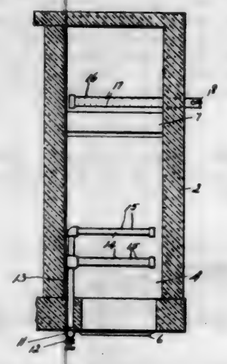
---

1,563,131. SLAB SHINGLE. JOHN C. WHITMORE, Petersburg, Va. Filed Feb. 16, 1923. Serial No. 619,382. 2 Claims. (Cl. 108—8.)



2. A strip shingle formed with a continuous body portion and a series of interspaced tabs along one side thereof, with the material of the shingle folded under at the tab portions thereof to form a double thickness tab through the length of the tab, and a metal piece inserted across the line of fold at the end of the tab.

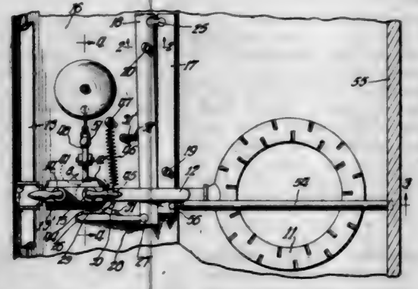
1,563,132. COMBUSTION ACCELERATOR AND SMOKE CONSUMER. CHARLES WRIGLEY, Philadelphia, Pa. Filed July 2, 1924. Serial No. 723,738. 1 Claim. (Cl. 110—53.)



The combination with a furnace including a grate so as to provide an ash pit and a combustion chamber, and a bridge wall at the rear of said grate, of a steam supply pipe leading from a source of steam supply to a point below the grate, a valve connected with said supply pipe to a point below the grate, a feed pipe connected with said valve and underlying the grate, a plurality of distributing pipes connected with the feed pipe and lying crosswise of the furnace within the ash pit below the forward end of the grate, said distributing pipes having perforations therein to one side of the vertical centers above the horizontal centers whereby jets of live steam will be projected in the same general direction as the furnace draught through the grate, in combination with an air distributing pipe entering the furnace from the outside and located on the bridge wall crosswise of the furnace, said air distributing pipe having perforations therein off the vertical center and above the horizontal center of said pipe for projecting jets of air into the space above the bridge wall where said air will be mixed with the products of combustion thrown off from a fire in the combustion chamber, which products of combustion have been previously mixed with the steam, and a valve to control the passage of air through the air distributing pipe.

---

1,563,133. AUTOMATIC VALVE-CLOSING DEVICE FOR GAS PIPES. TEOFIL ZLYDASZYK, Chicago, Ill. Filed Dec. 3, 1924. Serial No. 753,654. 6 Claims. (Cl. 67—117.)



1. In combination with a burner and a valve cooperating therewith, a thermostat associated with said burner, means for temporarily holding said valve open, means actuated by said thermostat for releasing the hold of said first mentioned means upon said valve, and a signalling mechanism cooperating with said first mentioned means and operating instantly upon operation of said second mentioned means.

---

1,563,134. MEANS FOR DETERMINING THE PHYSIOLOGICAL VALUE OF REMEDIAL AND MEDICAL SUBSTANCES. THEODORE F. ZUCKER, New York, N. Y., assignor, by mesne assignments, to University Patents, Inc., of New York, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 677,183. 6 Claims. (Cl. 167—7.)

1. The process of determining the comparative acid secretion excitant strength of a substance which comprises determining the pH value of the feces of an animal, feeding a known quantity of said substance to the animal and determining the pH value of the feces after such feeding.

4. The process of determining the acid secretion excitant strength of cod-liver oil which comprises internally administering an alkaline substance into an animal, determining the pH value of the feces, internally administering a known quantity of cod-liver oil and determining the pH value of the feces.

6. The process of determining the antirachitic strength of a substance which comprises internally administering an alkaline rachitic producing substance into an animal, determining the pH value of the feces, internally administering a known quantity of antirachitic substance and determining the pH value of the feces.

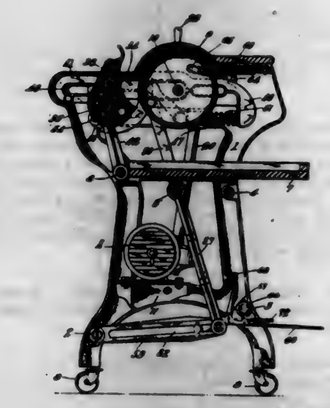
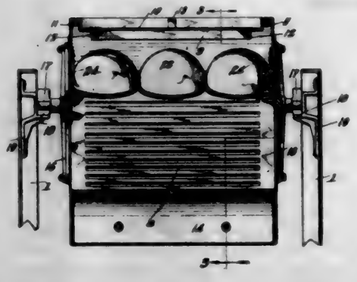
1,563,135. IRONING MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Feb. 25, 1921. Serial No. 447,832. 12 Claims. (Cl. 68—9.)



1. In an ironing machine, a frame, a cylinder thereon, a pair of members, means for connecting the members to the frame for slidable movement relative thereto, a shoe, means for mounting the shoe on said members to cause same to partake of the sliding movement of the members and to enable the shoe to have pivotal movement independent of the sliding movements of the members, means connected to the members to slide same, and independent means connected to the frame and pivotally connected to the shoe for effecting pivotal movement of the shoe at a predetermined point in the sliding movements of the members.

1,563,136. WASHING MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Oct. 12, 1922. Serial No. 594,019. 5 Claims. (Cl. 68—21.)



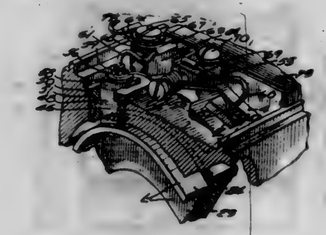
1. In a washing machine, a clothes container provided with recessed side walls, and vacuum cups having ribs fitting within said recesses.

---

1,563,137. CLOTHES DRIER. GUS AMSLER, Philadelphia, Pa. Filed Apr. 30, 1924. Serial No. 710,025. 1 Claim. (Cl. 68—34.)

In a clothes drier, a standard, a horizontal plate having an upturned head carried by the upper end of said standard, said head comprising a flanged member having notches in the upper edge of the flange and a smaller inverted flanged member positioned within and above the first-mentioned flanged member, the flange of said second-mentioned flanged member having notches in alinement with the notches of the flange of the first-mentioned flanged member, arms each having a portion adapted to be extended within a notch of the flange of the first-mentioned flanged member and having a reduced portion providing shoulders, the reduced portion being received within a notch of the flange of the second-mentioned flanged member with the shoulders engaging the same to prevent longitudinal movement of the arm, and pivoted locking members carried by the first-mentioned flanged member and adapted to move into engagement with the arms respectively to secure the same against displacement when the arms are positioned in the notches of the first-mentioned flanged member.

**1,563,138. IGNITION MAGNETO.** FREDERICK W. ANDREW, Glen Head, N. Y., assignor to Eisemann Magneto Corporation, Brooklyn, N. Y., a Corporation of New York. Original application filed Oct. 3, 1921, Serial No. 504,934. Divided and this application filed Apr. 10, 1924. Serial No. 705,461. 7 Claims. (Cl. 171—209.)



3. In an ignition magneto, a non-magnetic frame having a pair of openings in the top thereof, an insulated brush in one opening, a grounded brush in the other opening, said brushes projecting through the top of the frame, a single spring mounted on top of the frame and having oppositely extended ends which engage the projecting ends of said brushes to press the brushes inwardly, and means for insulating said spring from said insulated brush.

---

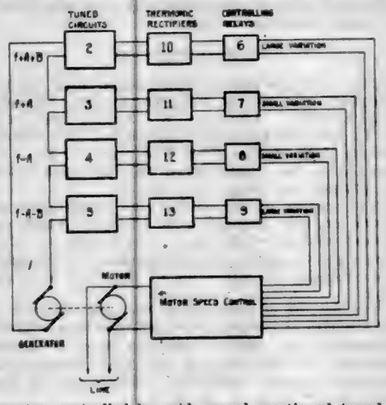
**1,563,139. HOLDER FOR AUTOMOBILE REGISTRATION CARDS.** CLARENCE S. APPLAS, Sacramento, Calif. Filed May 9, 1925. Serial No. 29,133. 2 Claims. (Cl. 40—10.)

1. A holder for automobile registration cards comprising a rectangular body member formed of flexible protective material, said body member having its marginal portions turned over on the front, a flexible transparent sheet stitched around its margins within said overturned portions to form a pocket, said body member having a slit adjacent to one end to form an entrance opening to said pocket for the introduction of a registration or other card, and spaced hooks secured to the front face of the overturned ends of the body and adapted to receive a lacing to support the holder around an automobile steering post in a manner to display the said card.

---

**1,563,140. ARRANGEMENT FOR CONTROLLING THE DRIVING MOTORS IN HIGH-FREQUENCY MACHINES.** GRAF GEORG VON ARCO, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation. Filed Aug. 3, 1922. Serial No. 579,502. 5 Claims. (Cl. 171—119.)

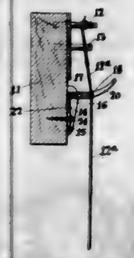
1. An arrangement for controlling the driving motor of a high frequency machine comprising independent tuned circuits coupled to the output circuit of the high frequency machine, one tuned circuit being tuned to a frequency differing from the normal frequency by a relatively small amount, another tuned circuit being tuned to a frequency differing from the normal frequency by a relatively large amount, apparatus controlled by said first mentioned tuned circuit for changing the motor speed by a relatively small amount towards normal and



apparatus controlled by said second mentioned tuned circuit for changing the motor speed by a larger amount towards normal.

---

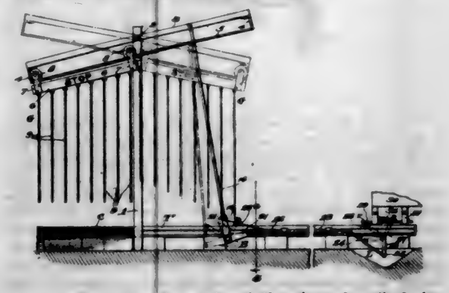
**1,563,141. HARP FORK.** MICHAEL ASLANIAN, Los Angeles, Calif. Filed July 25, 1924. Serial No. 728,110. 6 Claims. (Cl. 84—264.)



5. A harp fork for shortening a string and adapted to be thrown into or out of position by hand, said fork adapted to be adjustable longitudinally of a string of the harp, and comprising a back plate having a slot longitudinally thereof and having outwardly extending side flanges and a lever mounted in and between said flanges, said lever having a groove to engage a string of a harp, and provided with a handle.

---

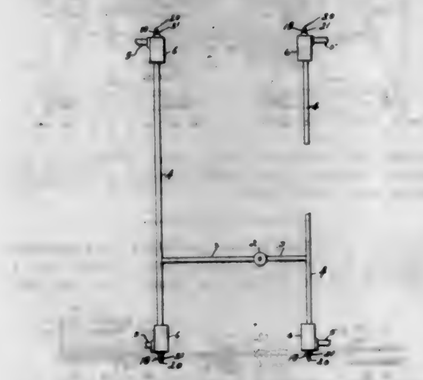
**1,563,142. RAILWAY-CROSSING GATE.** ROBERT C. BAIER, Nisbet, Pa. Filed May 5, 1924. Serial No. 711,274. 4 Claims. (Cl. 246—293.)



1. A railway crossing gate of the class described, including a support arranged at one side of the crossing, a tiltable gate carrier pivotally mounted at its medial portion on the post and a shiftable sliding gate carried thereby, carrier actuating means in the track-way adjacent the crossing, a member connecting said actuating means with the carrier, and train operated means remote from the crossing for controlling said carrier actuating means.

---

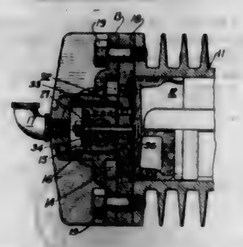
**1,563,143. VALVE FOR AUTOMOBILE HYDRAULIC BRAKES.** SAMUEL BAILIE, Camden, N. J. Filed Apr. 9, 1925. Serial No. 21,807. 11 Claims. (Cl. 303—84.)



1. The combination with a hydraulic brake including conduits and flexible connecting hose, of valves between the conduits and hose, said valves being maintained in an open position due to unbalanced pressure at opposite ends and automatically closing when the pressure is suddenly reduced at the outer end.

---

**1,563,144. AIR COMPRESSOR AND VALVE.** DEXTER C. BAKER, Oakland, Calif., assignor to Baker-Hansen Manufacturing Co., Alameda, Calif., a Corporation of California. Filed May 8, 1923. Serial No. 637,437. 10 Claims. (Cl. 230—34.)

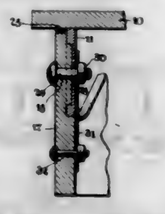


1. In a fluid compressor, a cylinder, a piston reciprocating within the cylinder, a discharge valve structure, and an intake valve structure, comprising a member at the cylinder end and having discharge apertures, a closure within the cylinder for all of the apertures, a flat spring having a cupped edge engaging the closure, and means for fastening the spring near its center, whereby its edge may be free to urge the closure to close the aperture.

---

**1,563,145. SEAT.** WILLIAM J. BARGEN and WILLIAM R. BRENNAN, Missoula, Mont. Original application filed Feb. 14, 1924, Serial No. 746,066. Divided and this application filed Sept. 9, 1924. Serial No. 736,735. 2 Claims. (Cl. 155—87.)

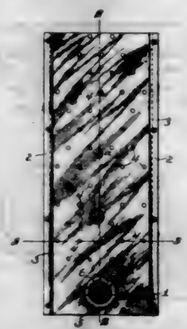
1. In a seat a horizontally disposed yoke-shaped supporting bracket provided at each end with a vertically disposed arm having one face formed with a circular enlargement and a pair of oppositely extending stop shoulders below the enlargement, a pair of seat member supports each having one face at its rear formed with a circular socket extending around an enlargement, said enlargements in connection with the side walls of said



sockets providing pivots for said supports, and means for connecting the rear end of said supports to the upper end of said arms, each pair of shoulders extending transversely of an arm and inclining downwardly towards the vertical center of the arm.

---

**1,563,146. CHUTE CONSTRUCTION FOR COIN-CONTROLLED MACHINES.** ARTHUR W. BARNARD, Newton Center, Mass. Filed May 17, 1922. Serial No. 561,758. 2 Claims. (Cl. 194—1.)



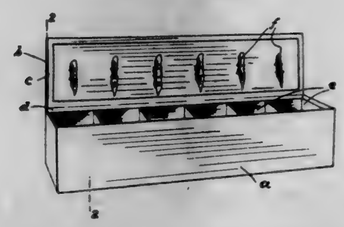
1. A coin chute for coin-controlled machines having a transparent front extending to the lower terminal of the chute, and a tubular coin return member inserted through the transparent front above the lower end thereof whereby an obstruction in said coin return member will be visible at the front.

---

**1,563,147. LABEL-APPLYING MACHINE.** GEORGE H. BARTLETT, San Francisco, Calif. Filed Mar. 28, 1925. Serial No. 18,991. 12 Claims. (Cl. 216—58.)

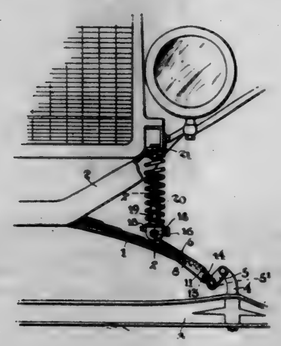
1. In a machine for applying labels to packages, means for receiving and holding a label, means for applying paste to the under side of said label, a travelling member, means for inverting said label and depositing it upon said travelling member with its pasted side uppermost, and means for operating said travelling member to cause the label to be applied to a positioned package.

1,563,148. SHIPPING AND DISPLAY CARTON. GEORGE E. BARTOL, Jr., Philadelphia, Pa., and LEWIS A. HAWKES, Merchantville, N. J., assignors to C. Howard Hunt Pen Company, Camden, N. J., a Corporation of New Jersey. Filed Mar. 13, 1924. Serial No. 698,840. 2 Claims. (Cl. 206—44.)



1. A shipping and display carton having a bottom, side and end walls, a cover hinged to one of said walls, a flap formed by an extension of the cover, a specimen of the articles to be contained in said carton supported by said flap, and a second flap connected to the first flap, arranged to be positioned to hold the first flap in display position or to be folded over the end of the article to protect it when the flaps are being inserted within the box.

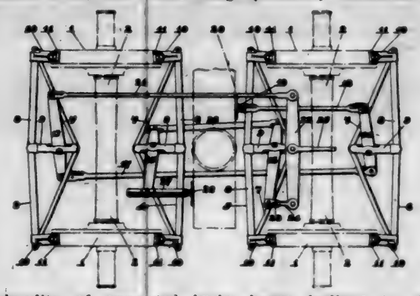
1,563,149. AUXILIARY SPRING DEVICE. HARVEY F. BENNER, Toledo, Ohio, assignor to The Buckeye Auxiliary Spring Company, Toledo, Ohio. Filed Aug. 5, 1924. Serial No. 730,220. 6 Claims. (Cl. 267—28.)



1. In combination with a vehicle spring, a saddle adapted to rest upon and engage over said spring, an anti-friction device carried by said saddle to play upon the under surface of said spring on activity of the latter, a resilient element, and a shiftable supporting means connected with said saddle for supporting said resilient element beneath and in contact with the under surface of a vehicle body.

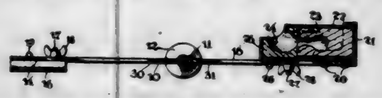
1,563,150. CLASP BRAKE. MINOT C. BLEST, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Jan. 2, 1923. Serial No. 610,108. 11 Claims. (Cl. 188—56.)

1. In a clasp brake mechanism, the combination with a car truck, of a brake lever located adjacent one end of said truck and inclined in one direction, a brake lever located adjacent the opposite end of said truck and inclined in the same direction as the first mentioned lever, said levers being operatively connected, a



plurality of connected brake levers inclined in the opposite direction, and means operatively connecting both of said sets of levers.

1,563,151. CENTRIFUGAL CASTING APPARATUS. BERNARD L. BOOTH, Lewiston, Mont. Filed June 4, 1924. Serial No. 717,803. 2 Claims. (Cl. 226—65.)



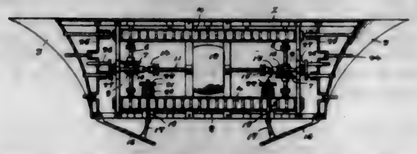
1. A device of the class described comprising a supporting bar mounted for rotation intermediate the ends and having longitudinally directed guide slots, a socket member attached to the bar at one end, a counter weight having a threaded pin extending through one of said slots, a clamp nut engaging said pin and operative to adjustably couple the counter weight to the bar, a flask device engageable in said socket member, and a crucible device having a threaded pin extending through the other slot and provided with a clamp nut to adjustably couple said crucible device.

1,563,152. TREAD GUARD FOR CASTERS. JAMES BOWEN, Manheim, Pa., assignor to Bond Foundry and Machine Company, Manheim, Pa., a Corporation of Pennsylvania. Filed Mar. 28, 1922. Serial No. 547,490. 2 Claims. (Cl. 16—41.)

1. The combination in a caster, of a plate having spaced arms; a spindle; a wheel mounted on the spindle; a pin extending from one arm to the other arm above the wheel; a curved sheet metal scraper pivotally mounted on the pin and having its free end bearing against the periphery of the wheel; and a spring yieldingly holding the scraper in contact with the wheel.

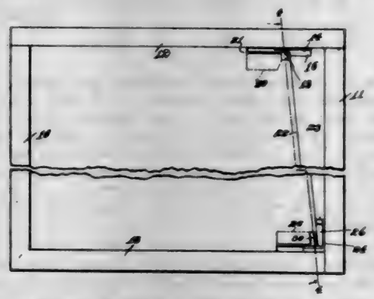
1,563,153. COAL PLOW. DANIEL B. BRACKETT and CLARENCE F. BLOCH, Whipple, W. Va. Filed Mar. 18, 1925. Serial No. 16,517. 1 Claim. (Cl. 262—12.)

In a device for the purpose set forth, a substantially rectangular hollow body having an open side and having plow shares on the ends thereof, chain traction devices for the body, motor operated means for imparting motion to the chain tractors, means controlling said motion imparting means and also for causing the body to be propelled in either of two directions, plow shares on the ends of the body, plates pivoted at the ends of the open side of the body and disposed opposite the inner concaved faces of the plow shares, means connected to the



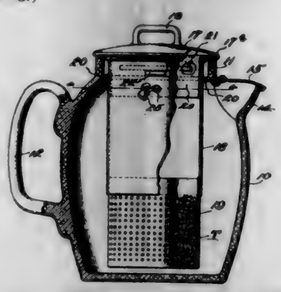
plates and operated from the interior of the body for swinging and sustaining the plates angularly on the body, punches movable through the concaved faces of the plow shares, means operated by the propelling means for imparting a reciprocatory motion to the punches and means rendering said punch operating means inactive.

1,563,154. GRAVITY DOOR HINGE. OLIVER BRAGER and CARL S. BRAGER, Clear Lake, and THOMAS O. THOVSON and ELMER BRAY, Hanlontown, Iowa. Filed Jan. 11, 1924. Serial No. 685,626. 3 Claims. (Cl. 20—16.)



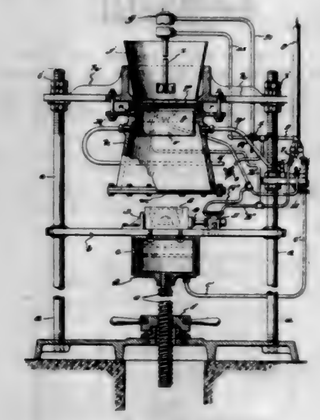
1. The combination with a door frame and a door, of a hanger for the door comprising a pair of hinges, each of which is provided with a stationary member and a movable member, a filler board, and means carried by each of the stationary members for supporting said filler board in position.

1,563,155. TEAPOT. MARIA L. BUCKINGHAM, Decatur, Ill. Filed Feb. 27, 1925. Serial No. 12,005. 6 Claims. (Cl. 53—3.)



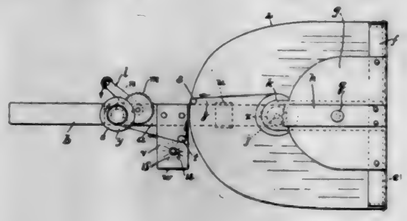
1. In a tea pot, in combination, an open top vessel, a tea leaf container detachably mounted and locked in and suspended from the open top of said vessel, and a cover for said container and vessel detachably mounted on and connected with the container, said container and cover removable from and replaceable in said vessel as a unit.

1,563,156. CORE-MAKING MACHINE. GEORGE A. BUNMAN, Detroit, Mich., assignor to E. J. Woodison Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 28, 1923. Serial No. 665,335. 12 Claims. (Cl. 22—36.)



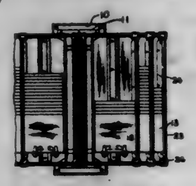
1. In apparatus for the purpose described, the combination of an air and sand reservoir, provided with a discharge orifice, means for conducting air under pressure thereto, a hopper for charging said reservoir with sand through a passage provided with a valve to guard said passageway, and means for ramming down the sand when it sticks in such passage way.

1,563,157. MACHINE FOR UNREELING AND SPOOLING TYPEWRITER RIBBONS. EBER BURROUGH, Camden, N. J. Filed May 1, 1925. Serial No. 27,135. 7 Claims. (Cl. 242—55.)



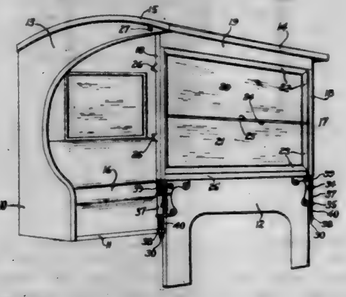
1. A ribbon unreeling and spool-winding machine comprising two frames, means carried by the two frames to revolubly hold between them a reel of ribbon and a spool to be wound, and mechanism to revolve the spool to be wound, one of said frames being hinged on, and adapted to be swung toward, the other frame to bring them into relation to so hold said reel and spool.

1,563,158. INDEX OR FILE. CHARLES S. CAMPBELL, New Haven, and WILLIAM H. DAY, East Haven, Conn., assignors to Index Visible, Inc., New Haven, Conn. Filed July 7, 1921. Serial No. 483,004. 21 Claims. (Cl. 129—16.)



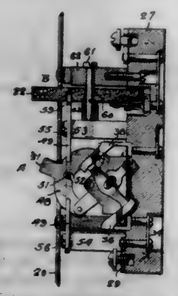
1. In an index or file, a support for cards or the like, guard flanges upon one edge of the support to protect the edges of the cards, and spacing members secured on the support in alignment with the flanges.

1,563,159. WINDSHIELD. PHILIP CARLSON, Bridgeport, Conn., assignor to Metropolitan Body Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 9, 1923. Serial No. 673,689. 6 Claims. (Cl. 296—84.)



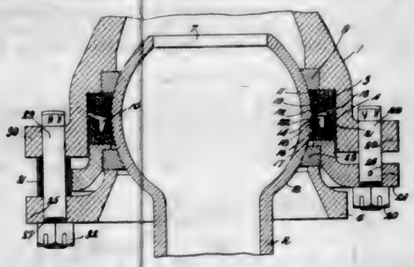
1. In a vehicle, an upper member, a lower member, there being a vision space between the members, and a wind shield in said vision space and extending between said members, the wind shield being pivotally connected to one of said members and resiliently connected to the other member, said resilient connection including means for absorbing shocks tending to move said members toward and away from each other.

1,563,160. ELECTRIC SWITCH. HOYT CATLIN, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 14, 1921. Serial No. 484,739. 3 Claims. (Cl. 200—50.)



1. A switch device comprising a pair of wire terminals for connection to the mains, a group of wire terminals for connection to distributing lines, switch contacts permanently connected to the main terminals, cooperating switch contacts spaced therefrom, switch bars affording a double make and break connection between said switch contacts, a master snap switch mechanism for operating said bars, together with switch contacts permanently associated with the distributing terminals, a multi-position selector switch for establishing connection between certain of said contacts, permanent connection between certain of said contacts and the distributing contacts of the master switch, together with means operated by mechanism of the master switch for locking the selector switch against movement when the master switch is in circuit-closing position.

1,563,161. PRESSURE PACKING. GEORGE CHRISTENSON, North Plainfield, N. J., assignor to Johns-Manville, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 26, 1924. Serial No. 709,262. 4 Claims. (Cl. 288—1.)

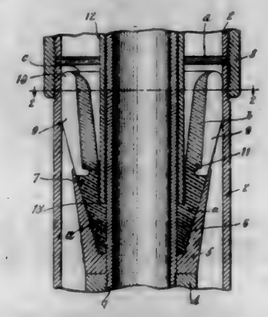


4. In combination, in a universal joint pipe-coupling, having ball and socket members, a pair of spaced bearing rings having their inner surfaces shaped to the spherical contour of said ball member, a pair of opposed packing rings intermediate said bearing rings and fitting loosely together, and a resilient lip projecting from one of said packing rings toward the opposed face of the other packing ring, said lip being engageable with the surface of the ball member.

1,563,162. SWAB AND PACKING FOR DEEP WELLS. GEORGE CHRISTENSON, North Plainfield, N. J., assignor to Johns-Manville, Incorporated, New York, N. Y., a Corporation of New York. Filed May 22, 1924. Serial No. 715,159. 1 Claim. (Cl. 74—109.)

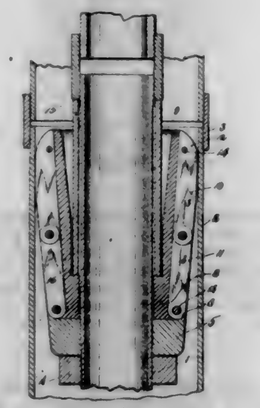
In a plunger for deep well pumps, the combination with a tubular stem of an expansible packing member having an exteriorly downwardly tapered heel portion secured to said stem, a median bearing portion, a free end upwardly tapered exteriorly and downwardly tapered interiorly, and means secured to said stem and adapted to restrain movement of the free end of the packing member when the latter is subjected to forces tending to expand it.

1,563,163. SWAB PACKING FOR DEEP WELLS. GEORGE CHRISTENSON, North Plainfield, N. J., assignor to Johns-Manville, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1925. Serial No. 4,628. 7 Claims. (Cl. 74—109.)



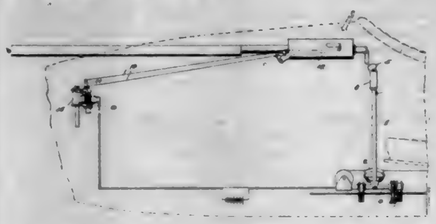
1. Packing comprising an expansible solid of revolution and longitudinally extending radially placed flat metal reinforcements having one end secured to the solid medially thereof and an edge coincident with a corresponding surface of the solid.

1,563,164. REENFORCED SWAB CUP. GEORGE CHRISTENSON, North Plainfield, N. J., assignor to Johns-Manville, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1925. Serial No. 4,630. 9 Claims. (Cl. 74—109.)



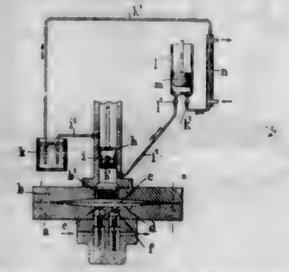
1. Packing comprising an expansible solid of revolution having therein radially placed and longitudinally extending flat articulate metallic reenforcements.

1,563,165. FIRE-CONTROL MECHANISM FOR AIRPLANE GUNS. WILLIAM DOUGLAS CLARK, Washington, D. C. Filed Mar. 18, 1925. Serial No. 16,515. 6 Claims. (Cl. 89—27.)



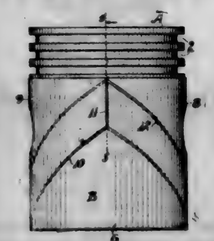
5. In an airplane provided with electrical releasing gear, a control stick, a plurality of finger actuated switches mounted on said control stick, suitable guards for said switches and means whereby said switches may be actuated separately or simultaneously as desired.

1,563,166. DIAPHRAGM COMPRESSOR. HENRI CORBLIN, Paris, France. Filed Sept. 20, 1923. Serial No. 663,821. 2 Claims. (Cl. 250—5.)



1. In a diaphragm compressor, of the type in which a pump piston produces, by means of a body of liquid, oscillations of a diaphragm in a chamber of general biconical shape, formed between two discs between which the diaphragm is secured, one of said discs carrying the suction and delivery valves,—the provision of a main pump piston, adapted to generate a volume less than that of the compression chamber, and of a small auxiliary pump, adapted to inject into the main pump barrel, at every stroke of the piston, a small quantity of liquid necessary to complete the volume of the compression chamber and to press the diaphragm against the disc, carrying the valves.

1,563,167. CONSTANT CLEARANCE PISTON. CLEVELAND S. CUMMINGS, San Francisco, Calif. Filed Nov. 27, 1922. Serial No. 603,421. 3 Claims. (Cl. 74—108.)

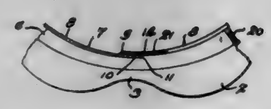


1. In a piston of the character described a head, a ring portion and a skirt portion, a substantially V-shaped

segment forming a part of the skirt, and a plurality of arch shaped lugs connecting the V-shaped segment to the skirt.

---

1,563,168. COLLAR BRACE. SAMUEL N. CUTLIP, Walla Walla, Wash. Filed Aug. 12, 1924. Serial No. 731,542. 2 Claims. (Cl. 54—19.)



1. In a collar brace, a pair of yielding strips having their ends overlapped and joined to form a sliding joint, and having a part adapted to conform to the inside of a collar, means to limit the movement of said joint and means including said last mentioned means to attach said brace to a collar.

---

1,563,169. SHOCK ABSORBER. WILLIAM G. DANIEL and NATHANIEL ROGERS, Sunburst, N. C. Filed May 11, 1925. Serial No. 29,490. 4 Claims. (Cl. 188—88.)

1. A shock absorber comprising a pair of toggle lever arms pivotally connected together and movable towards and away from each other respectively on the compression and rebound of the vehicle spring and further adapted to be pivotally connected with the vehicle body and spring, a cushioning mechanism connected with said arms and operated thereby on the compression and rebound of the vehicle spring, said cushioning mechanism including means for effecting a greater cushioning action on the rebound than on the compression of the vehicle spring, and means connected to said mechanism and projecting forwardly thereof to provide a guide for the pivot between said arms.

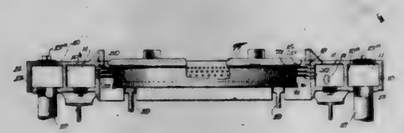
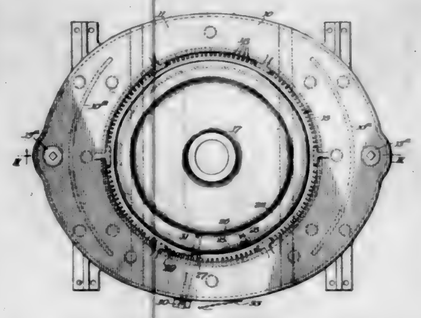
1,563,170. METHOD OF TEMPERING. JAMES CAREY DAVIS, Hinsdale, Ill. Filed Oct. 24, 1923. Serial No. 670,486. 24 Claims. (Cl. 148—21.)



6. The method of tempering metal which includes directing a plurality of series of streams of fluid against the metal, the volume of streams in the several series varying progressively.

1,563,171. APPARATUS FOR TEMPERING. JAMES CAREY DAVIS, Chicago, Ill. Original application filed Oct. 24, 1923, Serial No. 670,486. Divided and this application filed June 18, 1924. Serial No. 720,726. 21 Claims. (Cl. 266—6.)



5. A tempering apparatus comprising, in combination, a source of tempering fluid, and means for directing said fluid upon an article to strike it in distinct layers.

---

1,563,172. OPHTHALMOLOGIC INSTRUMENT. HENRY L. DE ZENG, Moorestown, N. J., assignor to De Zeng Standard Company, Camden, N. J., a Corporation of New Jersey. Filed Sept. 13, 1921. Serial No. 500,403. 1 Claim. (Cl. 88—20.)

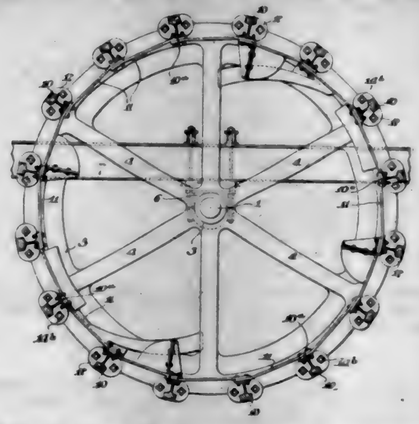
An ophthalmological instrument comprising a source of light, a light passage way extending therefrom, a reflector in line with the light passage way, a slide operative in the passage way beyond the light source, having three openings, progressively increasing in size, one of said openings having clear illumination and the other two having a ground glass screen fitted respectively therein.

---

1,563,173. COAL BREAKER OR CRUSHER. JOHN H. DOBBRES, St. Louis, Mo., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Filed May 8, 1924. Serial No. 711,778. 7 Claims. (Cl. 83—52.)

1. The combination, in a coal breaker, of a screening drum comprising a series of substantially flat screen

plates having edge portions in flat planes differing from each other and from the plane of the main body of the



plate; said edge portions being arranged in overlapping position, and means for securing the overlapping portions of said plates together.

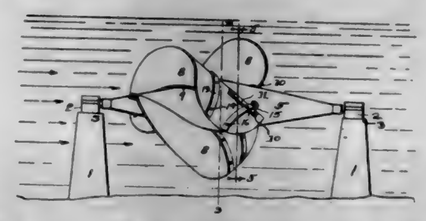
---

1,563,174. SELF-ADAPTING SLEEVE STRETCHER. JOHN H. DUMBLETON and EDWIN C. LINDBERG, Los Angeles, Calif. Filed June 27, 1924. Serial No. 722,823. 2 Claims. (Cl. 223—19.)

1. A self-adapting sleeve stretcher comprising a pair of bars having parallel longitudinal curved inner faces, leaf springs secured at their inner ends to the confronting faces of the bars, and hinges connecting the free ends of the springs of one bar to the free ends of the springs of the other bar, the tensions of the springs being exerted to press the bars apart after their separation a known distance and the retraction of the springs being adapted to draw the bars together after their compression to said distance.

---

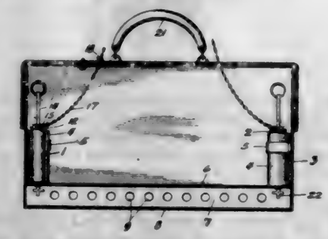
1,563,175. POWER WHEEL. CHARLES A. EDWARDS and CHARLES F. MESSER, Zillah, Wash. Filed Sept. 22, 1923. Serial No. 664,163. 1 Claim. (Cl. 170—133.)



A water-propelled wheel comprising a drum of elongated form having a central enlarged portion of substantial diameter, with opposite end portions of equal lengths, said end portions being conical from the central enlarged portion to the remote terminals of the drum; a plurality of blades on the drum and being relatively curved transversely; the greater portion of each blade being outstanding from the drum, and having a right angle edge flange conforming spirally with and secured to one of said conical end portions; the inner edge of the remaining portion of each blade being bent over the central enlarged portion, and conforming spirally with decreased pitch over the leading spiral to a relatively short part of the opposite end portion, thereby disposing the remaining part of the curved blades spirally and more abruptly, whereby to offer increased resistance to the water and increase the power of the wheel; a pair of braces secured to the drum; and an angle plate secured to said relatively short part of the drum, said angle plate having one of its flanges fastened to and between the blade and certain of the braces, thereby withstanding the water pressure due to the increased resistance.

---

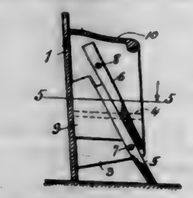
1,563,176. PROTECTIVE MEANS FOR THE CONTAINERS OF VALUABLES. AUGUST EIMER, New York, N. Y. Filed Jan. 30, 1924. Serial No. 689,445. 5 Claims. (Cl. 116—114.)



4. The combination, with a portable container for valuables, of a false bottom therein providing a space between it and the container base, said space provided with constantly open means of communication with the outside atmosphere, a handle for said container, a fluid receptacle within said container, said receptacle having closure means, and means for discharging its contents into said space, and closure release means extended outside the container for engagement with the carrier's hand that is grasping the container handle, whereby the closure release is automatically operable to permit discharge of the receptacle contents when the container is withdrawn from the carrier's grasp.

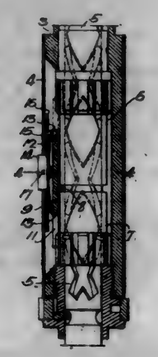
---

1,563,177. COMBINATION TABLE AND SEAT. CHARLES F. ETTWEIN, Lanagan, Mo. Filed Sept. 18, 1922. Serial No. 588,833. 2 Claims. (Cl. 155—43.)



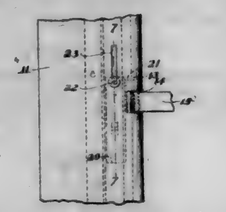
1. In a combined table and seat, a flat table top having opposite parallel sides one of which is adapted to serve as a back rest of a seat, when one edge of the top rests on the floor, two end members secured to said side of the top, a seat member having its ends respectively attached to said end members, two legs respectively pivoted to said end members, each adapted to be swung to two positions in which opposite ends of each leg are adapted to respectively rest on the floor for cooperating with the table top supporting the table top in the seat position, and means co-operating with said legs for supporting the table top in the table position.

**1,563,178. RATCHET TOOL.** THOMAS J. FEGLEY and GEORGE O. LEOPOLD, Philadelphia, Pa., assignors to North Bro's M'f'g Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 3, 1923. Serial No. 629,662. 4 Claims. (Cl. 145—54.)



3. The combination in a ratchet tool, of a casing having a recessed enlarged portion; two ratchet wheels mounted in the recess; a transverse key extending across the recess and spacing the ratchet wheels apart; a spindle extending into the casing and through the ratchet wheels; a sliding pawl having a projection at each end, said pawl resting on the key; a shifter engaging each end of the pawl; a slotted shell; and a projection on the shifter extending through the slot in the shell so that the shifter can be moved to shift the pawl into engagement with either one of the ratchet wheels, or with both of the ratchet wheels.

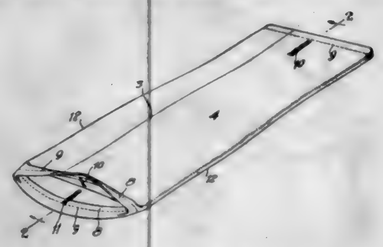
**1,563,179. POST-LOCKING MECHANISM FOR LOOSE-LEAF BINDERS.** HERBERT DEXTER FIELD, El Paso, Tex. Filed Aug. 2, 1924. Serial No. 729,796. 4 Claims. (Cl. 129—24.)



4. In a loose leaf binder, the combination of a strip forming a runway, a binding post, a locking member guided in said runway into and out of temporary locking relation to said post when said member is moved back and forth, said strip having a longitudinal slot therein, and removable means on said locking member and projecting into said slot to limit the movement of said locking member, the latter being movable into a permanent concealed locking position when the limiting means is removed.

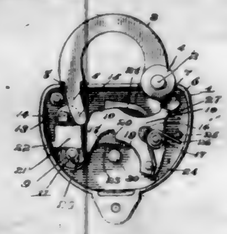
**1,563,180. SOFT CUFF.** ALBERT A. FOURNIER, Ottawa, Ontario, Canada. Filed May 11, 1925. Serial No. 29,586. 2 Claims. (Cl. 2—124.)

1. As an improved article of manufacture, a soft cuff of tubular form, with opposite edges free for rolling movement, the cuff being open at the ends and each end provided with two opposed registering button-holes to receive cuff buttons, the stitches of the button-holes



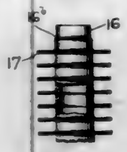
upon one side of the cuff being disconnected from the other side of the cuff, the said cuff being held against revoluble movement in use.

**1,563,181. PADLOCK.** SAMUEL R. FRAIM, Lancaster, Pa. Filed June 7, 1924. Serial No. 718,619. 7 Claims. (Cl. 70—105.)



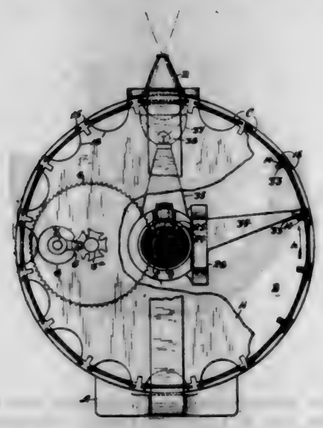
1. A padlock comprising a casing, a shackle, and a pair of locking units, said shackle having its heel pivoted and its toe free to be inserted in said casing, one of said locking units comprising a pivoted lever normally spring-actuated to engage the toe of said shackle, the other locking unit comprising a slotted bolt slidably and pivotally mounted on a single stud and adapted to engage the pivoted heel of said shackle in locked relation when the padlock is locked, said lever and bolt having bearing surfaces adapted to be engaged in sequence by a key for disengaging said lever from the shackle toe and said bolt from the shackle heel, respectively.

**1,563,182. RADIATOR UNIT.** FREDERICK GARGIULO, New Haven, Conn. Filed Mar. 24, 1921. Serial No. 455,065. 5 Claims. (Cl. 257—129.)



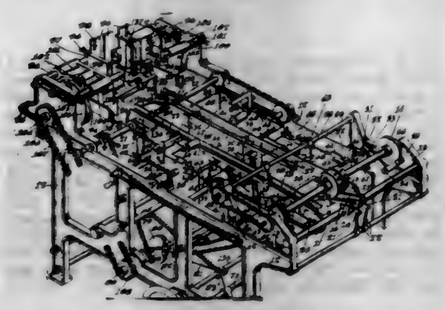
1. A radiator tube including a plurality of disk like sections, each section composed of a tubular portion and a flanged portion, said tubular portion having a reduced end forming an intermediate annular stop shoulder, said sections being nested together with said reduced ends entering the unreduced portions of the tubular parts of adjacent sections and contacting with the stop shoulders thereof, said shoulders being located so that the resulting tube has a wall consisting of two superposed layers at substantially all points throughout its length.

**1,563,183. PICTURE-PROJECTING MACHINE.** THOMAS W. GOODWIN, Berkeley, Calif., assignor of one-fourth to H. E. Malmsten, Berkeley, Calif. Filed May 31, 1922. Serial No. 564,827. 6 Claims. (Cl. 88—27.)



1. In a picture projecting machine of the character described a vertically disposed shaft, a sleeve shaft splined thereto and vertically movable thereon, an elongated cylindrical magazine supported by the sleeve shaft and movable vertically in unison with the same, means for intermittently rotating the first named shaft and the sleeve shaft in unison, means for imparting a vertical movement to the sleeve shaft and the magazine in unison during rotation of the first named shaft and the sleeve shaft, and means for imparting a partial rotary movement to the magazine at the end of a predetermined number of vertical movements.

**1,563,184. MACHINE FOR MAKING SET-UP BOXES.** HAROLD J. GOSS, Nashua, N. H., assignor, by mesne assignments, to The Lake Erie Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 26, 1923. Serial No. 647,849. 14 Claims. (Cl. 93—51.)

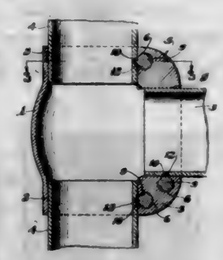


1. A machine for making wall boxes from blanks having corner flaps and intermediate foldable sections, comprising means for causing the blanks to travel, means for deflecting said intermediate sections while traveling, means for applying glue to the corner flaps while they extend outwardly, means for folding the blanks with said flaps and sections in overlapping relationship, means for holding the folded blanks temporarily in stationary position, and pressers movable toward the folded blanks while the latter are stationary.

**1,563,185. PROCESS OF PRODUCING COLOR-FILLED EMBROIDERED DESIGNS ON TEXTILE FABRICS.** PETER GOULED, Weehawken, N. J. Filed July 31, 1925. Serial No. 47,372. 3 Claims. (Cl. 41—26.)

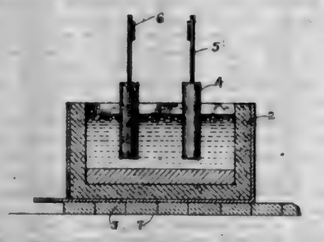
1. The process of producing a combined color-filled and embroidered design on fabric, consisting in producing an outline of the design on the fabric to be embroidered, making a tracing of the outline, making a stencil of the areas to be color-filled, from said tracing, painting the areas to be color-filled, on said fabric, by the use of said stencil, and embroidering the outline originally produced on said fabric.

**1,563,186. COUPLING FOR PIPE RAILINGS.** LOUIS G. HALLER, Chattanooga, Tenn. Filed Feb. 15, 1924. Serial No. 693,137. 1 Claim. (Cl. 28—54.)



A coupling for pipe railings comprising a socket adapted to receive a tubular rail, said socket having an integrally formed web at one side thereof, said web being provided with a transverse straight unyielding bore extending entirely through the same and having a V-shaped extension co-extensive therewith along the side next to the socket, said extension intersecting at its central portion the wall of the socket, and a straight pin co-extensive in length to and of substantially the same diameter as the transverse bore, said pin having a longitudinal rib extending throughout its length and corresponding in cross-sectional shape to the V-shaped extension of the bore and adapted to snugly fit the same when the pin is driven into the bore from either direction, either end of the said rib serving as a V-shaped cutting tool where traversing the socket to form a kerf in the exterior wall of said rail and, by remaining therein, to lock said rail in the socket member, with the ends of the pin substantially flush with the sides of the web, said pin being capable of being withdrawn from either end.

**1,563,187. PROCESS OF PRODUCING CALCIUM COPPER ALLOY.** WILLIAM GOOLD HARVEY, Niagara Falls, N. Y., assignor to American Magnesium Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 13, 1921. Serial No. 492,176. 11 Claims. (Cl. 204—19.)



1. The process of producing calcium copper alloy comprising electrolysing a molten calcium salt in the pres-

ence of a solid copper cathode until sufficient calcium has been taken up by the cathode for it to become molten at the temperature of the molten salt.

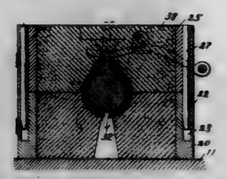
---

1,563,188. TREATING MOLTEN METALS WITH CALCIUM-COPPER ALLOYS. WILLIAM G. HARVEY, Niagara Falls, N. Y., assignor to American Magnesium Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Sept. 10, 1921. Serial No. 499,784. 4 Claims. (Cl. 75—1.)

1. The method of deoxidising aluminum bronze comprising adding to the molten metal an alloy of calcium and copper in such proportions that the alloy is brittle and which has a melting point substantially less than that of the treated metal.

---

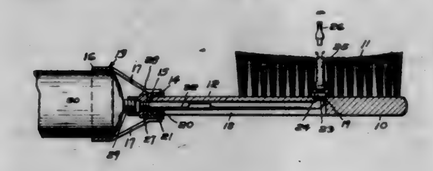
1,563,189. MOLD-FORMING DEVICE. GUSTAV A. HAUSHERR, Bayville, N. J. Filed June 26, 1925. Serial No. 39,877. 4 Claims. (Cl. 22—158.)



1. A device for forming molds comprising a base, a plurality of mold forming elements supported on said base, means for preventing shifting movement of one of said members relative to the other member, a pattern carrying member interposed with respect to the two members and adapted to support patterns interiorly thereof, and means carried by one of said members for elevating the pattern carrying member.

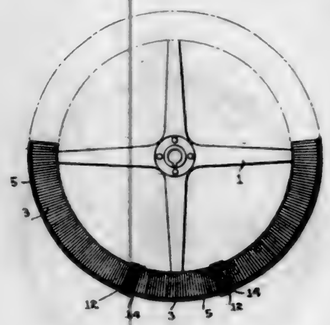
---

1,563,190. FOUNTAIN BRUSH. CHARLES HARRY HOUSE, Arkansas City, Kans. Filed July 24, 1925. Serial No. 45,769. 3 Claims. (Cl. 15—135.)



1. A fountain tooth brush embodying a brush head comprising a back and bristles carried by the back, said back having a longitudinal groove and a transverse opening, a feed tube arranged within the longitudinal groove and having a transverse extension passing through and beyond the transverse opening, a clamping nut carried by the transverse extension and engaging the back, a flexible tube mounted upon the end of the transverse extension and leading through the working face of the bristles, a socket receiving the rear end of the back and having an opening formed therein to receive the feed tube, a tooth paste tube receiving socket connected with the first named socket, and a coupling cap having screw-threaded engagement with the rear end of the said tube and adapted to receive and have a screw-threaded engagement with the screw-threaded neck of the tooth paste tube.

1,563,191. WRAPPING FOR STEERING WHEELS. WALTER HUGHES, Los Angeles, Calif. Filed Dec. 10, 1924. Serial No. 755,093. 12 Claims. (Cl. 74—88.)



1. In a steering wheel, the combination with a steering wheel rim, of a covering therefor, consisting of a three strand cord whipping, said covering having a rib or bead adjacent the outer edge of the rim of the wheel.

---

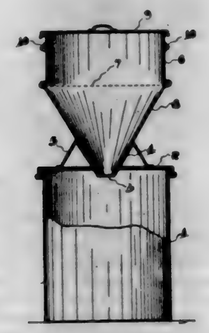
1,563,192. COLLAPSIBLE TUBE. WILLIAM C. HUNTOON, Jr., East Greenwich, R. I. Filed Apr. 17, 1925. Serial No. 23,849. 4 Claims. (Cl. 221—60.)

1. In combination with a collapsible tube having a collar spaced above the neck base, to form a groove, a wire in the groove having its ends spaced apart and having an intermediate straight part, a cap formed with a circular groove, and a second wire having an intermediate part coiled about the straight part of the first wire and engaged with the neck base and having its ends crossed and engaged in the groove of the cap in embracing relation thereto, said collar of the tube neck having a portion thereof equalling approximately the distance between the spaced ends of the first wire extended downwardly to lie in the space between the ends of the first wire so as to engage such ends and hold the first wire against rotation.

---

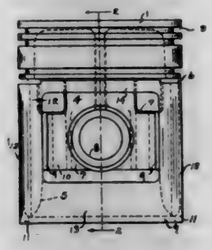
1,563,193. ASH SIFTER. CECIL PERCY INGLETON, Toronto, Ontario, Canada. Filed June 16, 1925. Serial No. 37,589. 2 Claims. (Cl. 83—60.)

1. In an ash sifter, the combination of a receptacle top having an opening formed therein; a sifter casing supported by and rotatable on a vertical axis relative to the top, said sifter casing having a cone-shaped portion having an outlet in its lower end adapted to discharge through said opening, said top having a funnel-shaped member surrounding said opening and adapted to receive the cone-shaped portion of the sifter casing, the discharge opening of the funnel-shaped member being small relative to the size of the top; and a sieve mounted in and rotatable with the casing on said vertical axis.



---

1,563,194. PISTON. FRANK JARDINE, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 31, 1925. Serial No. 47,213. 10 Claims. (Cl. 74—108.)



1. A composite piston comprising a head having a ring flange, boss carrying walls depending from the head oppositely disposed slippers, flexible means connecting the slippers to the bosses, the slippers being otherwise disconnected from the head, and a skirt assembled in telescoping relation with and bearing on the said slippers, the skirt having a smaller coefficient of expansion than the remaining parts of the piston.

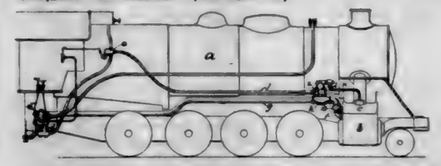
---

1,563,195. GARMENT SUPPORTER. JULIO U. JIMENEZ, New York, N. Y. Filed Aug. 21, 1924. Serial No. 733,366. 3 Claims. (Cl. 241—7.)

1. In combination, a member for attachment to a shirt or the like, and a member for attachment to a garment to be suspended therefrom, the first member including a button and a closed loop for engaging the button through a garment, a flexible member depending from the loop, and having a rigid cross bar, the second member including a plate of substantially triangular shape, arranged with its base upward, and adapted to be connected to the garment to be suspended, said plate having a tongue at its lower end, offset laterally to engage the bar.

---

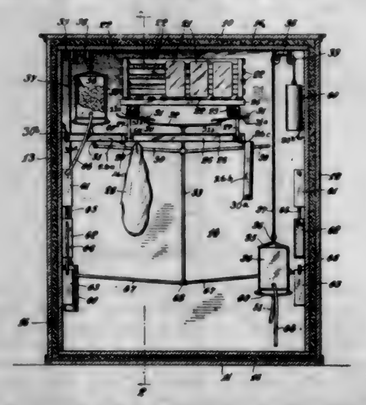
1,563,196. INJECTOR. STRICKLAND L. KNEASS, Philadelphia, Pa., assignor to William Sellers & Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 5, 1924. Serial No. 730,293. 12 Claims. (Cl. 162—1.)



1. In combination with an injector operated wholly or partly by exhaust steam, an exhaust regulating and cut-off valve, a live steam admission valve to the exhaust steam supply, and means to cause both valves to interact automatically.

---

1,563,197. MEAT-MARKET REFRIGERATOR. OSMER J. LASHER, Waterbury, Conn. Filed Feb. 28, 1925. Serial No. 12,807. 6 Claims. (Cl. 62—81.)

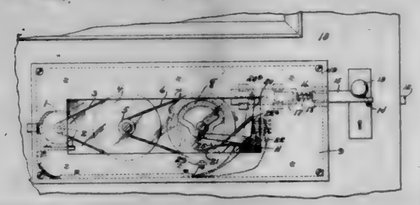


5. In a meat market refrigerator, a casing, said casing containing a receptacle for block ice, means for permitting said receptacle to be replenished, an auxiliary cham-

ber for a freezing mixture movably mounted in said casing and normally located near the roof thereof alongside said receptacle, and manually operated means for temporarily lowering said chamber so that it may be conveniently replenished from the floor of said casing, and a counterweight for automatically maintaining said chamber in operating position at the top of said casing.

---

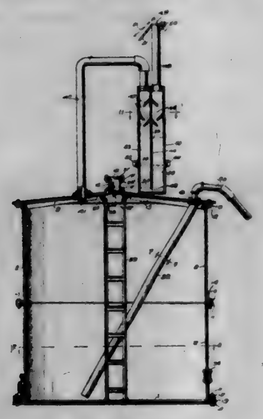
1,563,198. ELECTROMECHANICAL DOOR-RELEASING MEANS. ERNEST LEDBETTER, St. Louis, Mo. Filed Apr. 4, 1925. Serial No. 20,876. 3 Claims. (Cl. 70—50.)



1. Electromechanical door releasing means comprising a latch bolt complementary to a door, a bar connected with and adapted on movement thereof in one direction to retract said bolt, and a rotor, a cam movable therewith and a bell crank for retracting said bar, said rotor being operable by an electric motor, and said motor being arranged in a normally interrupted circuit with a source of electric energy and switch means, and means being provided on the rotor and on the bell crank for interrupting and reestablishing the electric circuit.

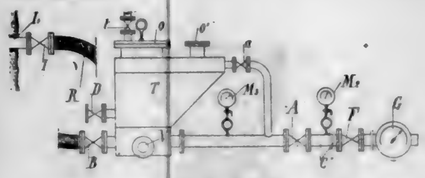
---

1,563,199. GAS-TIGHT STEEL TANK. HARRISON R. LELAND, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Nov. 11, 1920. Serial No. 423,291. 2 Claims. (Cl. 220—85.)



1. A pressure regulator for tanks comprising a casing, a partition wall arranged substantially centrally thereof and extending from the top of the casing to a point near the bottom to provide a pair of chambers communicating with each other at the bottom of the casing, each of said chambers being provided with openings arranged at the top thereof, one of said openings being connected to an inlet pipe and the other of said openings to an outlet pipe, a normally open valve arranged in said outlet pipe, and means for closing said valve.

1,563,200. FILLING UP, PUDDLING, WARPING, CONCRETING, CEMENTING, ETC., BY MEANS OF FLUSHING WITH WATER UNDER PRESSURE. GEORGES JOSEPH MICHEL LEICKNAM, Jarny, France. Filed Nov. 30, 1923. Serial No. 677,920. 3 Claims. (Cl. 83—73.)



1. Process for purposes of the character described which consists in loading the materials into a receptacle, closing the loading opening of the receptacle, connecting the receptacle with a source of water under pressure and removing any air which may be contained within the receptacle, establishing communication between the receptacle and the source of water under pressure to produce in the former the higher static pressure obtainable from the latter, and projecting from the receptacle the material and water mixture by the vis viva acquired in accordance with the static pressure previously established in the receptacle.

---

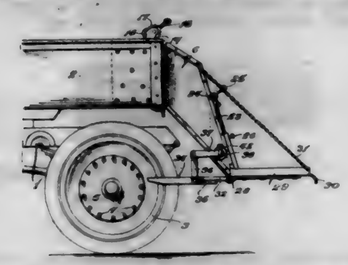
1,563,201. EXTENSION STEPLADDER. JOHN F. LEICHT, Shelby, Mich. Filed Mar. 14, 1924. Serial No. 699,248. 1 Claim. (Cl. 228—23.)

An extension ladder comprising complemental sections hingedly connected, each section including side rails, locking members rotatably mounted upon the rails of one section a short distance from the hinged joint, longitudinal strips secured to the rails of the other section and projecting to overlap the hinge joint and engage the rails of the section carrying the locking members and slotted to receive the latter, and a transverse strip connecting the slotted ends of the longitudinal strips and having their outer ends bent laterally to embrace the outer sides of the rails carrying the locking members when the ladder is extended.

---

1,563,202. APPARATUS FOR USE IN REPAIRING ROADS. LELAND E. LENTZ, Delphos, Ohio. Filed July 13, 1923. Serial No. 651,319. 4 Claims. (Cl. 275—2.)

1. A device for the purpose set forth comprising a hopper constructed to be secured to the discharge end of the tiltable body of a dumping vehicle to receive material from said body, a distributing pan mounted upon the delivery end of the hopper to receive material therefrom, and means to be operated by a wheel of the vehicle whereby to impart up and down motion to the



pan relative to the hopper, said means being normally free of the vehicle wheel and being brought into engagement therewith by tilting of the body.

---

1,563,203. PROCESS OF PRODUCING VISCOUS LIQUIDS AND PRODUCT THEREOF. LEON LILIENFELD, Vienna, Austria. Filed Jan. 10, 1921. Serial No. 436,382. 4 Claims. (Cl. 196—54.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Process of making high boiling viscous oily liquids which comprises bringing acetylene into contact with coal tar hydrocarbons, boiling at above 140° C., in the presence of aluminium chloride.

4. As new products, the herein described oils which may be produced by reacting upon coal tar hydrocarbons boiling at above 140° C., with acetylene in the presence of aluminum halides, such products being colorless to yellow oils having a marked blue fluorescence and a high viscosity and being unsaponifiable and having lubricating properties and which distill over, from the oily material remaining after removing the aluminum halides, at between 85 and 260° C., under a pressure of 20 mm. of mercury, such oils being composed essentially of aromatic hydrocarbons, practically free from aliphatic hydrocarbons, boiling between about 180° C. and about 300° C., at a pressure of about 35 mm. of mercury, having a specific gravity a little greater than unity, and being freely miscible with hydrocarbon oils of the aliphatic and aromatic series, nitrobenzene, chlorbenzene, chloroform, carbon bisulphide and carbon tetrachloride.

---

1,563,204. PLASTIC MASS AND PROCESS OF MAKING SAME. LEON LILIENFELD, Vienna, Austria. Filed Jan. 11, 1921. Serial No. 436,605. 21 Claims. (Cl. 106—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)

19. The process of plasticizing ethers of polysaccharides which comprises the addition thereto of oils as herein described, the same being formed by the action of acetylene on the constituents of tar oil boiling above 140° C., in the presence of a halogen compound of aluminum.

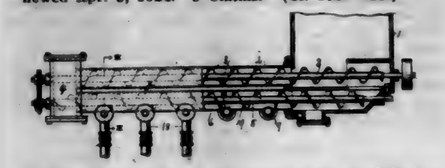
20. A new composition capable of being molded and set comprising an aralkyl ether of cellulose.

---

1,563,205. INSULATING GOODS AND PROCESS OF PRODUCING SAME. LEON LILIENFELD, Vienna, Austria. Filed May 31, 1921. Serial No. 473,833. 16 Claims. (Cl. 106—37.)

12. An insulating material containing as essential constituents, an ether of a cellulosic body in admixture with a normally non-volatile hydrocarbon capable of imparting plasticity, such hydrocarbon being a nonconductor of electricity, and having a high boiling point.

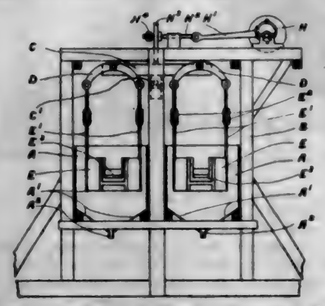
1,563,206. MECHANISM FOR FEEDING POWDERED MATERIAL. CHARLES LONGENECKER, Philadelphia, Pa. Filed Sept. 29, 1921, Serial No. 504,130. Renewed Apr. 5, 1924. 5 Claims. (Cl. 198—213.)



1. The combination of an unobstructed conduit having a plurality of openings in spaced relation in its lower side and a rotating screw for moving the material along the conduit, the blade of the screw being formed in sections located intermediate adjacent openings and adapted to move forward material which will be passed beyond a preceding port.

---

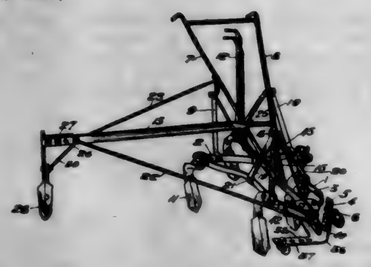
1,563,207. JIGGER. WILLIAM JOSEPH LYNCH, Gympie, Queensland, Australia. Filed Dec. 1, 1921. Serial No. 519,250. 3 Claims. (Cl. 83—80.)



1. A jigger including a frame, a plurality of hutches supported by the frame, a partition arranged in each hutch and dividing the interior of the hutch into two compartments, a box arranged in each hutch and adapted to discharge ore into one of said compartments of the hutch in which the box is arranged, a chute for each box adapted to discharge stones and gangue into the other compartment of the hutch in which the box is arranged, extensible rods supporting each of said boxes, yokes connected to said rods, a rocking beam carrying said yokes, and means for rocking said beam and jarring said boxes.

---

1,563,208. ATTACHMENT FOR CULTIVATORS. ALEXANDER MCANGUS, Honolulu, Territory of Hawaii. Filed May 25, 1922. Serial No. 563,594. 4 Claims. (Cl. 97—179.)

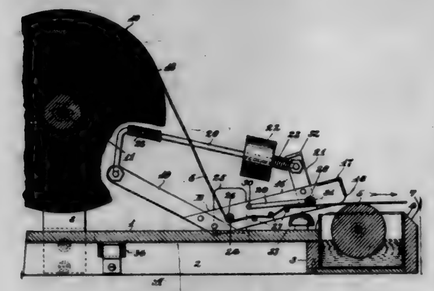


1. An attachment for cultivators, comprising an implement-carrying bar having a part adapted for connection with a cultivator and another part adapted to

extend laterally from said cultivator, a ground-engaging implement pivotally connected to said bar at a point offset from said laterally-extending portion of the latter and adjustable about its pivotal axis, said attachment including a system of bracing comprising rods, one extending from the pivotal axis of said implement to a point between the ends of the laterally-extending portion of said bar and the others having one of their ends connected to said point on said bar and their other ends adapted, respectively, for connection to separate points on said cultivator.

---

1,563,209. GUMMED-TAPE-SEALING MACHINE. JOSEPH HENRY MCINTIRE, Brooklyn, N. Y., assignor of one-half to Louis H. Kaplan, Brooklyn, N. Y. Filed Sept. 16, 1924. Serial No. 738,051. 8 Claims. (Cl. 91—14.5.)



1. An apparatus of the character described, comprising a moistening device, a tape holding cradle having a tearing edge thereon and movable from one extreme position to another, and a movable weight adapted to hold the cradle in either of the extreme positions.

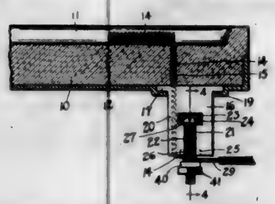
8. A machine of the character described, comprising a base, a box at one end of the base, a liquid tank in the box, a moistening roll in the liquid tank, a pair of uprights connected to the base, one of which is movable and removable, said uprights adapted to support a roll of gummed tape, a cradle pivotally mounted on the base between the uprights and the moistening roll and having a tearing edge at its forward end, devices on the cradle supporting the tape, a rod connecting the respective end portions of the cradle, a movable weight on the rod, cushions on the rod receiving the impact of the weight, cushions on the base receiving the impact of the cradle, a bail pivotally connected to the cradle, a roller carried by the free end of the bail and constituting an automatic drop adapted to engage the free portion of the tape and to hold it away from the tearing edge, and an angle bracket fixed to the cradle to limit the rearward movement of the bail.

---

1,563,210. PIPE HOLDER. JOSEPH H. MCINTIRE, Brooklyn, N. Y., assignor of one-third to Louis H. Kaplan, Brooklyn, N. Y., and one-third to Stephen A. McIntire, New York, N. Y. Filed Nov. 24, 1924. Serial No. 751,994. 2 Claims. (Cl. 131—12.)

1. A pipe holder composed of wire having feet at its ends, and outwardly bowed portions in runs of the wire intermediate the ends of the support for the reception of a pipe, said bowed portions having an opening to receive and support the bowl of the pipe, and said opening having a restricted end to receive a portion of the stem of the pipe.

1,563,211. CONNECTION BLOCK FOR BURNERS OF ELECTRIC RANGES. ROBERT H. MACINNES, Hamilton, Ontario, Canada, assignor to D. Moore Company, Limited, Hamilton, Canada. Filed July 6, 1925. Serial No. 41,701. 3 Claims. (Cl. 219—37.)



1. An electrical connecting device comprising a refractory insulation block having a longitudinal groove in one of its lateral surfaces communicating with a transverse slot at the upper end thereof and in the same side of the block and also communicating with a nut shaped socket formed in the bottom surface of the block at the opposite end thereof, a bolt confined in said groove with its head occupying said slot and abutting the ends of the groove where they converge with the slot, said bolt being provided with a nut adapted to occupy said socket, said nut thereby being restrained from rotation, and a heating resistance wire and an electrical lead device attached to the protruding end of said bolt so as to form an electrical connection.

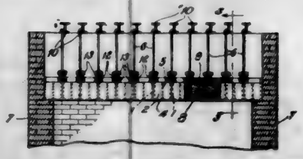
---

1,563,212. ANIMAL-TETHERING DEVICE. JOHN J. MADIAR, West Frankfort, Ill. Filed July 8, 1925. Serial No. 42,236. 5 Claims. (Cl. 119—120.)

1. A device of the character described comprising a series of posts, an eye carried by each of said posts, said eyes having cut away portions, a cable suspended from said posts and received in said eyes, a member slidably mounted on said cable, and means for attaching an animal to said slidable member, said means for attaching said animal being of a size to pass through the cut away portions in said eyes.

---

1,563,213. FIRE ARCH. CHAUNCEY L. C. MAGEE, Chicago, Ill. Filed Sept. 5, 1922. Serial No. 586,332. 10 Claims. (Cl. 110—99.)

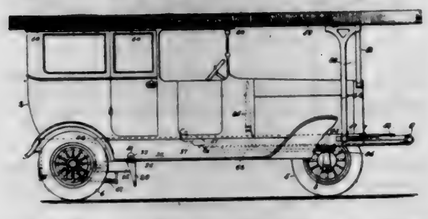


1. A fire arch constructed from hollow tiles of strong refractory material, presenting a smooth surface to the fire, each tile having a filling of heat insulating material,

whereby said hollow tile arch serves by said filling of each tile to reduce the escape of heat upward through said arch from the fire below, and each tile having provisions adapting it especially and only for overhead position in said arch, without obstructing the insertion of said filling in each tile.

---

1,563,214. AUTOMOBILE. SOLOMON S. MARAN, New York, N. Y. Filed Oct. 25, 1924. Serial No. 745,926. 7 Claims. (Cl. 180—88.)



1. In an automobile, the combination with stopping means therefor, a movable frame at the top of the car tripping means normally holding the stopping means out of operation, and means connecting the frame with the tripping means whereby a slight movement of the movable frame releases the tripping means and brings the car to a quick stop.

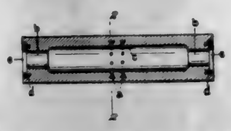
---

1,563,215. MAGNIFYING PAPER WEIGHT. PETER H. MEYER, Buffalo, N. Y. Filed May 4, 1922. Serial No. 558,424. 2 Claims. (Cl. 120—82.)

1. A combined paperweight and magnifying glass comprising a single piece of glass which is shaped to form a base and having an integral top portion having an upper convexly curved face which is in focus with the plane on which the base rests, the bottom face of the article being concaved so that the article rests on the edge portions of the base to prevent injury to said concaved face, the article having substantially upright and relatively high surface portions which extend from the base to the convex upper face.

---

1,563,216. CAST ROLLER FOR MILLS. OTTO MOOG, Brunswick, Germany, assignor to Amme, Giesecke & Konegen, Aktiengesellschaft, Brunswick, Germany, a Corporation of Germany. Filed Jan. 20, 1925. Serial No. 3,647. 8 Claims. (Cl. 83—12.)



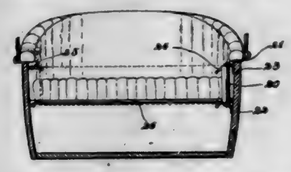
1. Cast roller for grain mills, for mills for hard material, and the like, comprising a roller having its axial bore enlarged between points adjacent its opposite ends and having rivets cast into its body with their ends projecting radially into said enlarged bore and adapted to have weighted bodies secured thereto for balancing the roller.

1,563,217. MECHANICALLY-OPERATED PENCIL. ARTHUR E. MOORE, Conimicut, R. I., assignor to Rex Manufacturing Co., Providence, R. I., a Corporation of Rhode Island. Filed July 14, 1925. Serial No. 43,575. 4 Claims. (Cl. 120—9.)

1. In a mechanically-operated pencil, a barrel portion, a point sleeve bushing secured to one end thereof, a tapered sleeve fitted over the bushing having one end shouldered against the barrel, and a point end member secured to said bushing and provided with a shoulder for engaging the adjacent end of said sleeve by which the sleeve is held against the barrel.

---

1,563,218. VEHICLE-SEAT ATTACHMENT. THOMAS H. MORRISON, Manitowoc, Wis. Filed May 31, 1924. Serial No. 717,042. 1 Claim. (Cl. 155—189.)



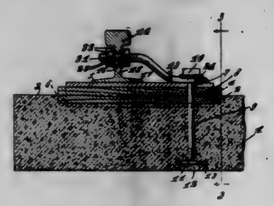
A guard for vehicle seats comprising an apron of fabric material, and means for stretching said apron across the front of the seat; said means including a spring roller, folding brackets for said roller secured at one side of the seat, fastenings at the bottom and free edges of the apron, and corresponding fastenings on the sides and bottom of said seat whereby said apron may be completely removed and the brackets laid flat against the side of the seat.

---

1,563,219. DETONATOR FOR LIQUID-OXYGEN EXPLOSIVES. CHESTER MOTT, Denver, Colo., assignor, by mesne assignments, to Purox Company, Denver, Colo., a Corporation of Colorado. Filed Apr. 29, 1924. Serial No. 709,781. 20 Claims. (Cl. 102—6.)

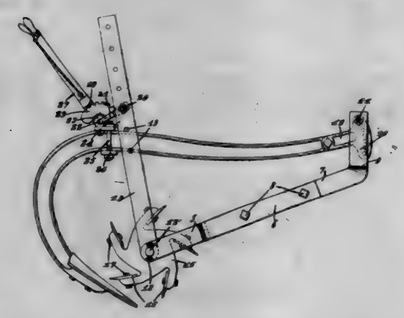
10. A detonator comprising: a tubular member bent into the form of a loop.

1,563,220. COMBINED RAIL ANCHOR, CHAIR, AND CUSHION. GEORGE ERNEST NAGEL, Greenville, Ohio. Filed July 24, 1925. Serial No. 45,917. 4 Claims. (Cl. 238—285.)



2. A device for the purpose set forth comprising a cushioning element for mounting on a concrete cross tie, a rail chair mounted on said element, a securing element seating on said chair and including an outer portion extending through the web of a track rail, said outer portion carrying means engaging the sides of the web for clamping said element therewith, and means extending through that part of the element mounted on the chair and further extending through the latter and cushion and embeddel in the tie for anchoring the track rail in position.

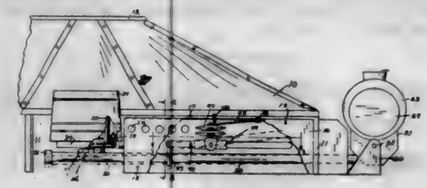
1,563,221. STALK CUTTER. WILLIAM S. NIX, Duncan, Okla. Filed Dec. 7, 1923. Serial No. 679,178. 1 Claim. (Cl. 55—61.)



In combination with a shovel plow and the stock thereof, a frame including side members adjustably connected with the plow stock, suspending bars pivotally connected with the side bars, a supporting plate adapted to be clamped on the plow stock, eye bolts on the supporting plate, an adjusting rod having right angled extremities mounted within the eye bolts, the right angled extremities being connected with the suspending bars to raise and lower the suspending bars, a rotary chopping member carried at the lower ends of the suspending bars, and means for operating the rod to raise or lower the suspending bars and chopping member.

1,563,222. THERMOSTATIC CONTROL OF HEATING APPLIANCES FOR BROODERS. JOHN B. OLSON, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis. Filed Mar. 8, 1924. Serial No. 697,929. 18 Claims. (Cl. 236—6.)

1. In a device of the character described, the combination with a fuel system comprising a supply tank, a pipe, and a burner in rigid connection and fulcrumed for oscillation, whereby such oscillation will vary the depth of fuel at the burner; of a thermostat operable on said fuel system to oscillate the said system about its fulcrum and thereby to control the heat generated by the

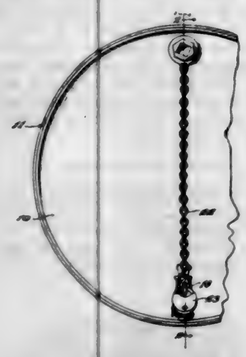


burner, said system being organized to present a substantially constant load to said thermostat irrespective of variations in the quantity of fuel in said tank.

1,563,223. NEEDLE THREADER. WALTER PARSONS, Brooklyn, N. Y. Filed Jan. 8, 1925. Serial No. 1,252. 4 Claims. (Cl. 223—86.)

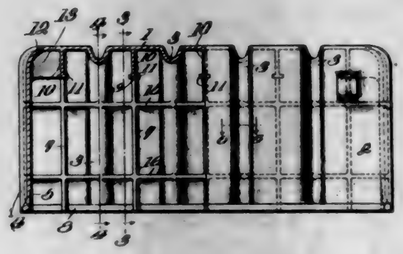
1. A needle threading device, which comprises a chute portion, a depressible plate in the bottom of the chute on which the needle is adapted to rest, and means associated with the plate and the chute to guide the needle into a definite position.

1,563,224. LOCKING DEVICE FOR TANKS. WILLIAM PEABODY, White Cloud, Kans. Filed July 14, 1924. Serial No. 726,010. 3 Claims. (Cl. 70—125.)



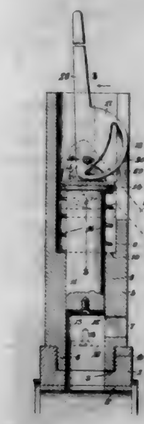
1. The combination with a tank having a filling opening and a draining faucet, of a common locking device for the filling opening and the faucet, said locking device including a plug threaded in the opening, a connecting member non-revolubly secured on the plug, the faucet being provided with an operating lever, and an element adapted to simultaneously engage the lever, the connecting member and the faucet to firmly lock them together.

1,563,225. ANNEALING BOX. EMIL C. RAUSCHENBERG, Wheeling, W. Va., assignor to Wheeling Mold & Foundry Co., Wheeling, W. Va. Filed Dec. 23, 1924. Serial No. 757,626. 8 Claims. (Cl. 263—49.)



1. An annealing box having its sides and top walls provided with continuously transversely extending inwardly projecting corrugations, the sides and top walls provided with continuously transversely extending inwardly projecting ribs located substantially midway between the corrugations, the tops of the said ribs being of a width substantially greater than the depth of the corrugations, for the purpose described.

1,563,226. PORTABLE LUBRICANT OR GREASE CUP FILLER. RICHARD W. REED, Washington, D. C. Filed Apr. 26, 1924. Serial No. 709,279. 1 Claim. (Cl. 221—47.4.)

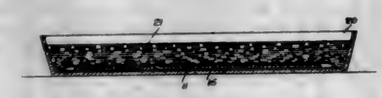


A portable lubricant or grease cup filler comprising a tubular body portion adapted to contain a body of lubricant or grease, a normally retracted spring controlled lubricant expelling plunger permanently arranged completely within said body portion intermediate the ends of the latter, a rotatable support extending through and journalled in said body portion, and a manually operated plunger shifting device connected eccentrically thereof to said means and having edge engagement with said plunger for shifting it to expel the lubricant, said body portion provided at one side with a lengthwise extending slot to constitute a clearance for said device.

1,563,227. LAMP TESTER. GEORGE H. RIEBETH, Minneapolis, Minn., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Sept. 29, 1921. Serial No. 504,112. 6 Claims. (Cl. 175—183.)

6. In a device of the class described, a block having a bore therethrough of greater diameter than the head terminal of a dry cell battery, said bore being adapted to receive the base of a lamp from its outer end, a mounting to support a battery with the head terminal thereof within the inner end of said bore, and an electrical conductor having one terminal arranged to contact with the base of the battery and a second terminal reaching into said bore and terminating at a point adjacent to the position occupied by the battery terminal therein.

1,563,228. DAYLIGHT DEVELOPING OF PHOTOGRAPHIC PLATES AND FILMS. GREGORIO DELFIN RODRIGUEZ, Leon, Nicaragua. Filed Oct. 29, 1921. Serial No. 511,259. 3 Claims. (Cl. 95—89.)



1. The herein described method for daylight developing of exposed sensitized plates and films, which consists in transferring the exposed sensitized plate or film under the exclusion of light into an envelope of inactinic material, and then immersing the envelope with the plate or film therein in a developer containing a black inert substance to render the developer opaque.

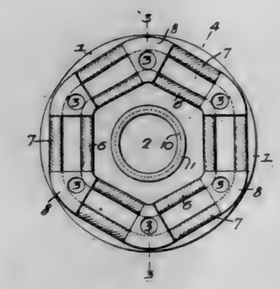
1,563,229. TREAD AND RISER MARKER. MERLE T. SANDERS, Ashland, Ky. Filed Feb. 14, 1924. Serial No. 692,721. 1 Claim. (Cl. 33—98.)

A stair tread and riser marker comprising, a main bar of substantial length, a closed guide collar surrounding and depending from each end of said main bar, a pair of parallel end opposed bars shiftable longitudinally of said main bar through said guide collars, a rectangular collar of greater length than said other collars surrounding each inner end of each shiftable bar and said main bar and having its upper end extended above the main bar, securing members extending through the lower end of each of the last mentioned collars into and securing the same to a shiftable bar,

a locking screw extending through the upper end of each collar of greater length and having a bearing plate swivelled thereto within the collar and bearing upon the top of the main bar to lock the bars together, a link member pivotally secured at one end to the outer end of each shiftable bar, a terminal bar pivotally secured at one end to the other end of each link, and tightening means at each pivotal point for securing the links and terminal bars in position.

---

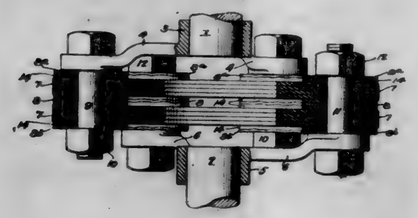
1,563,230. FLEXIBLE DISK FOR COUPLINGS. CARL A. SCHELL, Cleveland, Ohio, assignor to Thermoid Rubber Company, Hamilton Township, N. J., a Corporation of New Jersey. Filed July 12, 1921. Serial No. 484,254. 3 Claims. (Cl. 64—96.)



1. A flexible disk for flexible couplings consisting of a body portion of fabric and rubber vulcanized; rings of cords at each side of the disk; pads, said disk having a series of bolt holes; and pads at the bolt holes enclosing the cords.

---

1,563,231. DISK FOR FLEXIBLE COUPLINGS. CARL A. SCHELL, Cleveland, Ohio, assignor to Thermoid Rubber Company, Hamilton Township, N. J., a Corporation of New Jersey. Filed July 10, 1920. Serial No. 395,811. 3 Claims. (Cl. 64—96.)

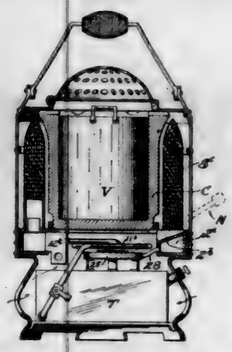


1. A transmission disk made of fabric and rubber and having a series of bolt holes therein, said disk being thickened at the bolt holes by addition of integral layers of like material, whereby the moment of flexure is carried away from the bolt holes.

---

1,563,232. OIL AND GAS BURNER. FRANK T. SCHLOTZHAUER, San Francisco, Calif. Filed July 6, 1921. Serial No. 482,681. 6 Claims. (Cl. 158—62.)

6. In an oil burning stove an annular gaseous fuel chamber, a retort arranged within the circular chamber and surrounded thereby and which chamber is connected to the discharge end of the retort, a preliminary igniting device including a pan arranged below the retort to receive an initial charge of combustible material for initially heating the retort, and a gas con-



nection between the said chamber and the said device for supplying a portion of the generated fuel to the igniting device after generation has started in the retort.

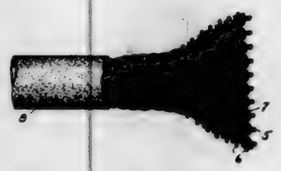
---

1,563,233. KNITTING NEEDLE. ROBERT W. SCOTT, Babylon, N. Y., assignor to Scott and Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed Dec. 30, 1922. Serial No. 609,850. 2 Claims. (Cl. 66—5.)

1. A two-part knitting machine needle, one part having an open side groove in its rear portion to receive and guide a tail piece on the other, the adjacent edges of the shanks of the two parts forward of said tail piece having a guiding groove connection.

---

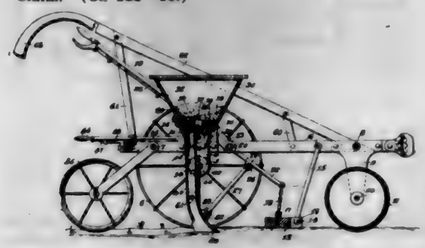
1,563,234. FLEXIBLE NONMETALLIC ELECTRIC CONDUIT. HENRY M. SHORT, Penn Yan, N. Y. Filed Jan. 30, 1922. Serial No. 532,659. 1 Claim. (Cl. 247—40.)



A single wall, flexible, non-metallic electric conduit comprising longitudinal tension cord members of fibrous flexible material, a stiffer continuous helical coil member formed of fibrous material, a tie member tightly knitted about said coil and cord members and formed of soft fibre and having loops tightly holding portions of said tension cord members between the adjacent turns of said coil member, said members being embedded in each other at the points of contact, parts of said loops and said tension cord members and said coil member forming a smooth inner surface of said conduit, and a fireproof and waterproof composition covering the outside of said conduit and impregnating and stiffening the outer parts of said members and securing said tension cord members to said helical coil member.

---

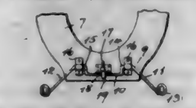
1,563,235. PLANTER. ELIZABETH B. SMITH, Marvell, Ark. Filed July 26, 1923. Serial No. 653,952. 1 Claim. (Cl. 111—59.)



An agricultural machine comprising a rectangular frame, a combined furrow opener and seed conductor member depending therefrom and disposed at the longitudinal center thereof, that part of said member forming the furrow opener being pivoted, an adjustable incline lifting lever pivoted intermediate its ends to one side of said frame and having its lower portion bent at right angles to the main portion and extending transversely across the frame, a lug depending from the end of said transverse portion, and a rod pivotally connected at its upper end to said lug and at its lower end to the pivoted part of said member.

---

1,563,236. PORTABLE TOILET SEAT. LAYTON F. SMITH, Philadelphia, Pa. Filed Feb. 19, 1925. Serial No. 10,212. 1 Claim. (Cl. 155—151.)

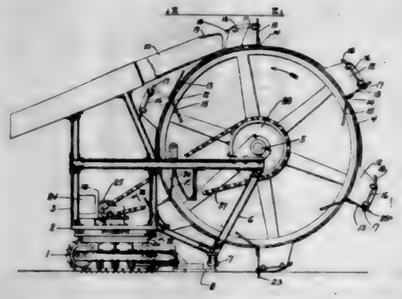


A portable toilet seat having an opening therein and provided with spaced bearings on the under surface and at opposite sides of the seat adjacent to said opening, in combination with supports for the opposite ends of said seat each comprising a bar having an intermediate portion which extends crosswise beneath and in close proximity to the under side of the seat between certain of said bearings, said bar at the opposite ends of said intermediate portion having off-sets to said intermediate portion which are engaged by two of said spaced bearings, and extend therethrough to provide pivots for the bar; the free ends of said offsets diverging and spread apart to form legs which extend away from the said bearings, said legs being bent at an angle with respect to the portion that lies between said bearings, so that when said free ends of the bar are swung outwardly away from the under side of the seat to operative position below the seat, when forming a support for the latter, the position of the intermediate portion of the bar between the spaced bearings will form a crosswise bottom brace against the under side of the seat between said bearings, whereby to brace the seat at its under side adjacent said opening.

---

1,563,237. LOADER. FRANK O. STALLMAN, San Francisco, Calif. Filed May 28, 1925. Serial No. 33,895. 9 Claims. (Cl. 37—9.)

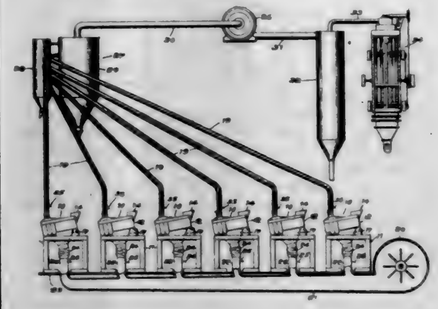
1. A loader comprising the combination of a portable carriage, a relatively large wheel mounted on a horizontal axis thereon, a plurality of scoop buckets carried in spaced relation on the periphery of the wheel, a portion of each bucket being collapsible relative to the remainder of the bucket, power means for rotating the wheel in one direction, a chute cooperating with the buckets to receive material therefrom as the wheel is



rotated in the said one direction, means permitting the said portion of each bucket to collapse at the chute to permit the buckets to pass the chute, and means for automatically re-forming the buckets after they have passed the chute.

---

1,563,238. CONCENTRATING UNIT. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Mar. 9, 1923. Serial No. 623,890. 2 Claims. (Cl. 83—54.)



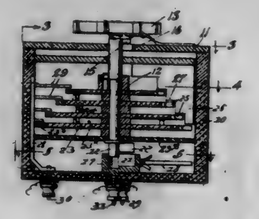
1. A concentrator unit comprising in combination, a series of concentrator tables each having an enclosed deck, a deck surface therein, and an air chamber below the deck surface; means for supplying air under pressure to each deck from a common source, comprising a fan and conduits for conducting air under pressure from the fan to each deck; and means for removing the dust laden air from the different decks comprising an exhaust dust collector, an auxiliary dust collector connected to the exhaust dust collector between the latter and the decks to form a container adapted to receive the discharge ends of the different conduits and to provide a settling chamber, separate branch conduits leading from each deck to the auxiliary dust collector, and a suction fan for sucking the dust laden air from the different decks successively through the conduits, auxiliary dust collector and suction dust collector.

---

1,563,239. COMBINATION AUTOMOBILE LOCK. RALPH A. STEWMAN, Akron, Ohio. Filed Aug. 25, 1922. Serial No. 584,245. 6 Claims. (Cl. 200—45.)

1. A lock for the purpose indicated having a switch arm, an operating spindle axially movable for inter-

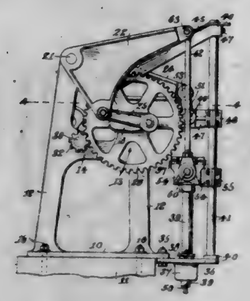
locking engagement with the switch arm, tumbler disks arranged in co-axial relation with the spindle and



actuable thereby, and a follower actuable by the spindle in the axial movement of the latter and normally impeded in its movement by the tumbler disks.

---

1,563,240. PUMP JACK. PATRICK E. TABOR, Joplin, and VOYLE V. KIRKPATRICK, Jackson County, Mo. Filed May 14, 1923. Serial No. 639,000. 2 Claims. (Cl. 74—14.)

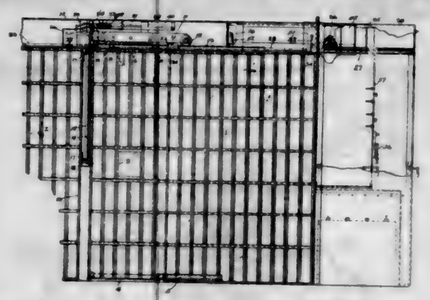


1. In an apparatus of the class described, a supporting frame including spaced side members, a shaft journalled on said frame and formed with an intermediate crank disposed between the side members of the same and co-acting crank elements externally of the frame side members, an inner beam member mounted for oscillation between the frame side members, a connecting member between the intermediate crank and the inner beam member, co-acting outer beam members mounted for oscillation on the frame members externally thereof, connecting members respectively between the external elements and the outer beam members, co-acting pump rods, connecting means between the intermediate beam member and one of said pump rods, and connecting means between the external beam members and the other of said pump rods.

---

1,563,241. DOOR OPERATING AND LOCKING MECHANISM. EARL E. TOON, Cleveland Heights, Ohio. Filed May 5, 1924. Serial No. 711,105. 18 Claims. (Cl. 189—7.)

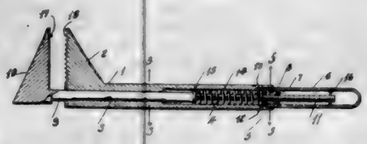
In mechanism of the character described, the combination with a slidable door; of a catch on said door; a vertically reciprocable bolt adapted normally to interlock with said catch; an electro-magnet adapted when energised to lift said bolt; and a guard operatively in-



terconnected with said door and adapted to prevent dropping of said bolt by moving beneath the same when said door is open.

---

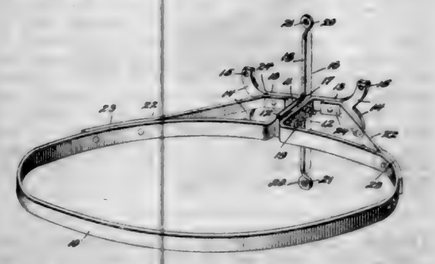
1,563,242. WRENCH. JACOB M. TWEIT, Holcombe, Wis. Filed May 27, 1924. Serial No. 716,232. 1 Claim. (Cl. 81—169.)



A wrench comprising a bar provided with a bore having circular and non-circular portions, the outer end of the circular portion of the bore being enlarged to provide a socket, a shank of non-circular formation in cross-section slidably mounted in the bore and provided at its outer end with a jaw and at its inner end with a reduced screw-threaded stem, an abutment removably secured within the socket, a spring located within the bore between the shank and abutment, a hollow handle having its inner end removably positioned in the socket in contact with the abutment, a nut threaded on the stem and located within the inner end of the handle, and a nut-receiving element carried by the handle and engaging the nut and located within the socket.

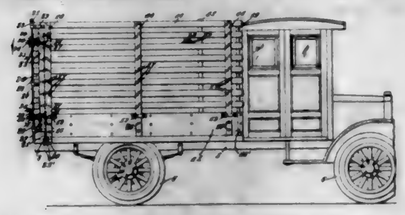
---

1,563,243. BASKET-BALL GOAL. EDWARD K. VAN GORDEN, Horseheads, N. Y. Filed Apr. 30, 1925. Serial No. 27,089. 10 Claims. (Cl. 273—1.)



1. In a basketball goal, in combination, a ring, an arm secured to said ring, a supporting foot secured to said arm, and a brace secured at one end to said ring and at the other end to said foot.

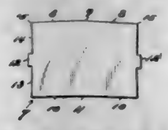
1,563,244. TRUCK BODY. HARVEY J. WEETH, Springfield, Nebr. Filed July 29, 1919. Serial No. 314,006. 1 Claim. (Cl. 296—12.)



A removable body for wagons comprising vertically spaced side members, a pair of spaced stanchion bars having their ends connected to the side members adjacent to the upper edges thereof, stationary bars held between the stanchion bars, pivoted bars cooperating with the stationary bars to provide stanchions, and said stanchions adapted to be moved with the side members.

---

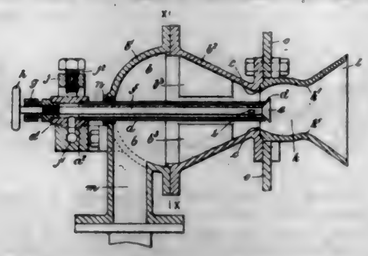
1,563,245. CORNER PIECE FOR BUILDING STRIPS. PETER P. WELTY, Pandora, Ohio. Filed June 17, 1925. Serial No. 37,736. 2 Claims. (Cl. 20—5.)



2. A corner piece for application to cover strips for a side wall, consisting of a normally flat plate with one side edge having a central maximum projection from which the adjacent side portions have an upward inclination to the ends of the piece and the opposite side edge having a maximum depression with the adjacent edge portions extending upwardly towards the end, the piece also having end edges with central substantially rectangular projections and the remaining portions of the said end edges inclining outwardly in reverse directions to and forming corner structures with the terminals of the said side edges, the corner piece being centrally bendable in reverse directions in line with the maximum projection and depression at the opposite side edges to adapt the same to inner and outer corner formations.

---

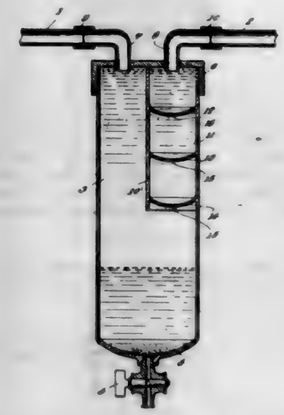
1,563,246. LIQUID-FUEL BURNER OR ATOMIZER. CORNELIS ZULVER, London, England. Filed May 26, 1924. Serial No. 715,970. 4 Claims. (Cl. 158—75.)



4. The improved oil burner or atomizer comprising the combination of an oil supply pipe, a convergent air chamber surrounding said pipe, helical vanes mounted upon the inner walls of said air chamber and adapted to rotate the air within said air chamber as it moves toward the convergent end thereof, said supply pipe at its outer end extending outwardly from the convergent end of said air chamber, a mixing chamber secured to the convergent end of said air chamber and extending outwardly therefrom, said mixing chamber being substantially larger than said convergent end of said air chamber, and a divergent deflecting cone mounted within said mixing chamber and partially extending into the outer end of said pipe, said deflecting cone being adapted to deflect the oil and air into said mixing chamber whereby to atomize the oil.

---

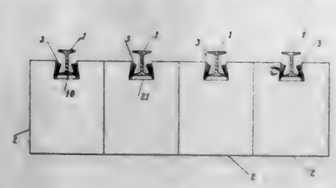
1,563,247. FILTER. HENRY BRUSO and ROLAND KRUM, St. Clair, Mich. Filed Apr. 17, 1922. Serial No. 553,373. 1 Claim. (Cl. 210—165.)



The combination with a pipe leading to a fuel supply and a pipe leading to the carburetor of an internal combustion engine, of a casing for the fuel between the pipes having a concaved lower end provided with an outlet, a stop cock controlling the outlet, a partition depending from the top of the casing and dividing one portion of said casing into a compartment, horizontally disposed concaved baffle partitions in the compartment, each having a single centrally disposed restricted opening, a removable top closing the upper portion of the casing and the compartment therein, angle pipes passing through the top, couplings connecting the angle pipes to the first mentioned pipes and one of said angle pipes communicating with the mentioned compartment.

---

1,563,248. FURNACE ARCH. CHARLES WESLEY BURROUGHS, Montreal, Quebec, Canada. Filed Dec. 24, 1924. Serial No. 757,856. 6 Claims. (Cl. 110—99.)



1. In a suspended arch furnace setting, a series of longitudinal I beams on the roof of the fire box, and rectangular fire bricks with central upwardly diminishing grooves in their upper ends and wedges to secure the I beams in the grooves.

1,563,249. WHIRLING TOY. RAFFAELE CANDIDO, Baltimore, Md. Filed Mar. 28, 1925. Serial No. 19,078. 2 Claims. (Cl. 46—46.)

1. A noise producing toy of the character described comprising a resonant shell, a screw threaded sleeve secured to one end thereof, a top for said shell and being threadedly secured to said sleeve, a diaphragm interposed between the top and the shell, said top being provided with an opening, a flexible element secured to said diaphragm and passing through said opening and the handle for receiving the opposite end of said element.

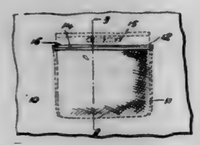
---

1,563,250. TRIGGER GUARD. FRANK J. CAPON, Camden, N. J. Filed June 24, 1925. Serial No. 39,359. 3 Claims. (Cl. 42—1.)

1. A trigger guard for fire arms, comprising a casing adapted to cover said trigger and having a finger receiving opening therein, a curved extension overlying said opening and beneath which the finger must pass in reaching said opening, and a finger actuated slide operating in said guard and normally projected in advance of the trigger, and within said extension to partly close said opening.

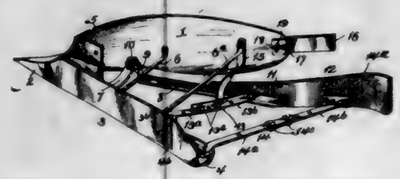
---

1,563,251. POCKET LATCH. HYMAN CHERNOFF, New York, N. Y. Filed Jan. 19, 1925. Serial No. 3,469. 1 Claim. (Cl. 292—120.)



A pocket latch comprising a pair of separable members adapted to be respectively secured to opposite walls of a pocket, a lockbar slidable within one of said members and having one end extending beyond one end of the member and provided with a manipulating portion, spaced L-shaped fingers extending from said latch bar and movable in respective slots provided in one face of said member, the other of said members having spaced slots therein for receiving the respective L-shaped fingers, and a spring carried by said first member and acting against one of said L-shaped fingers for holding all of said fingers in co-acting engagement with the end walls of said slots provided in the second member.

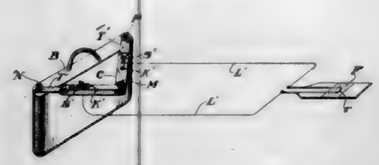
1,563,252. PLOW. CHARLES F. CARLSON, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Nov. 23, 1920. Serial No. 426,041. 11 Claims. (Cl. 97—1.)



1. An attachment for a plow base of the landside and mold board type, comprising a furrow crowding member adapted to run in the bottom of a furrow, and securing means for connecting said member with a plow base so that it will extend rearwardly of the mold board and laterally of the path of travel of the plow base, said member having a rear lateral curvature.

---

1,563,253. CONNECTER FOR FIRING EXPLOSIVE CHARGES. NELSON C. COTABISH, Cleveland, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Jan. 4, 1921. Serial No. 434,971. 7 Claims. (Cl. 200—52.)



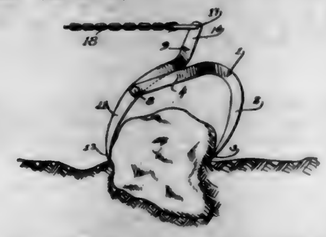
1. Electrical switch means for use in controlling electrical circuits, said switch means comprising the combination of two independently operable circuit closers, terminals severally electrically connected to said circuit closers and adapted to be secured to the binding posts or terminals of a battery, and means supporting said terminals so they are adjustable relatively to one another.

---

1,563,254. BRUSH PAN. CHARLES LOUIS CORNE, Broussard, La. Filed June 17, 1925. Serial No. 37,783. 5 Claims. (Cl. 150—37.)

1. A brush pan comprising a pan body of elongated and substantially narrow construction with a cold and a hot end, a discharge for the impurities at the cold end, and a discharge for the pure juice at the hot end of the pan, means for charging the tank at the cold end thereof, and a series of heating units in the hot end of the pan having separate controls whereby the juice is subjected to progressively decreasing ranges of temperature from the hot toward the cold end of the pan, with a cover plate located above the heating units adjacent to the hot end.

1,563,255. STONE PULLER. JAY J. COUCH, Bismarck, N. Dak. Filed Sept. 15, 1923. Serial No. 662,974. 3 Claims. (Cl. 87—2.)



1. A stone puller comprising a hook having its upper end provided with arms, a gripping jaw including a shank, the lower end thereof terminating into curved furcations, the furcations of said gripping jaw being pivotally supported intermediate their ends between the outer ends of said hook arms.

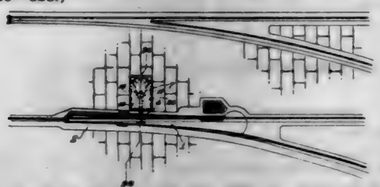
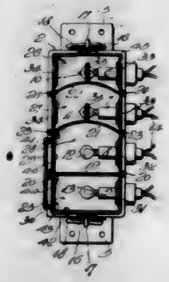
1,563,257. SWITCH BOX. FRANCIS M. CROSSLEY, Detroit, Mich; Cora Aurelia Crossley guardian of said Francis M. Crossley, incompetent person. Filed Aug. 16, 1924. Serial No. 732,442. 5 Claims. (Cl. 246—318.)



1. In a device of the class described, a switch box, switch retaining mechanism, and a plurality of ribs on the inner walls of said box, providing for the support of said mechanism in different adjusted positions in said box.

1,563,258. AUTOMOBILE SIGNAL. JOHN A. CUNNINGHAM, Bethlehem, Pa. Filed Apr. 10, 1924. Serial No. 706,555. 3 Claims. (Cl. 177—329.)



1. In a device of the class described, the combination of a signal casing, bulb sockets mounted in one end of said casing, said casing having internal guideways extending longitudinally along opposite sides, a partition plate slidably received in said guideways and dividing said casing into compartments, the side edges of said plate fitting in said guideways, said plate being transversely arched and resilient to adapt it to fit tightly against and in said guideways, and a reflecting flange projecting laterally from the convex side of said plate into one of said compartments and extending longitudinally of said plate intermediate of its side edges, said flange being of less height than the last mentioned compartment to permit said plate to flex to fit said guideways.

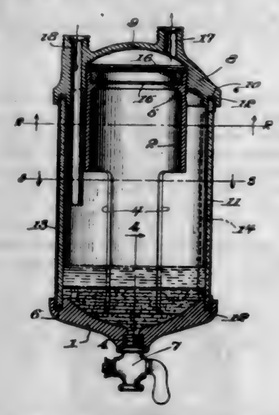
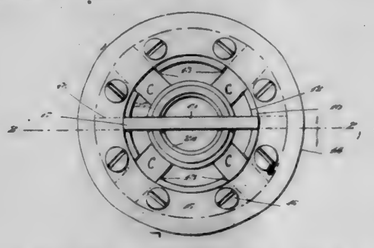
1,563,259. FILTER AND TRAP. JOHN S. CRISLER, Carson, Iowa. Filed Feb. 13, 1925. Serial No. 8,970. 1 Claim. (Cl. 210—165.)



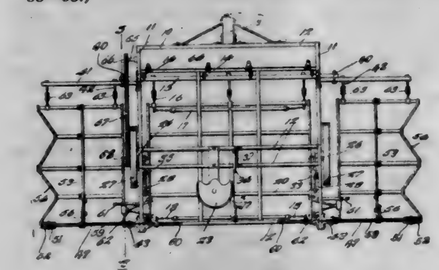
A device of the class described comprising a base having a drain opening, a cylinder connected at its lower end with the base and forming a central chamber, a second cylinder surrounding and spaced from the first and forming an outer chamber, a top member connected with the inner cylinder, and with the top end of the outer cylinder, the top member having an inlet passage therein communicating with the top of the other chamber and an outlet passage communicating with the top of the inner chamber, a screen adjacent the top of the inner chamber, the inner cylinder having elongated openings in its bottom part and a window in the outer cylinder.

1,563,260. PIPE-END TRIMMER. JOHN M. CROMLEY, Lewisburg, Pa. Filed July 12, 1924. Serial No. 725,648. 3 Claims. (Cl. 77—73.)



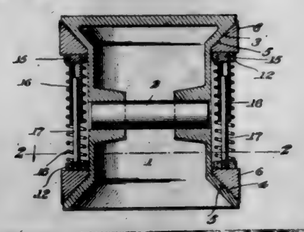
1. A pipe end trimmer comprising a cutter having terminal portions to be secured to a die head, and having a reamer portion between said terminal portions and a secondary reamer portion integral with the aforesaid reamer portion and arranged at right angles therewith, said reamer portions having converging cutting edges.

1,563,261. COMBINED HARROW AND GRASS SEEDER. SIMON PETER CURTIS, Missouri Valley, Iowa. Filed Aug. 30, 1924. Serial No. 735,209. 4 Claims. (Cl. 55—93.)



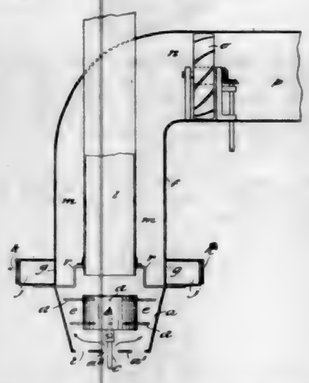
1. In a harrow, a main frame, a main harrow member suspended below said frame, ground engaging wheels for the frame, arms pivotally mounted at the sides of the main frame, means for holding said arms against pivotal movement, and side harrows flexibly suspended between said arms.

1,563,262. PISTON. ALVA M. DAVIS, Salt Creek, Wyo. Filed July 6, 1925. Serial No. 41,830. 1 Claim. (Cl. 74—108.)



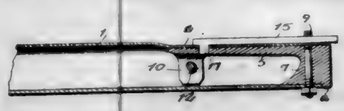
A piston having outwardly flared shoulders adjacent to the ends thereof, piston rings having inwardly flared faces for engaging said shoulders, each of said rings comprising a plurality of sections having lateral and longitudinal interengaging tongues and grooves, annular members contacting with the inner faces of the rings, each of said members comprising a plurality of sections, interengaging means between the ends of the sections, depending tubes carried by one of said rings, upstanding rods on the other member received in the tubes, and helical springs surrounding the rods and tubes and contacting said members, for the purpose set forth.

1,563,263. METHOD OF DEFIBRATING COTTON SEED AND OTHER FIBER-BEARING MATERIAL. EDWARD CARSTENSEN DE SEGUNDO, London, England. Filed Oct. 31, 1922. Serial No. 598,170. 1 Claim. (Cl. 19—46.)



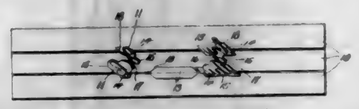
A method of defibrating cotton seed, decorticated cotton seed hulls, and other fiber-bearing material, which consists in causing the material to be treated to pass through a defibrating zone under the action of gravity and centrifugal force and causing defibration to occur during the movement of the material through such zone, the rate of movement of the material operated upon being regulated according to the degree to which it is desired to defibrate the material by varying the cross sectional area of the zone and freely discharging the defibrated material from the defibrating zone and subjecting the material operated upon to a mechanically and positively produced current of air which is caused to traverse the mass of material throughout the whole of the defibrating zone in a direction opposed to that in which the material is moving as a whole through the defibrating zone so that the fibers detached from the material throughout said zone are continuously carried away by the current of air during the defibrating action and discharged in a direction substantially opposed to the direction of motion of the mass of material through the defibrating zone.

1,563,264. SNATH FOR SCYTHES AND THE LIKE. ARCHIE M. DIAL, Washington, Ind. Filed Oct. 3, 1923. Serial No. 666,417. 1 Claim. (Cl. 56—326.5.)



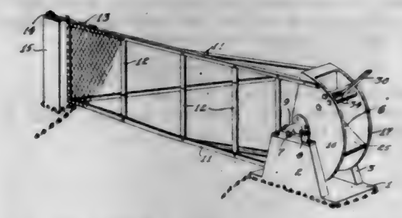
A snath of the class described provided with a tubular body flattened at one end to provide a seat having therein a slot and a plurality of apertures, and a filler block including a flat body for insertion into the flattened end of the snath, a head formed on one end of the filler block, a heel plate carried by the head arranged to engage the outer end of the snath and to project beyond said end of the snath, when the body is situated therein, said body being provided with a plurality of openings registering with the openings of the seat, and a blade engaging loop bolt passing through the slot of the seat and the body of the filler for holding the seat and filler assembled.

1,563,265. FLANGED TYPE. PAUL DIXON, Atlanta, Ga. Filed June 30, 1924. Serial No. 723,328. 3 Claims. (Cl. 101—399.)



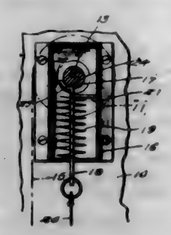
1. A printing type member adapted to simulate engraving, comprising a strip of uniform thickness returned upon itself to provide a flat double thick shank and being bent oppositely and outwardly at the inner end of the shank to provide outwardly extending flanges, a body portion secured across said flanges, and a character cut out of said body portion, said body portion being of substantially the configuration of said character.

1,563,266. GATE. ROBERT LEE DURHAM, Buena Vista, Va. Filed June 19, 1922. Serial No. 569,260. 7 Claims. (Cl. 39—60.)



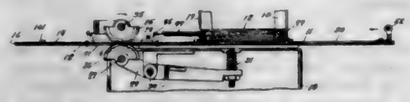
1. A gate mounted to move from closed to full open position, and automatic fluid-weight means set into operation upon movement of the gate to full open position to close the gate, said fluid weight means comprising the sole gate closing means.

1,563,267. SPRING SHADE ROLLER. AUGUST ECKMANN, New York, N. Y. Filed Sept. 18, 1924. Serial No. 738,461. 1 Claim. (Cl. 156—28.)



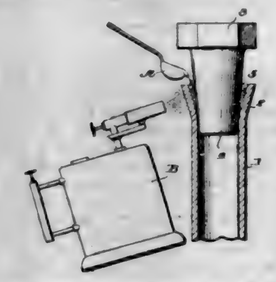
A detent device for a spring shade roller trunnion, said device comprising a casing having an opening to receive the trunnion, a detent member within the device, said member being in a single piece generally disposed midway of the casing, said detent member having lateral projections at opposite sides thereof to engage opposite sides of the casing to guide the movement of the detent member, one of said projections being higher than the other and provided with a curved bearing surface for engagement with the trunnion, said projection having a tooth at said surface to engage the trunnion notch, an expansive spring surrounding the detent member engaging the lower wall of the casing and the lowermost projection, said detent member extending through the lower wall of the casing to facilitate operation.

1,563,268. STENCIL-PRINTING MACHINE. HARMON P. ELLIOTT, Cambridge, Mass. Filed Jan. 24, 1924. Serial No. 688,298. 49 Claims. (Cl. 101—49.)



1. A stencil printing machine comprising means to advance stencils in successive order toward a printing position and means to move a selected stencil repeatedly into and out of such printing position including means to disable said stencil-advancing means.

1,563,269. PIPE JOINT AND METHOD OF MAKING THE SAME. FRANK FERGUSON, Charleston, W. Va., assignor to Emery E. Ferguson, Charleston, W. Va. Filed Mar. 25, 1924. Serial No. 701,725. 3 Claims. (Cl. 22—204.)



2. The hereindescribed method of joining a lead pipe to a pipe fitting of a different metal which comprises providing a fitting having a nipple portion of substantially the same size as the interior diameter of the lead pipe, tinning such nipple portion, expanding the end of the lead pipe for a distance less than the length of the nipple, inserting the tinned nipple portion of the fitting into such expanded end of the pipe, with the extreme end of the nipple extending into and substantially filling the bore of the unexpanded portion of pipe, and pouring molten solder into the tapering annular chamber between said nipple and expanded walls of the pipe end, while applying heat to the outside of the latter.

1,563,270. FASTENER. IKLEY C. FIFE, Chicago, Ill. Filed Jan. 18, 1924. Serial No. 687,113. 1 Claim. (Cl. 24—230.)

A fastener of the class described including an outer casing open at one end, a restricted mouth portion surrounding the open end, a second casing adapted to be

inserted through said mouth portion and having longitudinally opposed slots in the side walls thereof, a spring member having its intermediate portion formed U-shaped with its arms inclined laterally in opposite directions and inwardly projecting portions at the outer ends of the inclined portions forming oppositely disposed shoulders movable through the slots in the second casing, the ends of said spring member forming handles projecting in divergent relation from the inner ends of the shoulder portions whereby the inclined portions will engage the edges of the restricted mouth when inserting the second casing into the first casing to engage the shoulders with the inner edge of the restricted portion, said handle being compressed toward each other for releasing the shoulders.

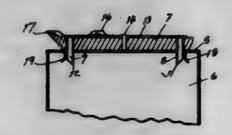
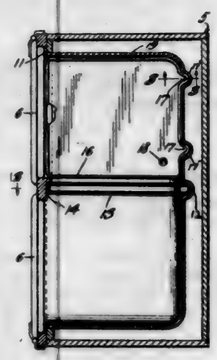
1,563,272. COMBINED MILK-CAN OPENER AND SEALER. ALBERT FONAAS, Schofield Barracks, Territory of Hawaii. Filed Aug. 5, 1924, Serial No. 730,251. Renewed Oct. 12, 1925. 1 Claim. (Cl. 221—23.)



In a device of the character described, a casting, tubes secured to said casting, said tubes having pointed ends and being capable of piercing the top of a can, a cover plate secured to said casting and adapted to overlie said tubes, means for rotating said cover plate for the purpose of exposing the ends of said tubes, said means consisting of a finger-piece formed integral with said cover plate, and a lip formed on said casting and adapted to extend beyond the outer margin of the can being operated upon and inclined upwardly so as to lie in a plane above the opening of the tubes secured thereto.

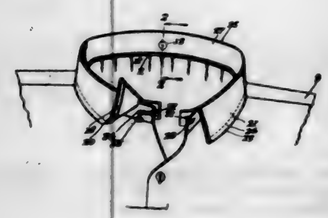
1,563,273. REFRIGERATOR LINING. HARRY C. FRATT, Norristown, Pa. Filed Feb. 13, 1925. Serial No. 9,052. 2 Claims. (Cl. 62—89.)



1. The combination with a refrigerator, of a metallic casing arranged therein and spaced from the walls of the refrigerator and provided with groove and a plurality of sockets in its rear wall, a partition arranged within the casing and having one edge received in the groove and an ice supporting pan provided with projections on its rear edge which are received in the sockets.

---

1,563,274. REVERSIBLE COLLAR. CHARLES S. FURMAN, Lansing, Mich. Filed Aug. 25, 1925. Serial No. 52,397. 5 Claims. (Cl. 2—129.)

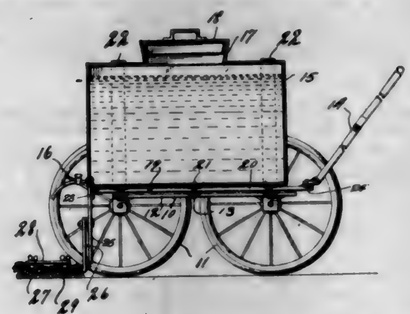


1. A reversible collar for shirts comprising a neckband, a collar section secured to said neckband, a second collar section lying substantially parallel with the first section and reversibly secured thereto to expose the first section, said second section covering the wearing surface of the first section in one position and being covered by the first section in the reversed position, and an anchoring band on the second section adapted to be secured to the collar band.

---

1,563,275. FLOOR-SCRUBBING DEVICE. ALICE J. GRABILL, Imler, Pa. Filed Mar. 28, 1925. Serial No. 19,139. 3 Claims. (Cl. 15—50.)

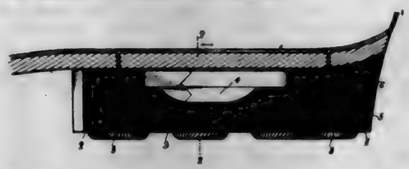
1. A scrubbing device of the character described comprising a wheeled supporting frame, a tank detachably mounted upon the frame, a handle whereby the supporting frame may be shifted, depending members mounted upon the forward end of the frame, a mop support adjustably mounted upon said depending members for vertical adjustment, the mop support comprising a lower



frame, and an upper frame clamped upon the lower frame and a mop engaged between said last named frames.

---

1,563,276. HEEL FOR BOOTS AND SHOES. JAMES E. GROSJEAN, Lima, Ohio. Filed Dec. 7, 1921. Serial No. 520,557. 1 Claim. (Cl. 36—35.)



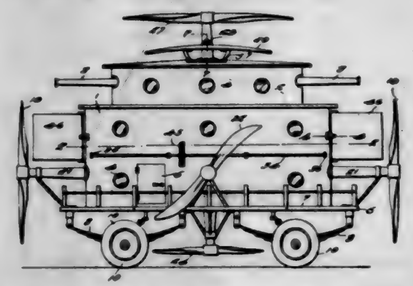
A heel for boots and shoes comprising a body composed of a breast of rigid material and a rear tread part of soft yielding material, and a connecting member composed of a plurality of plies of fabrics and interposed layers of rubber extending substantially parallel to the tread of the heel, the adjacent edges of said breast and rear part of the heel being vulcanized together, and the connecting member extending across the joint thus formed between the breast and rear part of the heel and vulcanized to the breast and rear part of the heel, the connecting member thereby tying together the breast and rear part of the heel and strengthening the joint formed between them.

---

1,563,277. ATTACHMENT FOR PENCILS. CLIFFORD M. HADDOX, Charleston, W. Va. Filed Jan. 7, 1924. Serial No. 684,842. 2 Claims. (Cl. 120—84.)

1. A pen retaining attachment for pencils comprising a singe tubular member provided with a slit extending longitudinally thereof from one of its ends nearly to but short of the other end thereof, said tubular member being made of a material possessing inherent resiliency and being adapted to have the slitted end portion slipped over the end of a pencil and the butt end of a pen inserted between the unslitted portion of the tubular member and the end of the pencil, said unslitted portion of the tubular member being adapted on further inward movement thereof on the pencil to clamp the butt portion of the pen securely against the pencil.

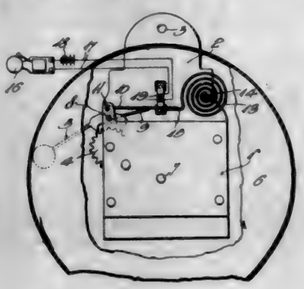
1,563,278. AEROPLANE. WILLIAM HALE, Litwar, W. Va. Filed Apr. 7, 1925. Serial No. 21,397. 3 Claims. (Cl. 244—15.)



1. An aircraft of the class described comprising a body, running gears for the same, a propeller at each end of the body, an engine for each propeller, steering mechanism at each end of the device and connected with the wheels of the running gears, means for locking the steering mechanism not being used and means for causing the vehicle to rise and descend.

---

1,563,279. FIRE ALARM. FRANK P. HARTLEY, Bangor, Me. Filed May 19, 1924. Serial No. 714,435. 2 Claims. (Cl. 116—102.)



2. An alarm comprising a gong, a pivoted clapper cooperable with said gong, a spring motor for actuating said clapper, said motor having a projecting back plate, a spring arm mounted on said motor and normally engaging said clapper to hold the latter against operation, a post extending rigidly from the projecting portion of said back plate adjacent the free end of said spring arm, and a spiral thermostat anchored at its inner end to said post, the outer end of said thermostat being bent laterally outward and engaging the free end of said spring arm, whereby to automatically release the latter upon a predetermined rise in temperature.

1,563,280. SURGICAL AND DENTAL APPLIANCE. GEORGE FRANKLIN JACKSON and FRED EARNEST CAMPBELL, Litle Rock, Ark. Filed May 15, 1925. Serial No. 30,582. 1 Claim. (Cl. 230—13.)

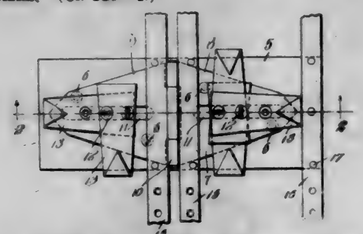
A vessel having a removable cap, an exhaust duct mounted on the cap and in communication with the interior of the vessel, a compressed air admission duct mounted on the cap and extended into the vessel, a U-shaped nozzle duct mounted on said admission duct extending transversely beneath the cap within the vessel and terminating in a discharge orifice, said exhaust duct having a bell mouth into which the discharge orifice end of said nozzle extends, and a third duct carried by the

cap and extending into the vessel and terminating above said nozzle for delivering material into the vessel by

suction produced through reduction of air pressure within the vessel substantially as shown and for the purposes described.

---

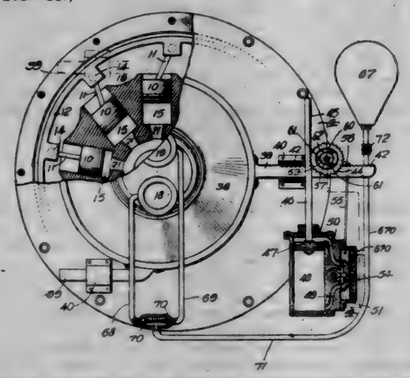
1,563,281. CORN HUSKER. LEVI JARVIS, Cedar Rapids, Nebr. Filed Jan. 26, 1924. Serial No. 688,738. 1 Claim. (Cl. 130—4.)



In a device of the character described a supporting strap, a supporting body having a longitudinally disposed slot secured to the strap, a plurality of hook members, each of said hook members having an elongated opening, securing members adapted to pass through the slot of the body portion and elongated openings of the hook members to secure the hook members to the body, whereby the hook members may be held in transverse relation to each other or in transverse or aligned relation.

---

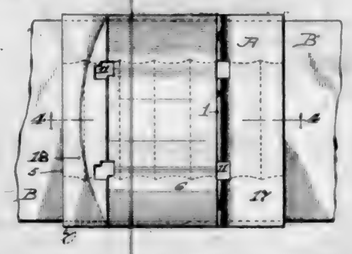
1,563,282. HYDRAULIC MOTOR, PUMP, AND THE LIKE. GEORGE CARR JESSUP, Camden, N. J. Filed Oct. 9, 1923. Serial No. 667,538. 7 Claims. (Cl. 103—38.)



7. In an apparatus of the kind described, comprising coacting pistons and cylinder members arranged in a circular series, a shiftable support for one set of members of the series, a fluid pressure device adapted to act on said support and comprising a piston and a cylinder, a valve to control the supply of fluid pressure to such cylinder, a manually operated valve shifting means for opening communication with said cylinder and a source of supply of fluid pressure, and automatic valve shifting means to cut off such supply.

---

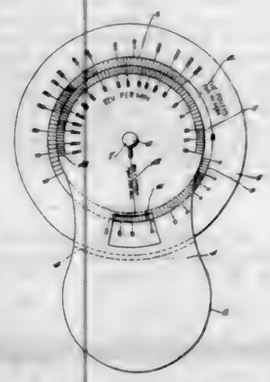
1,563,283. TIE PLATE. JULIUS KRUTTSCHNITT, New Canaan, Conn., and EDWIN H. BELL, Chicago, Ill.; E. Minna Kruttschnitt executrix of said Julius Kruttschnitt, deceased. Filed June 1, 1925. Serial No. 34,028. 9 Claims. (Cl. 238—298.)



2. A tie plate having tie embracing, side flanges depending from its bottom and extending lengthwise of the plate, the bottom of the tie plate adjacent said flanges being flat, and a configurated surface intermediate said spaced-apart flat portions and extending above the horizontal plane thereof.

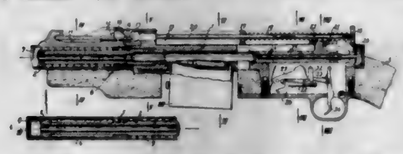
---

1,563,284. COUNTER FOR PULLEYS. GERHARD LAURIN, Evanston, Ill. Filed Feb. 8, 1924. Serial No. 691,452. 1 Claim. (Cl. 235—84.)



A counter for pulleys including an elongated body having spaced arcuate end portions, one of said end portions forming a handle and the other end portion being split longitudinally to form a receiving recess, a counter disc in said recess, a pin traversing the center of the arcuate ends and the disc for rotatably mounting the disc, one of said end portions having a series of graduations extending inwardly from its edge, graduations on the disc cooperating with the graduations on the arcuate end portions, a second set of graduations on the disc opposite the first set of said body having a side opening to display the second set of graduations on the disc at a point centrally of the body.

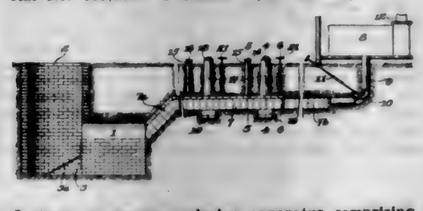
1,563,285. FIREARM. JOSEF NETSCH, Pruske, Czechoslovakia. Filed May 21, 1923. Serial No. 640,570. 5 Claims. (Cl. 42—8.)



1. In a fire arm, the combination with a gun barrel and a breech bolt movable into and out of closing position, of a sleeve surrounding the barrel and movable forwardly under the action of the gases of combustion, spring means for returning the sleeve to a normal position of rest, spring means acting upon the breech bolt to move it from an open to closed position, a coupling between the said sleeve and the breech bolt, including a part movable with the former, a part movable with the latter, said two parts including means operative at the end of the forward motion of the sleeve to interconnect the said two parts, and means operative near the end of the return motion of the sleeve to make the means interconnecting the said two parts ineffective.

---

1,563,286. VAPOR APPARATUS. WALTER N. NORWOOD, Los Angeles, Calif. Filed May 14, 1923. Serial No. 639,032. 4 Claims. (Cl. 167—8.)



2. A gas or vapor producing apparatus comprising a plurality of generators, a receptacle for each generator, underground flues connecting each generator and receptacle, said flues being porous for communication with the surrounding soil to extract moisture and medicinal substances therefrom and means whereby the flow of gas or vapor through the flues may be controlled to direct said gas or vapor from either of the generators to either of the receptacles.

---

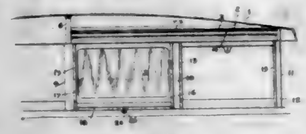
1,563,287. AUTOMOBILE TOP. AUGUST H. PAPE, Kentfield, Calif. Filed Feb. 16, 1921. Serial No. 445,326. 2 Claims. (Cl. 296—47.)

1. In combination with an automobile body and top therefor, a stationary window track mounted upon each side of the top and extending the full length thereof, other stationary window tracks to one side of the first-named track, a front window slidable upon the first-named track and movable thereon from one end thereof to the other end thereof, a rear window and means of connection between the rear window and said tracks including a stationary switch member for causing said rear window to be moved onto the said second named tracks when moved from extended to out-of-the way position.

2. In combination with an automobile body and a top therefor, a track support mounted upon said top, tracks carried by said support, windows, bars extending along the upper side of said windows, means of sliding connection between said bars and windows, shoes carried by said bars and being slidable upon said tracks, and means carried upon the upper edges of the body for engagement with the under side of the windows so as to lift said windows upwardly when the latter are moved into extended positions.

---

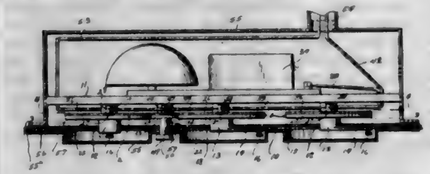
1,563,288. AUTOMOBILE SIDE CURTAIN. AUGUST H. PAPE, Kentfield, Calif. Filed May 17, 1921. Serial No. 470,252. 1 Claim. (Cl. 296—140.)



The combination with a top and body of an automobile, a flexible side curtain, guide tubes associated with the top and body and having longitudinal slots therein of less width than the inside diameter of the tubes, said tubes being curved upwardly and inwardly at their upper ends to follow the usual curvature of the top, flexible strips secured to and extending along opposite edges of the curtain and slidably mounted within said slots, said strips having spaced perforations therein, helically coiled flexible members slidable in the tubes and having convolutions thereof extended thru the perforations, and a plurality of rods mounted in the tubes which rods extend freely through said coiled flexible members and are curved to correspond to the curve of said tubes.

---

1,563,289. IGNITION-CIRCUIT SWITCH. RUSSELL H. PARKER, Benton County, Oreg. Filed Nov. 5, 1923. Serial No. 672,922. 3 Claims. (Cl. 200—43.)



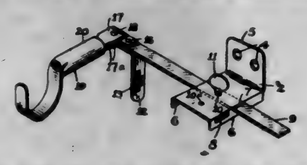
1. A switch including an insulating base, a pair of series of spaced electrically connected contacts carried by the base, a third series of contacts carried by the base, alternate contacts of the third series being electrically connected with one another, the third series of contacts and one of the first named series of contacts each having a contact thereof adapted for connection with a translating device and a plurality of rotatable insulating disks associated with the base, said disks having means whereby any of said disks in all but one position thereof completes a connection between said pair of series of electrically connected contacts, certain of said disks further including a part which in such position of the disks electrically connects unconnected pairs of contacts of the last named series of contacts, a further disk including a part which in the last named position of the disk electrically connects the other of said pair of series of electrically connected contacts with one of the third series of contacts.

---

1,563,290. COMBINATION SHADE BRACKET. ARTHUR EDWIN PHIPPS, Philadelphia, Pa. Filed Aug. 26, 1922. Serial No. 584,589. 1 Claim. (Cl. 156—24.)

A combination shade bracket comprising an attaching member having a horizontally extending body portion, depending flanges along the side edges of said

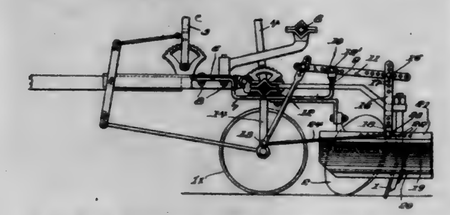
body portion, said flanges provided with a plurality of pairs of aligning openings, and a carrying bar adjustable through an aligning pair of said openings and



movable from one pair of openings into the other to regulate the distance outwardly from the wall to which the bracket is attached.

---

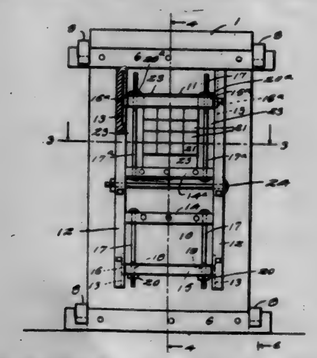
1,563,291. LISTER-CULTIVATOR SHIELD ATTACHMENT. ALFRED RASMUSSEN, Plainview, Nebr., assignor of one-half to Saburo Shindo, Grand Island, Nebr. Filed Oct. 29, 1924. Serial No. 746,590. 4 Claims. (Cl. 97—188.)



1. A lister cultivator having a frame and lister disks and swinging portions carrying the disks and also having means for adjusting and adjustably fixing said swinging portions, in combination with a support connected to said frame, a longitudinal vertically swinging lever fulcrumed at an intermediate point of its length on said support, means connected to and extending between the said swinging portions and the forward arm of the said lever, a hanger connected to the rear arm of said lever, a shield connected to and suspended by said hanger, and means extending between and connecting the connected shield and hanger and the said swinging portions of the cultivator.

---

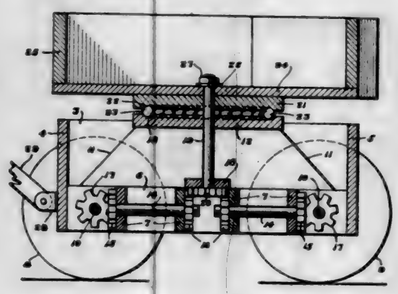
1,563,292. CONCRETE-MONUMENT MOLD. BURBON D. RAWLS, Shreveport, La. Filed June 2, 1925. Serial No. 34,452. 2 Claims. (Cl. 25—123.)



1. A mold having one of the walls thereof provided with a type receiving opening, guides fixed to said wall, a bar fixed to said wall between said guides, a second bar slidably arranged in said guides, and adjusting means carried by said bars, said guides, bars, and means constituting a type clamp.

---

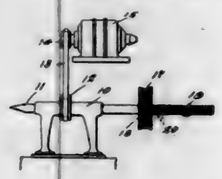
1,563,293. TOY. BIAGGIO SANTANGELO, Norristown, Pa. Filed Apr. 12, 1922. Serial No. 551,771. 1 Claim. (Cl. 46—48.)



A wheeled toy comprising a running gear structure including a rectangular frame and a pair of longitudinally extending parallel braces spaced equi-distant from the center of the frames, a plurality of cross braces connecting said longitudinally extending braces, driving shafts carried by said cross braces, driving axles carried by said frame and said longitudinally extending braces and having geared connection with said driving shafts, a vehicle shaft having geared connection with said driving shafts, a platform supported from said frame, a turntable, said platform and turntable provided with ball races, and bearing balls in said races to permit free rotation of the turntable upon the platform.

---

1,563,294. FACING APPARATUS. ALVIN SATTEL, Johnstown, Pa. Filed Feb. 27, 1922. Serial No. 539,601. Renewed Sept. 4, 1925. 1 Claim. (Cl. 90—18.)



A facing apparatus of the character described comprising a lathe including a power driven spindle having one end threaded, in combination with a disk having a central threaded hole adapted to be screwed upon said threaded end of the spindle with the spindle projecting beyond the disk, the disk having a periphery formed as a file, and an elongated facing member likewise having a file formation and provided in one end with a threaded socket adapted to be engaged upon said threaded end of the spindle subsequent to the engagement of the disk thereon.

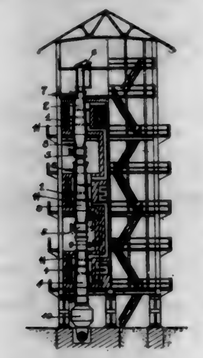
1,563,295. MANUFACTURING DECOLORIZING CARBON. JOHAN NICOLAAS ADOLF SAUER, Amsterdam, Netherlands. Filed Feb. 27, 1920. Serial No. 361,742. 7 Claims. (Cl. 252—3.)

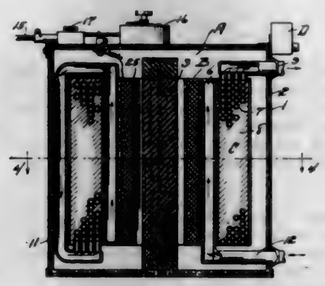
1. The process for the manufacture of decolorizing carbon, which consists in subjecting carbonaceous material in a practically continuous manner to at least two successive operations one of which includes a carbonizing stage during which the material is treated, under the application of heat, with activating gases, such ac-



tivating gases being introduced and withdrawn continuously, and the treatment being continued without interruption until completed.

---

1,563,296. WATER HEATER. DONALD S. SCARBOROUGH, St. Louis, Mo. Filed Feb. 27, 1925. Serial No. 12,090. 3 Claims. (Cl. 219—47.)

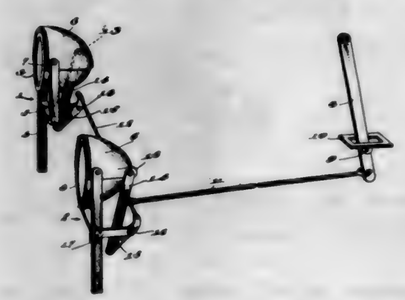


3. A heater of the class described comprising a casing, a laminated core therein, a primary coil carried by the core, a secondary coil composed of a plurality of coils of tubing embedded in metal having resisting qualities to the passage of a current, a chamber placed between the primary and secondary coils, means for connecting one end of the chamber to a source of supply, means for connecting the other end of the chamber to the lower ends of the tubing, a delivery pipe connected with the other ends of the tubing, a valve in said pipe, conductors connecting the primary coil with a source of alternating current, a switch in the circuit, means for opening the switch when the valve is opened and for closing the switch when the valve is closed and a rheostat and fuses placed in the circuit.

---

1,563,297. MECHANICAL GLARE DARKENER FOR AUTOMOBILE HEADLIGHTS. THEODORE J. SHONLEY, Mount Ayr, Iowa. Filed Jan. 17, 1925. Serial No. 3,150. 2 Claims. (Cl. 246—45.)

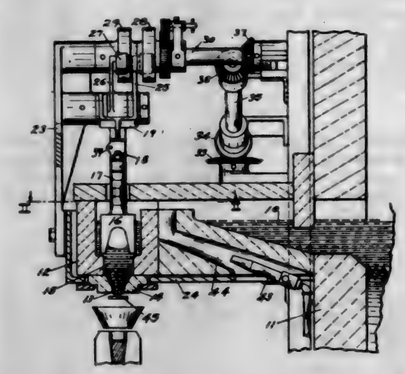
1. A glare darkener for headlights comprising a bracket having bar portions extending upwardly at the sides of a headlight, a shutter rockably mounted upon said bar portions and normally partially fitting around the headlight, an extension carried by the bracket, articulated means for moving the shutter including a crank pivoted upon the extension and a link reaching to the



shutter, means including an ear on the shutter with which said link is connected and by which the shutter is rocked upon said bar portions, and actuating means for said articulated connection including a lever and a rod.

---

1,563,298. APPARATUS FOR FEEDING MOLTEN GLASS. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed May 17, 1923. Serial No. 639,607. 11 Claims. (Cl. 49—55.)



2. A glass feeder comprising, in combination, a receptacle to contain molten glass and provided with a discharge orifice, and means controlling the discharge of glass through said orifice comprising mechanical members within the glass adjacent to the orifice, and automatic means for periodically moving said members toward and from each other in a direction transverse to the direction of movement of glass through the orifice, said members when moved toward each other serving to substantially cut off the flow toward said orifice.

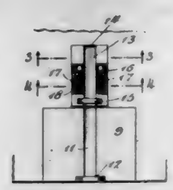
1,563,309. TAPE-FEEDING ATTACHMENT FOR SEWING MACHINES. ROBERT W. HARDIE, Fanwood, N. J., assignor to Louis M. Rabinowitz, New York, N. Y. Filed July 13, 1925. Serial No. 43,309. 2 Claims. (Cl. 112—136.)



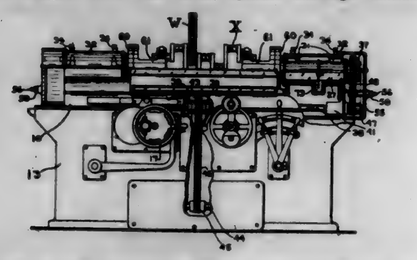
1. In a two needle sewing machine having a feed plate provided with serrated surfaces having apertures formed therein, and feed dogs engaging said apertures, means for guiding the lateral margins of a fastener bearing tape over said serrated surfaces and feed dogs, consisting of an unobstructed uncovered groove extending longitudinally of said feed plate, intermediate said serrated surfaces, of sufficient depth to permit the unobstructed passage therethrough of fasteners secured to said tape, and having side walls adapted to guide said fasteners through said groove, and a slidable front plate provided with a groove corresponding with the groove of said feed plate and in line therewith, said front plate provided with bearing surfaces to support the lateral margins of a tape on opposite sides of said groove in the plane of, and in line with, the serrated surfaces of the feed plate.

---

1,563,310. CYLINDRICAL-GRINDING MACHINE. CHARLES H. NORTON, Plainville, Conn., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1921. Serial No. 441,047. Renewed Oct. 16, 1924. 25 Claims. (Cl. 51—108.)

1. A double head grinding machine comprising a base having parallel ways thereon, a slidable work table

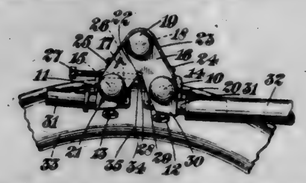
having ways mating with the base ways, work head members integral with said table, spindle bearings thereon



having bearing surfaces in precise axial alignment, and work-supporting spindles mounted on said surfaces and aligned thereby.

---

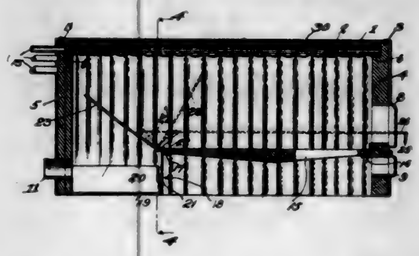
1,563,311. TOOL FOR MANIPULATING SPLIT TIRE-RETAINING RIMS OF VEHICLE WHEELS. WALTER HENRY WELCH, Bristol, England. Filed Feb. 13, 1925. Serial No. 9,004. 5 Claims. (Cl. 157—1.)



1. In a tool for manipulating split rims of vehicle wheels, the combination of two rim-gripping devices adapted to be secured to the rim, one on each side of the split therein, a projection on each of said devices extending away from the plane of the rim, two links pivotally engaged end to end with one another and at their other ends each rotatably engaged with one of said projections, and adjustable means preventing relative rotation between the links in one direction.

---

1,563,312. TOBACCO-DRYING APPARATUS. JOHN BIRT MUSE, Cameron, N. C. Filed Jan. 25, 1924. Serial No. 688,508. 5 Claims. (Cl. 126—104.)



1. In an apparatus of the class described, the combination with an inner and an outer casing, of a grate within said inner casing, supporting means for the forward end of the grate, a support for the rear end of the grate, a damper plate positioned in the inner casing and having a pivot rod journalled in the side walls of the inner casing, said pivot rod being positioned contiguous to the support for the rear end of said grate and preventing movement of the supoprt out of engagement with the grate, a crank arm between said inner and outer casings and fixedly connected to said damper plate, and an operating rod extending beyond the outer face of said inner and outer casings and positioned also between the same and connected at its inner end to said crank arm.

INVENTION—MECHANICAL SKILL—MODIFICATION OF MARBLE-GRINDING MACHINE TO PRODUCE MACHINE FOR FINE GRINDING OF SMALL METAL ROLLERS.

**The modification of a machine for polishing a cylindrical piece of marble in order to produce appellant's machine for finer or lighter grinding of rollers for antifriction bearings after they are hardened and ground to true shape would involve ordinary mechanical skill where machines for the latter purpose are old and the parts of the marble grinding machine need no modification in mode of operation in order to polish small metal rollers and they function to produce the same movements as those obtained with appellant's machine, although the marble-grinding machine is much larger and the marble would be turned more slowly than appellant's small bearing roller.**

NOTE.—This application has resulted in Patent No. 1,531,043, March 24, 1925.

Application for patent.

APPEAL from the Examiners in Chief.

PROCESS AND APPARATUS FOR LAPPING ROLLERS.

Application filed May 29, 1922, Ser. No. 564,394.

*Messrs. Carr & Carr* for the applicant.

KINNAN, *First Assistant Commissioner:*

This case comes on for review by appeal of the decision of the Examiners in Chief affirming that of the Primary Examiner denying patentability to claims 1 to 7, inclusive, of which claim 1 will serve for illustrative purposes.

**1. A roll lapping machine for lapping rolls for roller bearings comprising means for rotating a roll about its axis, a lap of greater length than such roll, means for forcing said lap transversely against said roll, and means whereby said lap is adapted to adjust its bearing face automatically to the surface of the roll.**

The references are Scoville, 382,909, May 15, 1888; Calahan, 1,025,859, May 7, 1912; Friess, 1,227,775, May 29, 1917; Smith, 1,122,433, December 29, 1914; Buckwalter, 1,373,051, March 29, 1921; Wesson, 1,423,378, July 18, 1922.

The claims are directed to what is known in the art as a roll-lapping machine. While all of the claims are not so restricted to, yet the machine is primarily designed for lapping rollers for antifriction roller bearings. In perfecting the rollers, especially for antifriction bearings, these rollers are hardened and then ground to true shape; but in order to bring them to the high degree of perfection required for quiet-running bearings they are submitted to a finishing operation, and this is the operation performed by the apparatus set forth in the appealed claims. The roller to be lapped is rotated at a high speed while the lap is brought against it with the desired pressure and is reciprocated longitudinally of the roller to insure even polishing. The lap is pivoted for slight lateral swinging, so as to automatically accommodate the surface of the roller. The lap is preferably formed with a series of grooves disposed at right angles to each other to form pockets for receiving an abrasive material. This form of lap may be omitted, and a copper or other soft material lap may be substituted and the grooves eliminated.

As well stated by the Examiner and as entirely supported by the specification, the term "lapping" merely means a form of grinding of a finer or lighter character similar to that practiced in cutting or polishing precious stones. Appellant in his brief on appeal has sought to give a special meaning to the term "lapping" and has also contended that in the operation of his machine the high particles of the roller are pressed or flowed plastically in order to fill up the microscopic pits and press down the projecting points. It is very clear the original specification furnishes no basis for this contention, nor is there anything in the original disclosure which supports the view that appellant had in operation and in mind more than that which is originally understood to be defined in the Examiner's statement.

The prior art discloses several machines for finishing bearing rollers. Such machines are disclosed by Smith, Buckwalter, and Wesson. The other references disclose machines for grinding cylinders, and it is evident the modification of them required to grind the particular shape of roller which appellant seeks to lap would involve most ordinary mechanical skill. The most pertinent reference is that of the Scoville patent. This machine employs metal bricks to polish a cylindrical piece of marble. The statement in appellant's brief that the marble turns slowly is not borne out by the patentee's specification; but admittedly the marble would be turned more slowly than appellant's small bearing roller. The operation of the machine has been discussed by the tribunals below and by appellant in his brief. The construction is simple, and the parts function to produce the same movements obtained with appellant's machine. The construction is much larger; but of course it could be made smaller, and the various parts would need no modification in mode of operation in order to polish or lap small metal rollers. Perhaps in the absence of other machines for working upon small cylindrical shapes the modification of Scoville's machine would not be so obvious; but with the present state of the grinding polishing art there is ample suggestion for making the Scoville apparatus smaller, adapted to run the work at a higher speed and perform the functions obtained with appellant's machine. Whether or not appellant originally disclosed the lap of

greater width than the length of the roller there is no invention in such feature. It involved only good judgment to make the lap wide enough for the work to be lapped. After a most careful review of the claims and the holding of the Examiner I am satisfied his conclusion is sound.

The decision of the Examiners in Chief is affirmed.

TRADE-MARKS—ACQUIESCENCE IN DENIAL OF REGISTRATION UNDER ACT OF 1905 AND ACCEPTANCE OF REGISTRATION UNDER ACT OF 1920—ELECTION—ESTOPPEL.

Where the applicant, prior to the passage of the Trade-Mark Act of March 19, 1920, applied for registration of a mark under the 1905 act, and then, registration being denied because the mark was held descriptive, applicant sought and finally obtained registration under the act of 1920, *Held* that by accepting registration under the 1920 act instead of appealing, the applicant should be held bound by its election, and delay of over four years in seeking to cancel the registration under the act of 1920 and renew the application under the 1905 act constituted such laches as amounted to estoppel.

APPLICATION for registration of trade-mark.

ON APPEAL.

TRADE-MARK FOR LIGHT MOTOR TRUCKS.

Application filed September 5, 1924, Ser. No. 202,263.

*Mr. Elliott J. Stoddard* for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiner of Trade-Marks denying registration of the notation "Speed Wagon" used on light motor trucks. The mark was refused registration on the ground that is was descriptive of the goods.

The records disclose that this applicant, prior to the passage of the Trade-Mark Act of March 19, 1920, applied for registration of this same mark under the 1905 act and that registration being denied under the latter act because the mark was held descriptive, the registration was then sought and finally obtained under the act of March 19, 1920. After more than four years, during which time applicant availed itself of its rights under the registration it had obtained, it seeks to cancel such registration and renew its application for registration under the 1905 act. The 1920 act, section 1 (*b*), states that the Commissioner shall keep a register of "all other marks not registrable under the act of February 20, 1905, as amended." It is apparent, therefore, that by accepting registration under the 1920 act, instead of appealing, if applicant believed there was error in the decision of the Examiner of Trade-Marks that registration under the 1905 act should not be granted, the applicant should be held bound by its election. The long delay of over four years in seeking registration under the 1905 act constitutes such laches as amount to an estoppel.

As to the merits of the question whether the trade-mark is descriptive, it is noted that in the opposition proceeding, *Reo Motor Car Co.* v. *Traffic Motor Corporation*, decided by me December 4, 1923; 14 T. M. Rep. 34, the decision being affirmed by the court of appeals, March 2, 1925, 338 O. G. 1, I held the term "Speed Wagon" was descriptive as applied to trucks. Applicant contends that the question raised in that opposition was not the same as that presented here on appeal, and in such contention it is undoubtedly correct. It is believed, however, that the interpretation put upon the terms constituting the mark by the public is correctly indicated by the witness Triphagen, who was called as a witness for the opposer, the applicant here, in the opposition, and testified that the mark means "a speedy truck, the truck that will deliver goods faster."

I have not overlooked the very able and ingenious argument giving the various meanings that may be attributed to the word "speed"; but I am constrained to the view that to the average purchaser the word as applied to a motor truck means a speedy truck.

Appellant has pressed the view that the words truck, wagon, bus, carriage, etc., which were used in the days of horse-drawn vehicles, have not all persisted in the transition to motor-driven vehicles; that while the names "bus" and "truck" have been carried forward from the old horse-drawn-vehicle art to the later motor-vehicle art, the name "wagon" has not been so perpetuated. In consequence such word is not descriptive of a motor truck, and the notation speed wagon is also not descriptive of such a vehicle. It would seem the test lies in what the public would understand by the notation. It is believed a fair conclusion such notation applied to a light motor truck would be understood to mean a speedy truck, one that would quickly transport goods from one place to another. The term "wagon" has been, it must be held, frequently applied to motor vehicles in the loose careless way the public refers to these vehicles. These have been styled power wagons, gasoline wagons, etc. The terms truck and wagon are fairly interchangeable as applied to motor vehicles, although they are much more frequently, it is true, termed "trucks". It must be held appellant's mark, appearing on a light motor truck, would be understood by the public to describe the quality or characteristic of the vehicle. In the case *In re Central Consumers Company*, 140 O. G. 1211; 1909 C. D. 329: 32 App. D. C. 523, the cort held:

> It was evidently the intention of Congress, placing these restrictions in the Trade Mark Act, to prohibit anyone from acquiring a property right, protected by law in its exclusive use, in a name possessing any inherent signification that would, of itself, enhance the sale or value of the article or articles to which it may be applied.

It seems clear enough the prospective purchaser of one of the applicant's products would ascribe to the notation "Speed Wagon" a signification that would enhance the value of the product.

Even if applicant's contention as to the nondescriptive character of the words constituting the mark be accepted it is believed to be estopped, as above indicated, by reason of its acquiescence, without exercising the right of appeal, for four years in the view of the Examiner that the mark was descriptive and not registrable under the 1905 act. *Ex parte Pitney-Bowes Postage Meter Co.*, 146 MS. D. 149 [affirmed by Court of Appeals D. C. June 1, 1925, 338 O. G. 5].

The decision of the Examiner of Trade-Marks denying registration is affirmed.

WINKELMANN *v.* LESSER.

*Decided June 14, 1924.*

1. INTERFERENCE—PRIORITY—REDUCTION TO PRACTICE—ORIGINALITY.

Where a device embodying the invention in issue was completed and successfully tested by W., the junior party, prior to L.'s filing date, W. is entitled to the award of priority in the absence of proof by L. either that he was in possession of the invention before W. reduced it to practice or that he disclosed it to W.

2. SAME—ORIGINALITY—DISCLOSURE—EVIDENCE OF—TESTIMONY.

Where B., L.'s witness, testifies that he accompanied L. at the time L. conferred with W. and he saw L. make a sketch in his conference with W., but he did not hear what was said, and it does not appear that the sketch showed the invention in issue or what it showed, *Held* that B.'s testimony is of value only in establishing the fact of the conference.

3. SAME—TESTIMONY—CREDIBILITY OF.

It is not strange that W., an employee of the Singer Sewing Machine Co., constructed the model of an improvement in sewing-machine attachments at home, his company having taken no orders for the device and W. not having been authorized to spend any of the company's time on it.

4. SAME—ORIGINALITY—COMPLETION OF DEVICE BY W. SOON AFTER CONFERENCE WITH L.

The development of the complete device by W. within a few days after L.'s first conference with W. may be taken as indicative that W. had previously given thought to the matter, although if L. actually disclosed the invention in its perfected form to W. the latter probably would have been able to make the device in this short time.

5. SAME—SAME—REDUCTION TO PRACTICE—ALLEGED DISCLOSURE TO INTERFERING PARTY.

Where W., the junior party, at the instigation of L. completed and successfully tested a device embodying the invention in issue prior to L.'s filing date, and there was no evidence of possession of the invention by L. before W. reduced it to practice and no evidence of disclosure of the invention by L. prior to his alleged but uncorroborated disclosure to W., and where L.'s disclosure on the witness stand of what he invented fell far short of the information possessed by W. before their conference, *Held* that L. failed to establish that he disclosed the invention to W., and priority was awarded to W.

Note.—The application of W. has resulted in Patent No. 1,529,103, March 10, 1925.

APPEAL from the Examiners in Chief.

FOLDERS FOR CIRCULAR WORK.

Application of Charles Winkelmann filed December 2, 1919, Serial No. 341,957.

Application of Donald Lesser filed August 27, 1919, Serial No. 320,138.

*Mr. Henry J. Miller* for Winkelmann.

*Mr. Charles G. Hensley* for Lesser.

FENNING, *Assistant Commissioner:*

This is an appeal by the junior party, Winkelmann, from the decision of the Examiners in Chief affirming the decision of the Examiner of Interferences awarding priority of invention to the senior party, Lesser.

The invention relates to attachments for sewing machines and its set forth in 12 counts, of which the following are illustrative:

> 1. The combination with a sewing machine throat-plate having a needle-hole and a depression in front of said needle-hole, of a folding attachment comprising a plate provided with a scroll-section substantially U-shaped in cross-section and placed on its side in said depression, a guide-plate having a curved edge extending between the legs of the scroll section and spaced therefrom, and edge-guiding means on the lower side of the guide-plate adjacent the curved edge thereof.
>
> 12. A sewing machine comprising stitching means including an apertured needle plate, a sewing needle operating in said aperture, said needle plate having an aperture for the feed dog arranged near the needle aperture, a feed dog movable therein, a fabric plate having an outwardly arched curved edge leading toward and terminating just in advance of the needle aperture of the needle plate, on which fabric plate fabric is adapted to rest and to be turned with the edge of the fabric extending over said curved edge, a folder arranged to guide the edge of the fabric around said curved edge, and a presser foot near said needle, having a claw extending inside the arc of the curved edge of said fabric plate.

This is a case of originality, each party relying on the same work. The testimony of both parties establishes, as held below, that the device was made by Winkelmann, an employee of the Singer Mfg. Co., at the instigation of Lesser, an official of the Automatic Lace and Embroidery Co., to enable the latter company to fold and sew in one operation the edges of circular chevrons, which said latter company had contracted to supply to the Government.

[1] The device was both completed and successfully tested by Winkelmann prior to Lesser's filing date, and therefore, in the absence of any proof by Lesser either that he was in possession of the invention before Winkelmann reduced it to practice or that he disclosed it to Winkelmann, the latter is entitled to the award.

[2] Lesser has furnished no evidence of such prior possession. He has not attempted to prove any disclosure of the invention prior to his alleged disclosure to Winkelmann, and he is not corroborated in this alleged disclosure. His witness Bland does testify that he accompanied Lesser at the time Lesser conferred with Winkelmann, and he saw Lesser make a sketch in his discussion with Winkelmann. It does not appear that the sketch showed the present invention or what it showed. As he did not hear what was said, his testimony is of value only in establishing the fact of the conference, and not in establishing a disclosure of the invention in issue to Winkelmann at that time.

Winkelmann and Lesser are in direct conflict as to this alleged disclosure. They are in agreement as to the conference, but Winkelmann denies that Lesser disclosed the invention to him. The lower tribunals have considered the inherent probabilities of the case and have decided that Lesser made his alleged disclosure to Winkelmann. I am unable to agree with their conclusions. In the first place in order to award priority to Lesser they have found it necessary to discredit the testimony of both Winkelmann and his witness Moran regarding the model introduced in evidence as

Winkelmann's Exhibit 1. The testimony of Winkelmann and Moran is to the effect that Winkelmann constructed this model at home and showed it to Moran before Lesser's first interview with Winkelmann. This interview occurred on Lesser's second visit to the Singer establishment and Moran testifies that he had not seen Exhibit 1 when Lesser came to see him the first time, and this was the reason he did not attempt to make the attachment for Lesser, but that Winkelmann having shown him the model and told him he thought it would do the work, prior to Lesser's subsequent visit, he took Lesser's order on the subsequent visit. This is brought out clearly in Moran's answer to cross-question 67. This testimony is strongly corroborative of Winkelmann's testimony as to the existence of the model prior to Lesser's interview with Winkelmann. Moran is very positive that he would not have taken Lesser's order if he had not previously seen Winkelmann's model.

[3, 4] The model is a crude device, but it does disclose a plate having a curved edge and folding means so arranged relative thereto that the curved edge of the work is folded downwardly instead of upwardly. I see nothing improbable about Winkelmann's alleged work on the model following the previous inquiries of other people for a device which would do this work. It seems natural that a person occupying his position as a skilled mechanic who makes attachments for sewing machines and having had the problem suggested to him should have sought its solution, nor is it strange that he worked upon it at home. His company had taken no orders for the device, and he had not been authorized to spend any of the company's time on it. It is not believed that the testimony of Winkelmann and Moran relative to the model has been discredited or that it should be ignored. The subsequent development of the complete device within a few days after Lesser's first conference with Winkelmann is indicative that Winkelmann had previously given thought to the matter and was therefore able to make a successful attachment in a short time. Of course if Lesser actually disclosed the invention in its perfected form to Winkelmann at his first interview with him Winkelmann probably would have been able to make the device in this short time. But what was Lesser's disclosure to Winkelmann? No one except Lesser and Winkelmann are in position to know, and there may well be an honest difference of opinion between them as to which made the various suggestions to the other.

Perhaps the most persuasive evidence on this point is the sketch made by Lesser when under cross-examination, and his testimony relative thereto. This sketch has been introduced in evidence as Winkelmann's Exhibit 14. This sketch was made in response to X Q. 115. The question and answer read:

X Q. 115. Will you please reproduce for me a sketch similar to the one which you say you made for Mr. Winkelmann on your second visit to the Singer Company's place? A. I simple suggested a round or semi-round plate, which I mark X, laying down, at the time, a round chevron, suggesting to him the needle should strike in the corner of this plate where I have marked Y, which would allow the operator to use that as a guide to turn the article out, as I have designated—I mark with an arrow the direction in which the cloth was to travel. I also told him to put the folder at the place I mark Z.

On redirect examination, question 183 et seq., counsel for Lesser evidently tried to get Lesser to correct his previous testimony relative to the direction of movement of the work, but Lesser's answers do not indicate that he appreciated the fact that the arrow on his sketch was pointed in the wrong direction. It is obvious that the curved edge on the plate X in the sketch must, to function, engage the material before it is sewed. But Lesser has indicated it as engaging the material after it leaves the needle. Even assuming that the work moves in a direction opposite to that indicated by the arrow, the folder Z is not placed where it would cooperate with the curved edge of the plate X to form the fold, but is located beyond the point of sewing in the direction of feed. If the direction of feed is as shown by the arrow, the edge of the material is first folded by the folder alone, without the cooperation of the plate X, and is then sewed, the plate X can function if at all only after the sewing operation, which is subsequent to the folding operation. If the feed is in the reverse direction, the work is fed along the curved edge of the plate to the needle, and following the sewing of the supposedly folded edge said edge is presented to the folder.

[5] If Lesser could not give any better description of the invention than he did at the time of taking testimony, it is not seen how much credence can be given to his uncorroborated testimony of disclosure to Winkelmann. His disclosure on the witness stand is far short of the information possessed by Winkelmann before their conference on the matter, as evidenced by Winkelmann's model, Exhibit 1. To me it seems much more probable that Winkelmann, who was highly skilled in the art, developed the successful attachment from his own ideas rather than from Lesser's suggestions. In any event Lesser has failed to establish the fact that he disclosed the invention to Winkelmann or to any one else prior to Winkelmann's actual reduction to practice.

It is accordingly held that the invention originated with Winkelmann, and not with Lesser.

The decision of the Examiners in Chief is reversed, and priority of invention is awarded to Charles Winkelmann, the junior party.

YEAST MANUFACTURE.

*Messrs. Warfield & Watson* for the petitioner.

FENNING, *Assistant Commissioner:*

Petitioner requests that the case be remanded to the Primary Examiner with directions that it be accorded the benefit of the Nolan Act and that consideration thereof on the merits be renewed.

In his original oath applicant called himself a citizen of Hungary, but on May 20, 1922, he filed an additional oath executed March 9, 1922, to the effect that under the provisions of the Treaty of Trianon he had become a citizen of Rumania before he executed the original oath.

[1] Citizens of Hungary are entitled to the benefits of the Nolan Act; citizens of Rumania are not, and since the assignee derives his rights from the inventor it follows that if the inventor has no rights, the assignee also has none.

[2] It appears that the applicant filed the new oath in this case in order that he might not forfeit his rights as a Rumanian citizen. Without retracting his oath that he is a Rumanian citizen he now requests the benefits of the Nolan Act, which he can only obtain as a citizen of Hungary. He can not consistently claim the benefit of citizenship in both countries.

[3] The Court of Appeals of the District of Columbia in the case of *Seror and Hoyer* v. *Dick*, 331 O. G. 228, agreed with the Patent Office that Dick's verified representation in his application that he was a citizen of France constituted a prima facie showing of such citizenship which had not been overcome. To the same effect was the decision in the case of *Michelin* v. *Hayes Wheel Co.*, 300 F. R. 458. Without a clear showing we should not grant the benefits of a citizenship on which the courts will rely. Petitioner having sworn that he is a citizen of Rumania, and having had opportunity to correct the error, if any exists, he must abide by the results of his allegation as it stands.

The petition is denied.
